A NOTE TO USERS

Revisions and Modifications:

Table 90:—Consumer credit, selected holders.

The quarterly seasonally adjusted series have been revised from third quarter 1965 to date.

Table 108 and page S-8:—"Cheques cashed in clearing centres".

Table 108 has been expanded to provide seasonally adjusted data by province, major city and type of account. Series for individual Atlantic provinces may be obtained upon request. The series are now published in million dollars rather than in billion dollars.

Data in Table 108 and page S-8 have been adjusted by the X-11 variant of the United States Bureau of the Census Method II. Adjustments made for trading-day variation were derived from actual variations in the data.

Annual Subscription: $5.00 — Single copy: 50c.

This review and other publications of the Dominion Bureau of Statistics, including a free annotated catalogue of current publications may be ordered from Publications Distribution, Dominion Bureau of Statistics, Ottawa, Ont. or from the Queen's Printer, Ottawa, Canada, and remittances made payable to the Receiver General of Canada.

NATIONAL ACCOUNTS, INCOME AND EXPENDITURE THIRD QUARTER, 1967

Introductory Review

Gross National Product in the third quarter rose to a level of $61.9 billion, seasonally adjusted at annual rates, increasing by one half of one per cent from the previous quarter; with prices rising by somewhat less than 1 per cent, this represented a slight decrease in real terms. Excluding accrued net income of farm operators, the advance in Gross National Product in current dollars was nearly 1 per cent.

With the data now available, it is possible to suggest orders of magnitude for the entire year. If, for instance, there were no increase in the fourth quarter after allowance for seasonal variations, the gain from 1966 would be 6.4 per cent. Assuming a 1 per cent rise in the fourth quarter, the advance for the year would be 6.6 per cent.

The weakening forces of expansion, evident in the small volume growth of GNP in the two previous quarters, have given way to a pause in the third quarter. While increases in demand by persons and in residential construction continued strong and the trend of diminishing rates of accumulation in business inventories gave way to a substantially higher rate of accumulation, sizeable declines occurred in investment in plant and equipment, government expenditures on goods and services, and exports. With imports declining less than exports the current account deficit widened.

On the income side there were a second successive 2 per cent increase in labour income, a small gain in net corporate profits and a significant decline in accrued net income of farm operators. More than half of the relatively small increase in labour income came from higher average earnings as employment rose only slightly overall. The employment trend of the preceding two quarters continued, with the bulk of the gain occurring in service industries; employment in goods-producing industries showed little change.

In absolute terms, the largest increase in demand, $800 million seasonally adjusted at annual rates, came from consumer expenditure. Of this increase only about one-third represented a real gain as prices rose 1.4 per cent. Considerably influencing the total movement were those series measuring spending connected with EXPO. Investment in business inventories rose from the previous quarter by $700 million. About one-third of this increase related to automobiles, possibly in anticipation of strikes against the major U.S. producers and resultant shut-downs in Canada. The expansion in residential construction continued, adding $216 million to demand. This gain resulted from work on previous starts, as new starts declined from an annual rate of 198,000 in the second quarter to 178,000.

Investment in plant and equipment registered a second successive decline. The 8 per cent reduction, larger than the rate of decrease in the previous quarter, consisted of drops of $200 million in plant and $600 million in machinery and equipment; however, in real terms, the decrease in the latter item was less pronounced as the value series declined/in part because of the removal of the sales tax on production machinery last quarter. The rate of government expenditure on goods and services showed a decline of $600 million at annual rates, with about two-thirds occurring at the federal level.

More severe, in terms of its impact on total demand, was a $920 million reduction in the level of exports; this was concentrated in merchandise, as services actually increased by $120 million. Although merchandise imports also showed a decline, partly the result of reduced machinery and equipment investment, the merchandise balance shifted from a surplus of $344 million to a deficit of $424 million; the overall current account deficit widened by $220 million, as a $548 million improvement in non-merchandise transactions was insufficient to offset the swing in the merchandise account.

Price Movements[1]

In the third quarter, prices rose by less than 1 per cent, a lower rate of increase than in the last several quarters. The main price rise in the quarter occurred in consumer expenditure, which advanced by 1.4 per cent, slightly higher than in the second quarter; price changes in most of the other categories were lower than in recent quarters with construction showing a significantly lower rate of advance.

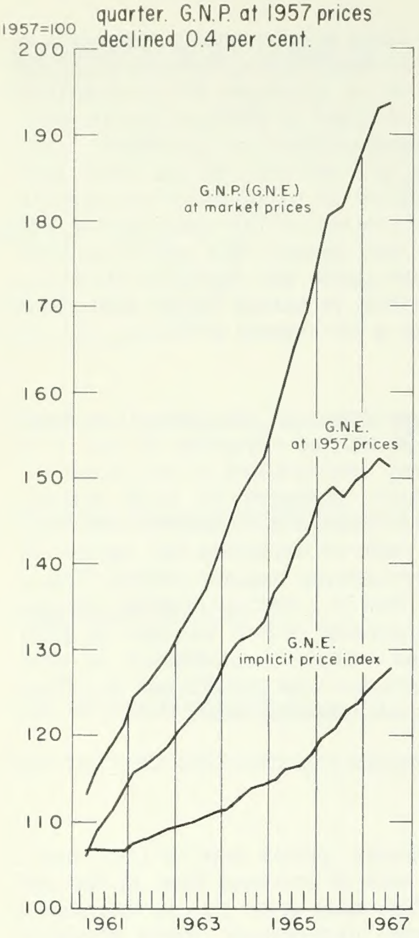
Within consumer expenditure durable goods and services showed less increase than for the second quarter. The surge in non-durable prices was largely due to the rise in seasonally adjusted food prices, while in services price rise was more broadly spread.

Food prices which had declined for three quarters turned sharply upwards this quarter, increasing a full 2.5 per cent on a seasonally adjusted basis. This was due mainly to increases in beef, dairy products, fresh fruits and vegetables and was somewhat offset by declining prices for eggs, poultry, and pork. Within the rest of non-durable goods, clothing and footwear advanced by 1.3 and 1.7 per cent while hardware and cosmetics fell. Drug prices fell after the removal of sales tax in September.

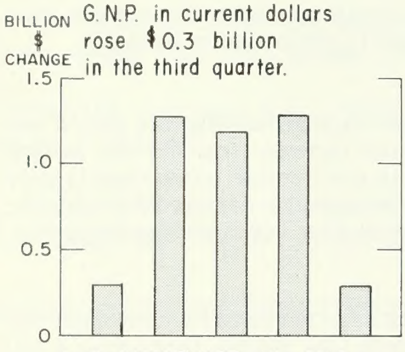
---

[1] See footnote[1] on page iii.

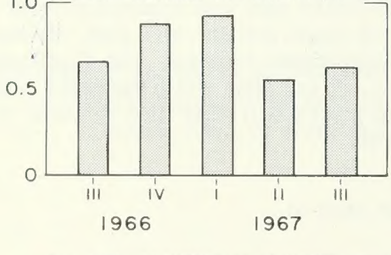
G.N.P. at current prices rose 0.5 per cent in the third quarter. G.N.P. at 1957 prices declined 0.4 per cent.



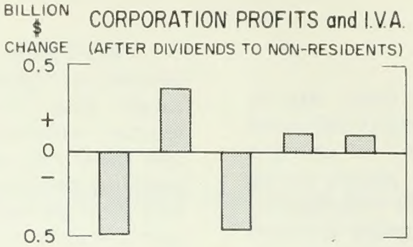
G.N.P. in current dollars rose $0.3 billion in the third quarter.



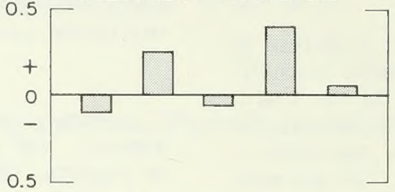
On the INCOME SIDE of the G.N.P. account Increases in LABOUR INCOME and MILITARY PAY



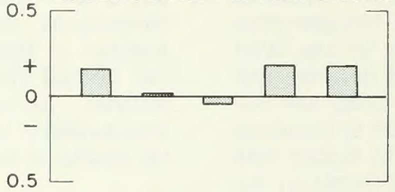
CORPORATION PROFITS and I.V.A. (AFTER DIVIDENDS TO NON-RESIDENTS)



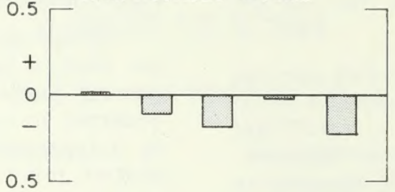
INVESTMENT INCOME and



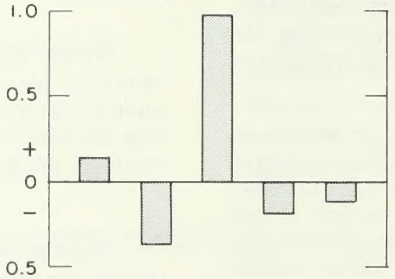
NON-CORPORATE BUSINESS INCOME



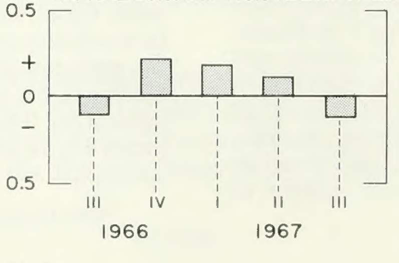
offset a drop in FARM ACCRUED INCOME



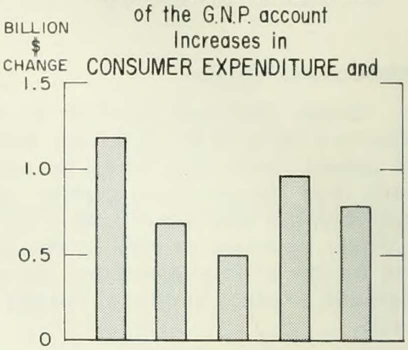
NET INDIRECT TAXES and



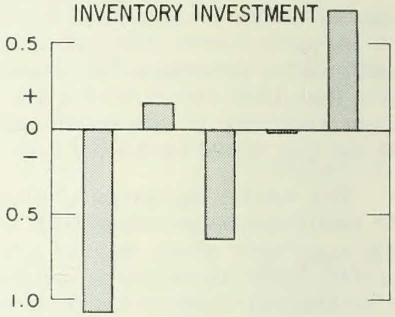
CAPITAL CONSUMPTION ALLOWANCES



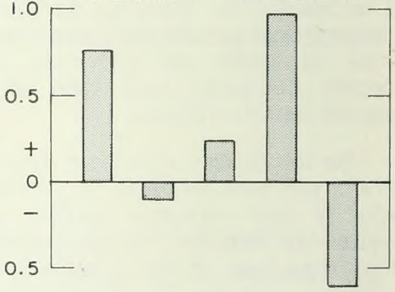
On the EXPENDITURE SIDE of the G.N.P. account Increases in CONSUMER EXPENDITURE and



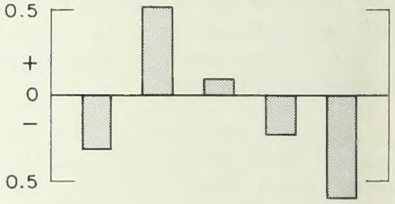
INVENTORY INVESTMENT



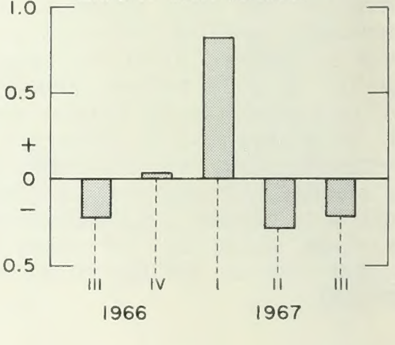
offset a drop in GOVERNMENT EXPENDITURE



FIXED CAPITAL FORMATION and



NET EXPORTS (EXPORTS MINUS IMPORTS)



ALL DATA SEASONALLY ADJUSTED, AT ANNUAL RATES.

The price index of household appliances, radios and televisions rose by 1.6 per cent and was the strongest factor in the price rise of durables. Car prices rose by half of one per cent on a seasonally adjusted basis.

Most service components showed considerable price increase. Education, miscellaneous services, medical care, and rents all rose by more than one per cent. Purchased transportation rose only moderately while the price of recreation increased by more than 3 per cent.

The price of business gross fixed capital formation declined 0.3 per cent, almost the same as in the previous quarter. This resulted from a decline in the price of machinery and equipment caused by removal of the federal sales tax on June 1st. If the effect of the tax removal were excluded, prices of machinery and equipment would have shown about a 0.4 per cent increase instead of the decline of 1.5 per cent. In construction, the rate of advance in prices has been considerably moderated, largely by lower wage increases.

Within merchandise exports, the category food, feed, beverages and tobacco registered a significant decline in price of over 3 per cent, mainly because of a sharp drop in the price of wheat. Most of the other categories increased by about one half of one per cent resulting in a slight increase in the overall price for merchandise exports.

Fixed Weight Price Indexes[1]
Percentage Change from the Preceding Quarter

(Based on seasonally adjusted data)

	1966			1967		
	II	III	IV	I	II	III
Personal expenditure	1.0	0.6	0.9	0.5	1.3	1.4
Non-durable goods	1.1	0.6	0.4	- 0.1	- 0.8	1.5
Durable goods	0.8	- 0.3	1.2	0.2	1.0	0.8
Total goods	1.1	0.4	0.6	- 0.1	0.9	1.3
Of which: Food	1.2	0.8	- 0.2	- 1.2	- 0.2	2.5
Non-food goods	0.9	0.2	1.1	0.6	1.5	0.6
Services, excluding net expenditure abroad	1.1	1.0	1.2	1.3	2.0	1.5
Government expenditure on goods and services	1.1	1.3	1.9	2.4	2.5	0.8
Business gross fixed capital formation	1.1	0.8	1.5	1.2	- 0.2	- 0.3
New residential construction	1.1	0.9	2.1	1.0	2.2	0.9
New non-residential construction	1.5	1.0	1.5	1.0	1.4	0.6
New machinery and equipment	0.7	0.5	1.4	1.4	- 2.7	- 1.5
Exports of goods and services	0.7	1.6	0.5	0.2	0.1	0.1
Gross available supply	1.0	0.9	1.1	0.8	1.0	0.8
Imports of goods and services[2]	0.5	0.4	1.1	- 0.4	0.2	0.7
Gross National Expenditure	1.2	1.1	1.1	1.1	1.3	0.8
(Implicit price index of Gross National Expenditure)	1.0	1.2	0.9	1.4	1.1	0.8

[1] Beginning with the current quarter the analysis of price movements is based on a new fixed weight price index. It is felt that this improves analysis. Previously the table summarizing percentage price change was based on implicit price indices derived from seasonally adjusted constant dollar aggregates. Implicit prices are affected by changes in current expenditure patterns as well as price so that often an adjustment for weighting shifts is required in order to obtain a true picture of price change. The new index is weighted with expenditure patterns for the year 1966. For the most part the prices used are the seasonally adjusted prices used to derive seasonally adjusted constant dollars. In addition, the seasonally adjusted price detail used for the government index has been substantially improved.

[2] Quarter-to-quarter changes in this component are not necessarily analytically significant.

The Components of Demand

Personal Expenditure on Consumer Goods and Services

Personal expenditure reached a level of $38.3 billion, seasonally adjusted at annual rates, an increase of some 2 per cent from the second quarter as compared with an increase of 2½ per cent in the previous quarter. This total includes the adjusting item "net expenditure abroad", which is a large negative as a result of the expenditures of non-residents coincident with EXPO 67 and centennial celebrations;[2] the impact of this net foreign spending is shown in the following table:

	Millions of dollars, seasonally adjusted at annual rates				
	1967			Change	
	1Q	2Q	3Q	1Q-2Q	2Q-3Q
Non-durables	17,740	18,408	18,820	668	412
Durables	4,168	4,440	4,568	272	128
Services (excluding NEA)	14,512	15,108	15,624	596	516
Total personal expenditure in Canada	**36,420**	**37,956**	**39,012**	**1,536**	**1,056**
Net expenditure abroad	68	- 492	- 756	- 560	- 264
Personal expenditure	**36,488**	**37,464**	**38,256**	**976**	**792**

Both durable and non-durable goods as well as services shared in the 2 per cent rise in personal expenditure with the largest increase occurring in durables. A substantial portion of the increase in total spending is attributable to expenditures connected with EXPO, although this cannot be fully evaluated in quantitative terms.

The majority of the components of the non-durable category showed increases from the second quarter, but the gains were generally smaller; however, some declines were registered. Expenditure on energy sources (fuel, electricity, gas) decreased by over 8 per cent after a 7 per cent rise last quarter. Household non-durables went from a gain of 3½ per cent to a decline of one half of one per cent, while tobacco declined fractionally after increasing by 4½ per cent previously. Total clothing expenditure rose by over 1 per cent as against a 6 per cent gain; women's clothing increased by 2½ per cent but men's clothing declined almost 1½ per cent. The food component rose by 2½ per cent, nearly all of which represented price increases. Expenditure on alcoholic beverages, and on gasoline oil and grease each rose by 1 per cent, while the auto parts and accessories series gained 2½ per cent.

The 3 per cent increase in durables was almost entirely concentrated in a 6 per cent gain in expenditures on new cars; the movements in all other components were virtually offsetting. The net value of used car purchases increased some 8½ per cent, with both purchases and trade-ins rising noticeably. Declines were registered in home furnishings (1½ per cent), furniture (almost 5 per cent), and jewellery (2½ per cent), while spending on appliances and radios rose by 1½ per cent.

All components contributed to the 3½ per cent rise in services inclusive of non-resident spending. Largest was the 14 per cent increase in recreation expenditure, but noteworthy also was a further 3½ per cent gain in purchased transportation after increases of 10½ per cent and 9½ per cent in the two preceding quarters. The user-operated transportation series increased by one half of one per cent, personal services by 2 per cent, and medical care and household operations each by 2½ per cent.

---

[2] Personal expenditure on consumer goods and services is a measure of all expenditures by Canadian residents, including those temporarily abroad. Since measures of the value of outlays on consumer goods and services in Canada are derived from sales made within the territorial boundaries of Canada, the values must be adjusted to include expenditures abroad by Canadian residents and to exclude outlays in Canada by non-residents. This adjustment is called **Net expenditure abroad.** Net expenditure abroad is composed of outlays on both commodities and services. As it is impossible to determine these elements in the net figures, the whole adjustment has traditionally been included with services. The item is generally small and does not significantly distort quarter-to-quarter comparisons of either aggregates or individual series. However, with the exceptional influx of tourists occurring in the second and third quarters of 1967 the adjustment to exclude purchases by non-residents has become large, distorting the analytical continuity of the Services series.

Miscellaneous services, which includes expenditures on hotel and motel accommodations, rose by 4 per cent. The shelter component, accounting for nearly 40 per cent of the value of services, increased by 2 per cent as compared with a gain of one half of one per cent in the previous quarter.

With personal disposable income increasing by less than 1 per cent — the result of a 1½ per cent increase in personal income and a 9½ per cent rise in personal direct taxation — and a 2 per cent gain in personal expenditure the level of personal savings declined by half a billion dollars.

Business Gross Fixed Capital Formation

Business gross fixed capital formation dropped by almost 5 per cent in the third quarter. The reduction of $596 million at annual rates occurred in plant and equipment, which fell by $204 and $608 million respectively. Partially offsetting the drop was a $216 million increase in outlays on housing.

Value of residential construction activity rose 9 per cent from the second quarter, to an annual rate of $2,576 million. Dwelling completions advanced 26,000 units to a seasonally adjusted annual rate of 162,900 units. This followed an increase of 19,300 units between the first and second quarters. However, dwelling starts, which reached a record level of 198,200 units in the second quarter, dropped to a seasonally adjusted annual rate of 178,400 in the summer quarter.

Business outlays on plant and equipment declined by 8 per cent in the third quarter. Spending on non-residential construction was about 4½ per cent lower at an annual rate of $4,464 million, with a pronounced decline in the building construction component. Spending on machinery and equipment was about 11½ per cent less at an annual rate of $4,740 million. Over half of the drop is estimated to have occurred in imports of producers' durable goods (other than transportation equipment). As noted in the previous report, the 6 per cent sales tax on production equipment which was in effect in April and May was removed on June 1st, thus accentuating the decline of the value series; the decrease in real terms was somewhat smaller.

Non-farm Business Inventories

The rate of investment in business inventories quickened in the third quarter of 1967. Seasonally adjusted estimates at annual rates show a stock increase of $712 million, whereas increases in the first and second quarters had been $176 million and $132 million respectively. Although inventory accumulation took place in all major industrial groups, almost half of the overall stock increase was in retail trade.

The following table shows the value of physical change in non-farm business inventories in the first three quarters of 1967 by industry:

Change in Non-farm Business Inventories

(Seasonally adjusted at annual rates)

	1967		
	1 Q	2 Q	3 Q
	millions of dollars		
Manufacturing	40	216	128
Durables	88	72	– 104
Non-durables	– 48	144	232
Wholesale	124	44	88
Retail	108	– 216	304
"Other" industries	– 96	88	192
Total	**176**	**132**	**712**

Manufacturing contributed about 20 per cent to the total investment in business inventories in the third quarter. The increase in stocks was the net result of opposite movements as between durables and non-durables, a $104 million liquidation in the former being more than offset by a substantial accumulation of $232 million in the latter. The bulk of this accumulation in the non-durable goods industries was due to a surge in the stocks of the paper industries and also to a sizeable increase in the stocks of the food and of the petroleum and coke producing industries. Among durables, there were declines in the stocks of the primary metal, metal fabricating and machinery industries.

The increase in manufacturing stocks occurred at all stages of production but was most marked in goods-in-process. The stock-to-shipments ratio, though below the level of the previous quarter, was higher than that of the average of recent years.

Retail trade was responsible for over 40 per cent of the total stock accumulation. The large increase in retailers' stocks in the third quarter was in marked contrast to the substantial liquidation which occurred in the second quarter. Although increases in the stocks of both durable and non-durable goods were widespread, the accumulation was most pronounced in durable goods, where the bulk of the increase was in motor vehicle stocks, possibly as a protection against a shortage in supply due to anticipated strikes; thus the stocks of automobile dealers that had been dropping in the last four quarters increased markedly.

Wholesalers' stocks rose moderately. Most of the increase was in durable goods lines and was concentrated in industrial, transportation, machinery equipment and supplies, and commercial, institutional and service equipment and supplies trades. Offsetting movements of non-durables exerted a moderating influence on the pace of accumulation of total wholesalers' stocks. The stock-to-sales ratio was below the ratio of the previous quarter.

Exports and Imports of Goods and Services

The deficit in Canada's external account, on a national accounts basis, moved from a seasonally adjusted annual rate of $824 million in the second quarter to $1,044 million in the third. The following table shows the change of $220 million resulted from a turn-around of $768 million (surplus to deficit) in merchandise trade swamping an improvement of $548 million in non-merchandise transactions.

Exports and Imports of Goods and Services

(Seasonally adjusted, at annual rates)

Year	Goods			Services			Current balance
	Exports	Imports	Net	Exports	Imports	Net	
	millions of dollars						
1966 – 1 Q	9,968	9,576	392	2,692	3,972	- 1,280	- 888
2 Q	10,072	9,944	128	2,748	4,052	- 1,304	- 1,176
3 Q	10,532	10,344	188	2,744	4,332	- 1,588	- 1,400
4 Q	10,732	10,544	188	2,804	4,356	- 1,552	- 1,364
1967 – 1 Q[1]	11,596	10,840	756	2,912	4,204	- 1,292	- 536
2 Q	11,664	11,320	344	3,400	4,568	- 1,168	- 824
3 Q	10,620	11,044	- 424	3,520	4,140	- 620	- 1,044
2 Q '67 to 3 Q '67, %	- 9.0	- 2.4		3.5	- 9.4		

[1] First quarter 1967 does not incorporate Balance of Payments revisions in DBS Catalogue No. 67-001.

The improvement in non-merchandise trade can be attributed to a large increase in EXPO-oriented tourist and travel receipts along with a sharp drop in some other payments such as official contributions, large payments of which were made in the second quarter.

After allowance for normal quarterly change between the second and third quarter, sales abroad were lower for wheat, fish, lumber, newsprint, wood pulp, aluminum, zinc, iron ore and scrap iron, natural gas, fertilizers and farm machinery. Sales were higher for copper and crude petroleum and unchanged for non-farm machinery, nickel and asbestos. Data on commodity imports are not available, but there are indications of a drop in machinery and equipment. By area, three quarters of the fall in merchandise exports occurred in markets other than the United States and the United Kingdom, while the decline in imports was confined to the United States.

Government Sector

Seasonally adjusted at annual rates, total expenditures of all governments combined (excluding inter-government transfers) declined by almost 2½ per cent during the quarter. Most of the decline was attributable to lower spending on goods and services; other categories of spending showed only small changes.

The decline in expenditures on goods and services occurred at both the federal and provincial-municipal levels of government. Federal non-defence outlays fell by about $400 million from the very high second quarter rate and reflected, in part, reduced outlays for international assistance. The drop in provincial-municipal spending was about half of the size of the decline in federal outlays.

Total revenues of all governments combined rose by almost 3 per cent in the quarter. Receipts from personal direct taxes rose sharply from an irregularly low second quarter rate when federal receipts were affected by a shift in the pattern of refunds. Small increases occurred in investment income and employer and employee contributions to social insurance. Offsetting this was a drop in indirect tax revenues at the federal level due to lower returns from customs import duties and excise taxes.

As a result of increasing revenues and declining expenditures, the government sector (including revenues of the Canada and Quebec Pension Plans of about $900 million in both second and third quarters) moved from a deficit, on a national accounts basis, of $780 million in the second quarter to a surplus of $296 million in the third quarter. Most of the improvement came at the federal level and was in large part due to irregular movements in the second quarter.

The Components of Income

Labour Income

In the third quarter of 1967, labour income rose by just under 2 per cent. This roughly equalled the rise in the second quarter of 1967, though it was less than the over 2½ per cent expansion noted throughout 1966 and in the first quarter of 1967. As in the second quarter, the lower rate of increase was mainly due to a levelling off in the incomes in the goods-producing industries while the service industries continued to expand at roughly the rate established in 1966 and the first half of 1967. There was a relatively small increase in employment that was mainly absorbed by the non-commercial segment of the economy: schools, hospitals, other non-profit institutions and governments.

In the goods-producing industries total labour income increased by less than 1 per cent. This was almost entirely accounted for by increased earnings since the employment totals showed little change. There were slight increases in employment in manufacturing and mining but these were more than offset by decreases in construction.

In manufacturing, a combination of increases in average weekly hours worked and in rates of pay resulted in a rise of nearly 2 per cent in average weekly earnings; with only a small increase in employment in the quarter, total payrolls rose by somewhat more than 2 per cent.

Mining had a 1 per cent increase in employment, mainly in fuels and non-metals, with little change in hours but an increase in average weekly earnings. Wages and salaries advanced 2½ per cent, roughly the rate of increase for the past year.

Construction payrolls declined for the second successive quarter. There was a 5 per cent decline in employment in the third quarter, but because of a 1 per cent increase in average weekly hours worked and some increases in hourly wages, the decline in payrolls was less pronounced than the decline in employment.

The service-producing industries absorbed most of the total increase in employment. Total wages and salaries in these industries increased by about 3 per cent, with transportation and other utilities, trade and finance increasing by about 2 per cent and service and governments by about 3½ per cent. Average weekly earnings rose by around 2 per cent over most of the service-producing industries, but employment gains were mainly concentrated in service and government.

Investment Income

During the third quarter of 1967, net corporation profits (before taxes and before dividends paid to non-residents) sustained the rise which commenced in the second quarter and advanced over 2 per cent to a level of $5 billion. From mid-1961 until the third quarter of 1965 net profits were on the uptrend, but a levelling began in the last quarter of 1965, and profits remained stable through the first half of 1966. Third quarter profits in 1966 dropped 7 per cent, but fourth quarter profits rebounded to previous high levels. A pronounced decline in the first quarter of 1967 has been followed by successive advances in the second and third quarters.

While there was a moderate rise in third quarter net corporation profits, there was an almost equally offsetting decline in corporate capital consumption allowances, with the result that on a gross basis corporation profits contributed very little strength to the movement in Gross National Product.

Expansion in net profit levels was noted in several industries — the mining industry experienced a rise of 17 per cent, utilities 47 per cent, retail 32 per cent, and finance 12 per cent, with wholesale trade rising a more moderate 2 per cent. Reverses occurred in the service industry, with a 23 per cent drop, and in the transportation storage and communication industry, where a strike was a factor. Profits of the manufacturing group held virtually steady at the aggregate level but divergent results were recorded within the group. Gains of over 15 per cent were scored in the food and beverage, textile, and non-metallic mineral industries. The electrical industry profits rose substantially, reflecting recovery from the strike-affected second quarter. Profits of the petroleum and coal industry were little changed, but declines of over 10 per cent occurred in the paper industry and in both the strike-bound metal and chemical industries.

Rent, interest and miscellaneous investment income rose by 1½ per cent from the level of the second quarter, on a seasonally adjusted basis. Profits of government enterprises were up by 3 per cent.

Non-farm Unincorporated Business

Net income of non-farm unincorporated business rose to $3,312 million, 5.6 per cent over the second quarter level of $3,136 million.

The greater share of the increase was reflected in retail trade, while the construction and service industries maintained, but at a lower rate, the increases recorded in the second quarter.

Accrued Net Income of Farm Operators

Accrued net income of farm operators from farm production dropped to $1,696 million, 12 per cent below the previous quarter. There were declines in both livestock and grain production with the latter due to much lower Canadian Wheat Board profits, reflecting the sharp decrease in exports during the quarter. Partially offsetting these declines was a substantial increase in federal dairy subsidies.

Production by Industry[3]

Seasonally adjusted real domestic product less agriculture increased by 0.9 per cent in the third quarter of 1967. The non-agricultural goods-producing industries rose by 1.2 per cent, while the service-producing industries increased by 0.6 per cent. This latest advance in total non-agricultural output followed a 1.2 per cent increase in the second quarter and a decline of 0.2 per cent in the first quarter.

Within the goods-producing industries, manufacturing, with a 1.0 per cent increase, contributed almost two fifths of the third quarter increase in total non-agricultural output. The increase in manufacturing came mainly from the manufacture of durables, which increased by 1.9 per cent, while the manufacture of non-durables rose by 0.3 per cent. The most significant change occurred within the transportation equipment group, which rose by 9 per cent, because of the motor vehicles and the motor vehicle parts and accessories components, which recorded advances of 11 and 14 per cent, respectively. Electrical apparatus and supplies also made a significant contribution to the third quarter increase in total non-agricultural output, partly because of recoveries from strike effects and increased production of auto radios.

Mining, which rose by 2.2 per cent, contributed nearly one sixth of the third quarter increase in total non-agricultural output. This rise was largely due to crude petroleum fuel mining, and can be linked to increased oil exports to the U.S.

Electric power and gas utilities advanced by 2.2 per cent, thus contributing more than one tenth of the third quarter increase in total non-agricultural output. Fishing and trapping rose by 10.9 per cent, because of a 13 per cent increase in fishing from a lower second quarter level.

Forestry was the only one of the non-agricultural goods-producing industries to have a dampening effect on the third quarter.

Construction was fractionally higher than its second quarter level. There was a major increase of 10½ per cent in residential construction, which was at a level higher than any quarter since the first quarter of 1964. During the third quarter of this year the construction industry continued to be affected by strikes, mainly in Ontario.

Within the service-producing industries, the community, recreation, business and personal service grouping, for the second successive quarter, recorded the second largest contribution to the quarterly increase in total non-agricultural output. This contribution, of about one-fourth, was the result of a 2.4 per cent expansion in the grouping. Although the community group made a significant contribution, because of continued advances in the education and health components, the major contributions came from personal and business services, both of which reflected the effects of EXPO and centennial celebrations.

Public administration and defence, with an increase of 2.4 per cent, contributed one eighth of the third quarter increase in total non-agricultural output.

Finance, insurance and real estate rose by 0.9 per cent, which was a contribution of more than one-tenth to the third quarter increase in total non-agricultural output.

The transportation, storage and communication grouping declined by 0.7 per cent. Within this grouping, a decrease of 1.4 per cent in transportation and a drop of 12.9 per cent in storage more than offset an increase of 3.2 per cent in communication. The tendency of EXPO and centennial celebrations to encourage travel was shown in passenger gains recorded for air transportation (5½ per cent), rail (5½ per cent), bus (8 per cent) and urban transit (1 per cent). Urban transit was affected by the Montreal transit strike. A strike in the shipping industry and a decreased demand for exports of grain were major contributors to the estimated decline of 29 per cent in the output of water freight shipping. Related declines occurred in grain elevators (down 17 per cent), stevedoring, railway freight transportation, and truck transportation. Communication rose by 3.2 per cent, because of increases in the postal and telephone services.

Within the trade grouping, retail trade declined by 0.9 per cent, while wholesale trade increased by 0.6 per cent. Within retail trade, most of the components registered decreases. Among the more significant of these were furniture and appliances (5 per cent), fuel dealers (15 per cent), clothing (3 per cent), and farm implement dealers (13 per cent). One of the few store-types of increase from the previous quarter was motor vehicle dealers, which rose by 2 per cent. This increase, which was the result of expanded sales in September, did not quite reach the record level which was achieved in the last quarter of 1965. Most of the components in wholesale trade fell, but two of those that rose were automotive parts and accessories (up 3 per cent), and clothing and furnishings (up 6 per cent). Of the components that fell, the most significant was construction materials and supplies, with a decrease of 4 per cent.

---

FIRST NINE MONTHS 1967

Introductory Review

For the first nine months of 1967, Gross National Product advanced 6½ per cent over the same period of the previous year, a considerably lower rate of increase than the nearly 11 per cent gain for the full year 1966. Prices rose by 4½ per cent, the same rate of advance as for 1966; consequently the gain in real terms was 2 per cent, reduced sharply from 6 per cent of the previous year.

Among categories of demand, only personal expenditure matched its 1966 rate of increase; all others showed substantially reduced rates of advance. Government expenditure at both the federal and provincial-municipal levels rose at a rate about one-third below that of 1966; the overall increase was 10½ per cent as against 16½. Both exports and imports grew at lesser rates, 13 per cent and 9 per cent respectively, substantially narrowing the current account deficit. Business gross fixed capital formation showed the most pronounced change, advancing only fractionally after a 14½ per cent increase for the year 1966; among its components, residential construction rose at a slightly higher rate, but non-residential construction slumped from an advance of 19½ per cent to a decline of 3 per cent, and machinery and equipment fell by almost as much — from a 16 per cent increase to one of 1½ per cent.

Labour income increased by 10 per cent as against the exceptionally high advance of 12½ per cent in 1966. Gross corporation profits increased by 1 per cent compared with a 3 per cent rise last year. Rent and interest income and the net income of non-farm unincorporated business rose at higher rates than in 1966.

Significantly affecting several components of both income and demand were EXPO and other centennial events; perhaps the most dramatic influence was in the tourist and travel account, which shifted from a small deficit in the first nine months of 1966 to a surplus of about $400 million in the comparable period this year.

Price Movements

The price component of Gross National Product rose 4½ per cent for the first three quarters of 1967 from the like period a year ago; this was approximately the same advance as for the full year of 1966. The price increase was broadly based.

Prices of goods and services purchased by persons were 3.4 per cent higher than in the first three quarters of 1966. Much of this was caused by a sharp increase in the price of services, which rose about twice as fast as the price of goods. All services showed strong price rises, but the most notable were those of rents, medical care, recreation and purchased transportation. In durable goods, the largest price rise was that of furniture. Other durables showed moderate price increases, with some important items, such as electric appliances and cars, advancing by less than 1 per cent. The 2.2 per cent price rise in non-durables was entirely due to rises in the non-food items.

Prices associated with business gross fixed capital formation rose by 3.4 per cent. Within this category the price increase for machinery and equipment was just over 1 per cent. In residential and non-residential construction prices were up by 5.9 and 4.9 per cent, both labour and material costs being responsible for the increases; labour cost rose by about 10 per cent and material cost advanced between 1 and 4 per cent.

Within exports the price of the merchandise component declined slightly, largely because of a decline in the price of wheat.

Personal Expenditure

The rate of increase for personal expenditure for the first three quarters of 1967 was virtually the same as for the full year 1966 both in current dollars, 8½ per cent, and in real terms, 5 per cent. Of the main categories durables showed the largest change in the rate of increase compared with last year, 5½ per cent as against 4 per cent; a large portion of the increase was due to a 4½ per cent rise in automobile purchases which showed no change in 1966. The 10 per cent rise in non-durables is somewhat overstated because of the treatment of net expenditure abroad, while the 8 per cent increase in services is somewhat understated.[4]

Gross national expenditure implicit price			4.5

---

[1] The prices used are averages obtained from a new fixed weight price index and they are not used in the derivation of volume estimates. For further information see footnote [1] on page iii.

The following table shows the pattern of increases in consumer expenditure in the first three quarters of the year 1967 compared with the same period of 1966 in relation to the changes between the full year 1966 from 1965.

	Per cent change in year 1965 to year 1966	Per cent change in 3 quarters 1966 to 3 quarters 1967
Total non-durable goods	+ 9.6	+ 9.8
Food	+ 7.1	+ 6.5
Tobacco	+ 6.2	+ 6.0
Clothing	+ 5.6	+ 7.8
Other	+ 15.7	+ 16.1
Total durable goods	+ 4.2	+ 5.7
Autos, new and used	—	+ 4.3
Household durables	+ 9.4	+ 6.9
Other	+ 7.2	+ 8.8
Total all goods	+ 8.5	+ 9.0
Total services excluding NEA	+ 8.9	+ 11.7
Total services including NEA	+ 8.9	+ 7.8
Total consumer expenditure	+ 8.7	+ 8.5

Business Gross Fixed Capital Formation

Business spending on fixed capital was practically unchanged from the three quarters of 1966. This was in line with spending plans reported at the end of 1966, but well below the 3 per cent increase for the full year anticipated in the mid-year survey of investment plans. While spending on housing was up by 3½ per cent, and on machinery and equipment by 1½ per cent, non-residential construction was down by about 3 per cent. In contrast to 1966, when housing outlays fell off in the second half of the year while plant and equipment outlays climbed in three quarters — housing spending increased in both the second and third quarters of 1967, while plant and equipment spending dropped from the first to second, and second to third quarters.

Housing starts have recovered significantly from the 1966 level, totalling 121,271 units in the first nine months of the year, up from 94,968 units in the year before. Two thirds of this increase was in rental dwellings.

A major program of direct CMHC loans was undertaken in the spring rather than in the fall which has been the timing of such programs for a number of years and there was a very significant injection of private mortgage funds in March. These two developments resulted in extremely high levels of housing starts in the second and third quarters of the year and helped to account for the significant increase in new residential investment in these periods.

Completions in nine months in 1967 were 103,155, down from 123,164 a year earlier. This can be attributed to the low level of units under construction at the beginning of 1967 and low first quarter starts. High second and third quarters for starts raised recent levels of completions.

Non-farm Business Inventories

In the first nine months of 1967 business inventory investment increased by $327 million compared with a $729 million increase in the same period of 1966. All industry groups showed a lower rate of investment in 1967. In contrast to the first nine months of 1966, when there was a balanced accumulation of both durables and non-durables, in 1967 there was more emphasis on non-durables.

Exports and Imports of Goods and Services

During the first nine months of the year the deficit on current account with non-residents, on a national accounts basis, narrowed to $478 million from $791 million in the same period of the previous year. The improvement of $313 million came about almost wholly from a change of $306 million in the deficit on non-merchandise trade.

The main element in the improvement in non-merchandise trade was the turn-around in the tourist and travel account from a deficit of $32 million in 1966 to a surplus of $383 million in the first nine months of 1967. A smaller deficit on freight and shipping transactions also contributed.

The overall stability of the merchandise surplus conceals a shift in the balance of trade with various countries. A larger surplus with the United Kingdom and the rest of the Sterling Area and a smaller deficit with the United States offset smaller surpluses with the OECD countries in Europe and with the rest of the world.

Automotive products accounted for over 70 per cent of the increase in merchandise exports and over 60 per cent of the gain in merchandise imports.

Exports and Imports of Goods and Services

(Not seasonally adjusted)

	Goods			Services

Per cent change	10.8	11.0		20.3	3.8		

---

[1] First quarter 1967 does not incorporate Balance of Payments revisions in DBS Catalogue No. 67-001.

The Government Sector

In the first nine months of 1967, total spending of all governments combined (excluding inter-government transfers) increased by $1,908 million, 14 per cent higher than the same period of 1966.

Outlays on goods and services increased by $856 million in the first nine months of 1967. Increases occurred at all levels of government and were in general the result of higher wage and salary payments.

Transfer payments to persons also increased by over $850 million in 1967. Over half of the increase was at the provincial-municipal level and was caused by larger grants to hospitals and educational and other institutions. Higher federal transfer payments reflected increased old age security payments, due to the introduction of the guaranteed minimum monthly income supplement to old age security recipients and to a further lowering of the age requirement for the pensions.

Total revenues of all governments combined increased by $1,702 million, about 12½ per cent higher in 1967 compared with the same period of 1966. Most of the increase resulted from higher receipts from personal direct and indirect taxes.

Revenue from personal direct taxes rose by $761 million in the period. The rise was greatest at the federal level and was associated with higher rates, introduced in June 1966, and the doubling of the maximum old age security tax on personal income imposed at the beginning of 1967.

A rise of $400 million in indirect tax revenue at the provincial-municipal level accounted for most of the gain in this component and reflected higher retail sales tax rates as well as increased property tax rates. At the federal level, the increase was $127 million. The sales tax rate was raised to 12 per cent from 11 per cent on January 1, 1967, while the tax on production machinery and equipment was lowered and then eliminated.

With expenditure increasing more rapidly than revenue, the government sector moved from a surplus, on a national accounts basis, of $146 million in the first nine months of 1966 to a deficit of $60 million in the same period of 1967. At the federal level, a deficit of $395 million was registered, compared with a surplus of $7 million in 1966. Offsetting the federal movement to some extent was an increased surplus in the Canada and Quebec Pension Plans of $174 million and a slight narrowing in the deficit at the provincial-municipal level.

The Components of Income

Labour Income

In the first 9 months of 1967 labour income was 10 per cent higher than in the equivalent period of 1966. There was some employment increase, primarily in the service-producing industries, but the greater part of the rise in labour income was caused by gains in average weekly earnings.

In the goods-producing industries labour income was 6½ per cent higher than in the first three quarters of 1966. With employment unchanged and a decline of about 1½ per cent in average weekly hours worked, the rise in labour income resulted entirely from higher wage and salary rates.

Partly because of EXPO and other centennial celebrations, labour income in the service-producing industries rose by 12½ per cent, nearly twice the rate for the goods-producing industries. This was a reversal from the previous year, when labour income was advancing more rapidly in the latter industries. Within the service-producing industries the greatest payroll increases were noted in transportation and public utilities, and service and government, all of which rose by nearly 14 per cent.

Investment Income

Net corporation profits (before taxes and before dividends paid to non-residents) for the first three quarters of 1967 fell nearly 4 per cent below the level of the corresponding period of 1966, while corporate capital consumption allowances for the same period climbed about 9 per cent. On a gross basis corporation profits rose slightly over 1 per cent.

On an industry basis, for the first three quarters of 1967 as compared to 1966, net profits slipped in the mining industry by 8 per cent, manufacturing, 8 per cent, transportation, storage, and communication, 14 per cent, and wholesale trade, 7 per cent. Profit levels mounted substantially in the utility and service industries, each with rises in excess of 20 per cent, whereas gains in retail and finance were somewhat smaller. Within the manufacturing group, varying results were recorded. Declines of 10 per cent or over occurred in the textiles, wood, paper, electrical, non-metallic mineral, and chemical industries, while a less pronounced edging down was experienced in the food and beverage and metal industries. Advances occurred in the rubber, printing, and petroleum and coal industries.

Rent, interest and miscellaneous investment income for the first three quarters of 1967 increased by 12½ per cent over the corresponding period of 1966. Profits of government enterprises rose by 14 per cent.

Accrued Net Income of Farm Operators

Accrued net income of farm operators declined sharply to $1,586 million, 19 per cent below the level reached in the same period in 1966.

The change in the value of grain production was almost wholly responsible for the decline, as the value of the 1967 crop is estimated to be $1,243 million, 20½ per cent below the record level of $1,564 million reached in 1966.

Livestock production increased only marginally. Cash income from other farm products rose with higher receipts from the sale of dairy products (including dairy subsidies), tobacco and vegetables. Offsetting these increases were higher operating expenses.

Net Income of Non-farm Unincorporated Business

Over the first nine months of 1967, net income of non-farm unincorporated business was over 8 per cent higher than the corresponding period last year. The major gains were made in net income of the service industries, reflecting in part the effect of EXPO, and retail trade.

Production by Industry

Non-agricultural real domestic product rose by 2.8 per cent in the first nine months of this year over the first nine months of 1966, on a seasonally unadjusted basis. This increase is in sharp contrast to the average rate of growth of 4.8 per cent in the 1946-66 period.

OUR FORCE (More detail in Table 19)

EMPLOYMENT AND LABOUR FORCE WERE HIGHER IN NOVEMBER, WHILE UNEMPLOYMENT SHOWED A DECLINE. UNEMPLOYMENT 4.3 PER CENT OF THE LABOUR FORCE.

	total labour force	total employed	employed non-agriculture	unemployed	unemployment rate	not in the labour force
	thousands				per cent	thousands

---

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary dence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census Canada, 1961, Catalogue Number 12-506. [2] Includes logging, fishing, trapping and hunting. [3] Includes mechanical and construction. [4] Includes a small number in -specified occupations. [5] Does not include students entering Canada on students' visas. [6] Includes also retired persons, elderly dependents, fiancés or fiancées d other unspecified persons not intending to enter the labour force. **Source: Quarterly Bulletin, Department of Manpower and Immigration.**

---

[1] Includes change in farm inventories. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for withdrawals of grain from farm stocks and the change in livestock items. Because of arbitrary elements, too precise an interpretation should not be given to the series. [2] Includes residual error of estimate. **Source: at bottom of Table 12.**

---

[1] Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. [2] The labour force as a percentage of the population 14 years of age and over. [3] The unemployed as a percentage of the labour force. **Source: Labour Force Bulletin, (71-001), D.B.S.**

[1] See footnote 1, table 19. Labour force obtained as the sum of employed and unemployed from tables 21 and 23. [2] Canada totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page S-1. These differences are small and are due to a statistical discrepancy. **Source: The Labour Force, (71-001) D.B.S.**

[1] In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage is not included. [2] The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; the total, however, includes all work stoppages. The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately; should strikes occur in these industries, they also will be shown in the total. [3] Includes miscellaneous manufacturing industries. [4] Includes also publishing and allied industries. [5] Includes also the storage and communication industries. **Source: Labour Gazette, Department of Labour.**

*Revised monthly data will be available later.

[1] The data in Tables 28 to 35 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] Excludes agriculture, fishing, trapping and public administration and defence. [3] Includes storage, electric power, gas and water utilities. [4] Excludes domestic service. **Source: Employment and Average Weekly Wages and Salaries, (72-002), D.B.S.**

[1] See footnotes 1 and 2 and source in Table 28. [2] Employment indexes in total manufacturing and in its total durable and non-durable components are given in Table 28. [3] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. [4] Except machinery and transportation equipment industries.

Table 31: average weekly wages and salaries,[1] by industrial division, based on the 1960 standard industrial classification-(dollars)

monthly averages or months	industrial composite	forestry	mining, including milling	manufacturing			construction	transportation, communication and other utilities	trade		finance, insurance and real estate	service

[1] The data for the current year are subject to revision. [2] Includes gold. [3] Consists of general wholesale index less animal products and vegetable products component groups. [4] Consists of iron products and non-ferrous metals products component groups less gold. [5] These two series comprise the general wholesale index. [6] Excludes gold.

---

[1] Monthly shipments represent an estimated projection of the latest available census of manufacturer's values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D. B. S.**

Table 41: manufacturing inventories[1], by industry, based on the 1960 standard industrial classification (million dollars)

end of year or month	total inventories owned	non-durable goods	durable goods	food and beverage	tobacco products	rubber	leather	textile	knitting mills	clothing	wood

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. [2] Total manufacturing inventory owned by manufacturers including warehouse stocks. [3] Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. [4] End of period. Annual figures for inventories and unfilled orders are end of December values. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D. B. S.**

[1] Tax-paid withdrawals of tobacco products for consumption in Canada, as indicated by the sale of excise revenue stamps. [2] Includes smoking and chewing tobacco. [3] Includes smoking, chewing and twist tobacco. [4] Stocks of redried domestic and imported leaf at end of quarter. [5] The production of beer is shown in thousand barrels of 25 gallons each. [6] Includes bottling of imported liquors. Excludes rebottling and intra-industry transfers. [7] End of period; spirit stock balance remaining in bond for all Canada plus distillery stock in process of being manufactured. **Sources: Quarterly Stocks and Consumption of Unmanufactured Tobacco (32-014), D. B. S.; and Department of National Revenue.**

---

[1] Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. [2] 100 cu. ft. of solid wood; pulpwood produced for domestic use and excluding exports. [3] Customs exports. [4] Mill shipments destined for export. **Sources: Pulpwood Production (25-001), Trade of Canada, Exports (65-004), D. B. S; Bulletins of Canadian Pulp and Paper Association and Newsprint Association of Canada.**

---

[1] Data on shipments relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [2] Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. [3] Includes appliances and utensils. Note: Some groupings are not entirely comparable to year 1964 due to change in classifications but in general the differences are minimal. [4] Excluding shipments for re-processing at maker's own plant. **Source: Primary Iron and Steel (41-001), D. B. S.**

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. [1] Includes crude oil, condensate and pentanes plus. [2] Deliveries to refineries and exports do not add to total new supply due to losses, other uses and inventory changes. [3] Gross new production by field and processing plants less field flared and waste, Canadian sources only. [4] By gas utilities, Canadian sources only. **Sources: Crude Petroleum and Natural Gas Production (26-006) and Gas Utilities (55-002), D. B. S.**

---

[1] Barrels of 35 Canadian gallons. [2] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [3] Refinery roduction (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [4] Includes deliveries of butane comtingled in the crude stream in Saskatchewan and Alberta. [5] Includes inventories at end of period being held at gas plants and in storage caverns. [6] Includes stove il, kerosene and tractor fuel. [7] Includes aviation gasoline and aviation turbo fuel. [8] Due to conceptual changes, the stock and sales series are not available on a omparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. [9] Includes petro-chemical feed stocks, naphtha speciales, coke, lubricating oil and grease, still gas and other products. **Source: Refined Petroleum Products (45-004), D. B. S.**

Note: Components may not add to totals due to rounding differences. [1]The data are collected for 1,400 municipalities and individual figures are available on request. [2]Historical data back to 1920 are available in "Historical Monthly Statistics" Catalogue No. 11-503, occasional. Starting with January 1966, the number of municipalities has been reduced to 56 following the annexation of the town of Riverside to the city of Windsor. **Source: Building Permits (64-001), D.B.S.**

---

[1]The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. **Source: Building Permits (64-001), D.B.S.**

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage nside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan reas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. [2] End of period. **Source: New Residential Construction (64-002), D. B. S.**

Note: Components may not add to totals due to rounding. [1] The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. [2] Excluding trucks. [3] The total value of all machines shown in this table is greater than the value shown for farm machinery in Table 87 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. **Source: Farm Implement and Equipment Sales (63-009), D.B.S.**

---

[1] These indexes are available for January, April and August only. [2] Average rates of cash wages paid per month to male hired help on farms. They reflect the rage of the wages paid to all male farm help regardless of age and skill. Data are available for January, May and August only. [3] Exclusive of Newfoundland. stern grain prices used in the construction of the Index prior to August 1, 1965 are final prices. From August 1, 1965 to date, the western grain prices used in the ex are initial prices only for wheat, oats and barley. [4] Barley No. 1 feed; hogs grade "B" alive. [5] Price of 100 lbs. good steer as a percentage of the price of lbs. live hog, grade B. [6] Price of 100 lbs. good steer as a percentage of the price of 100 lbs. good lamb. [7] Quotations refer to steers of all weights. [8] Grade 1" hogs. **Sources: Price Index Numbers of Commodities and Services Used by Farmers (62-004); Farm Wages in Canada (21-002) Occasional; Coarse Grains arterly (22-001), D.B.S. and Livestock and Meat Trade Report, Dept. of Agriculture.**

---

[1] Department store stocks at end of period at selling value. The series on "total sales, all departments" is a revised series based on the results of the 1961 Census of Merchandising and Service Establishments, (see also column 5, Table 85). The departmental breakdown for the months prior to January 1967 has not been adjusted to the new basis. The stock series at the total level and by component for the period prior to 1967 are based on the 1951 Census. **Source: Department Store Sales and Stocks (63-002), D.B.S.**

---

*Credit extended mainly to individuals; includes unidentifiable amounts of credit extended for non-consumer purposes; excludes certain forms, mainly service credit extended by doctors, dentists, lawyers, pawnbrokers, travel companies, restaurants and personal credit for which no statistics are available. [1]Conditional sales agreements held in connection with the financing of retail purchases of consumers' goods and repaid in instalments. [2]Companies licensed under the Small Loans Act and affiliated compagnies engaged in making personal loans. [3]Cash loans with no conditional sales contract but usually repaid in instalments. [4]Personal oans other than those fully secured by marketable bonds and stocks and other than home improvement loans. [5]Loans other than secured loans and mortgage loans. Figures for dates other than year-end are estimated on the basis of loans made by sixteen companies. [7]Sum of instalment credit of clothing, hardware and jewellery stores, fuel dealers and "all other trades" in Table 89. [8]Sum of charge accounts of clothing, hardware, independent grocery and combination stores, jewellery and general stores, fuel dealers, garages and filling stations and "all other trades" in Table 89. [9]Amount owing to oil companies ex commercial accounts. [10]Excludes mortgage loans; data available yearly only. [11]The data for Quebec savings banks loans and motor vehicle dealers are not seasonally adjusted as no seasonality is present; these series are repeated in the unadjusted form. **Sources: Credit Statistics (61-004), D.B.S.; Bank of Canada, Dept. of Insurance, Dept. of Finance and Dept. of Agriculture.**

[1] Monthly averages for 1965 and 1966 may differ from the averages of the monthly data due to revisions which cannot be allocated by months. [2] Data in this table refer to class 1 and class 2 carriers which are railways with gross annual operating revenues of $500,000 or over. Includes operations of United States railways operating in Canada but excludes operations of Canadian railways in the United States. [3] Includes traffic interchanged between Canadian railways. **Sources: Railway Operating Statistics (52-003) monthly, and (52-206) annual, D. B. S.**

[1] Includes Class I and Class II carriers only. These are trucking firms having $100,000 or more gross annual operating revenues. [2] Includes Class I carriers only. These are carriers having $100,000 or more gross annual revenues primarily from inter-city and rural bus operations. Regular and chartered services are included. Revised figures to December 1963 only. [3] Includes Class I carriers only. These are carriers having $100,000 or more gross annual revenues primarily from urban transit operations. Data are totals for motor bus, trolley coach, street car, subway and chartered services. Revised figures to December 1963 only. **Sources: Motor Carriers-Freight, Quarterly (53-005), Passenger Bus Statistics (53-002) monthly, and Urban Transit (53-003) monthly, D. B. S.**

[1] Monthly averages for years 1965 and 1966 differ from the averages of the monthly data due to revisions which cannot be allocated by months. [2] Includes heduled and non-scheduled carriers, groups I to IV. These groups cover all air carriers with gross operating revenues of over $60, 000 annually prior to January, '64 and over $100, 000 annually since. [3] United States and other foreign carriers. Excludes in transit passengers. [4] Cargo includes air freight and express but cludes mail and excess baggage. [5] Data prior to 1964 do not include bulk transportation. Because of survey limitations, data after January 1, 1964 refer only to rcraft having a minimum authorized take-off weight on wheels in excess of 18, 000 lbs. **Source: Civil Aviation (51-001), D. B. S.**

---

[1]The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does not include failures, sales or seizures carried out under other legislation. The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, Prairie provinces and British Columbia from the total. [2]In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. **Source: Commercial Failures (61-002) Quarterly, D.B.S.** *167,333 **258,935 ***108,631

---

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are aver-ges of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Mainly deposits of foreign banks. [3] Capital, rest fund and ndivided profits as at the latest fiscal year-end. [4] Including issues payable in foreign currency. [5] Securities purchased direct from issuer with a term of less than e year at time of issue are classified as loans. [6] Excluding Canadian day to day loans. [7] Loans to grain dealers and exporters. [8] Loans to finance purchase of anada Savings Bonds at time of issue. [9] Total of foreign funds, short term foreign investments and other foreign currency assets less foreign currency liabilities. Including loans to instalment finance companies. **Source: Statistical Summary of Bank of Canada.**

---

[1] Excluding revivals, increases, dividend additions, reinsurance acquired, credit insurance and pension bonds without insurance. Value totals are estimates jected from the sales reported by 34 companies operating in Canada representing 82% of new ordinary and 83% of new group contracts. [2] The monthly Canada ls for 1964 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. Neither the thly figures for 1964 nor the monthly averages for 1964 have been revised to agree with the Canada total. [3] Total new settled-for ordinary sales in Canada. der new or amended contracts. **Source: Monthly Survey of Life Insurance Sales in Canada, Life Insurance Agency Management Association, Hartford, necticut, U.S.A.**

---

[1] The definition of profits before taxes is based mainly on the accounting definition used by corporations. However, depletion charges are added back to net ts while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all panies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by sample of all companies incorporated in ida (excluding government-owned companies). [2] As is evident from the above footnote, the data reporting unit is the company; the data are therefore not entirely parable with data where the establishment is the reporting unit. [3] Includes also the furniture and furnishings industry. [4] Includes the primary metal, the metal cating, the machinery and the transportation equipment industries. [5] Includes tobacco products, leather and miscellaneous manufacturing industries. [6] Includes storage and communication industries. [7] Includes agriculture, forestry, fishing and construction. **Source: Corporation Profits (61-003), D. B. S.**

---

[1] The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. [2] Stocks included in the mining index are for producing mines. [3] Combines the industrials, utilities and finance common stocks. [4] Stocks included in industrial mines are for companies whose operations include smelting and refining. [5] The headings for "base metals" and "industrial mines" are not found in the Standard Industrial Classification. [6] Includes also the machinery industries (except electrical machinery) and the transportation equipment industries. **Source: Prices and Price Indexes (62-002),** D.B.S.

---

[1]This statement does not include any receipts other than regular budgetary revenues. Excluded for example, are all receipts arising from payments of loans dvances, or from accumulations on annuity, pension and insurance funds. [2]For comparative purposes figures may differ from those previously reported to reflect ges in accounting during 1967-68. Figures are rounded and may not add to totals. [3]March includes supplementary payments arising from the closing of the unts.

A NOTE TO USERS

Revisions and modifications:

Table 105: Bank of Canada.

Certain series pertaining to assets and liabilities have been added to provide more information. Under *assets,* data are now published for: Government of Canada direct and guaranteed securities 3 to 5 years and 5 to 10 years; bankers' acceptances; cheques on other banks; net amount of Government of Canada items in process of settlement and accrued interest on investments. Under *liabilities,* the additional series are Government of Canada enterprises deposits and Bank of Canada cheques outstanding.

Table 106: Canadian Chartered Banks.

The table has been extended to include: debentures issued and outstanding; accumulated appropriations for losses and other residential mortgages.

For certain items, revisions have been effected back to July 1966.

Table 112: Security Issues and Retirements.

Starting with this issue, a more elaborate breakdown for some series is provided. Provincial and municipal governments, corporations, other bonds and debentures, preferred and common stocks will show, respectively, gross new issues delivered, retirements and net new issues.

Annual Subscription: $5.00 — Single copy: 50c.

This review and other publications of the Dominion Bureau of Statistics, including a free annotated catalogue of current publications may be ordered from Publications Distribution, Dominion Bureau of Statistics, Ottawa, Ont. or from the Queen's Printer, Ottawa, Canada, and remittances made payable to the Receiver General of Canada.

ROGER DUHAMEL, F.R.S.C., Queen's Printer and Controller of Stationery, Ottawa, 1968

RECENT DEVELOPMENTS IN THE WORK OF THE DOMINION BUREAU OF STATISTICS[1]

This note follows the general pattern of previous years in describing new projects initiated in the DBS and in reporting significant stages of existing projects. Emphasis this past year has been on improving the timeliness of statistics to satisfy contemporary demand and on planning to take advantage of up-to-date electronic data-processing systems and programming expertise.

The Bureau is striving to reduce the time lag of statistical releases for DBS series. As a start, a number of key economic indicators have been selected for significant gains by the end of the present fiscal year. These include employment and payrolls, imports and exports, retail trade, selected commodity data, and the Index of Industrial Production.

A new storage and retrieval system is now being developed for the time series data bank. This represents the first phase of a large system now being designed in the Bureau with the assistance and cooperation of the Economic Council of Canada and the Bank of Canada. Use of the data bank is at present limited by the inadequacy of existing programs for handling large volumes of data.

Increased emphasis is being given to three closely related fields: prices, output and productivity. First will be developed a framework for fully-integrated statistics in these fields, including consistency in concepts, basic component detail and aggregates appropriate for analysis and policy decisions, and priorities for development and improvement. Steps are being taken to update and broaden the primary data base in areas where improvement and expansion are urgently required.

A new section of the Bureau, "General Survey Systems Staff", is charged with the development and implementation of the computer-based geographic coding system referred to in last year's note. The system specifications have now been developed and programming partially completed for the geographic location identifiers in urban areas. Development of the necessary large computer-stored directories has begun. Arrangements have also been made to develop a computer program capable of accepting addresses in non-standard format, and of translating them into the standard format. This project will greatly enlarge the information available by small areas and custom-made aggregations of areas.

A guide to small area data available in DBS, now in preparation, will provide sources and notes on coverage and continuity. Programs are under way to produce experimental estimates of unemployment and money incomes for sub-provincial areas. A study of growth patterns in manufacturing employment by counties, which analyses employment changes in the periods 1949-59 and 1961-65, is nearing completion. Also under way is experimental work on annual population estimates, initially for counties and census divisions and later possibly for census subdivisions. Testing of the initial results and refinements of methodology are in progress. Estimates for census subdivisions, if feasible, would not be published as such but would be aggregated to meet the need for statistics relating to areas having boundaries which cut across county boundaries.

The immediate objective of a new company establishment integration program is to link financial and production statistics within a more consistent and detailed framework. Production inputs and outputs such as sales, payrolls, materials used and inventories have been collected for many years mainly on an establishment basis. But comprehensive financial statements containing the same items of information have become available to DBS much more recently, principally on a company basis. A sample of establishment and company returns will be studied to determine the reporting differences for the same items of information, the reasons for these differences, and the methods for eliminating them, where appropriate. If warranted, a new reporting system will be developed to ensure that data which apply to the different levels of the organization will be related, or integrated in a consistent fashion. An integral part of the project is experimentation with a questionnaire designed to link company financial statements with a wide range of establishment data.

On behalf of the Department of Manpower and Immigration, DBS is developing a monthly survey of job vacancies, to tell us "where the jobs are" — a three-month moving average of vacancies by occupational title and job location. Large manufacturing firms are being surveyed immediately. Other sectors of the economy will be introduced periodically to attain full coverage by the end of 1968.

A Canadian Standard Classification and a Dictionary of Occupations is under development in co-operation with the Department of Manpower and Immigration. The classification structure is meant to be used in the 1971 Census.

Also, in response to a demand from land-use planners and others interested in detailed classification of economic activity for local areas, the Standard Industrial Classification for non-manufacturing industries is being expanded, adding a finer level of detail.

A revised reference document on the National Accounts now under way will present revised statistics incorporating 1961 census benchmarks.

---

[1] This is the ninth of a series of notes intended to keep readers of the "Canadian Journal of Economics and Political Science" in touch with the evolution of statistical programmes in Canada. The first note was published in November, 1959; subsequent notes were published in February issues of the Journal. This note is reprinted here by kind permission of the Editor. Reprints are available from DBS on request.

Statistical revisions will be confined to the last two decades but presentational and conceptual changes will be made for earlier years, bringing the Canadian National Accounts closer to the UN's suggested framework.

The 1961 Input-Output table is virtually completed. Some delay in publication may, however, be necessary because the Input-Output table and the revision of the National Accounts based on the 1961 Census must be co-ordinated. The Input-Output staff plans a system for the regular compilation and updating of Input-Output tables, anticipating that the first such table will be for the year 1969.

Although the implementation of the Revised (1960) Standard Industrial Classification and the new establishment definition did not progress as rapidly as anticipated in the logging and mining industries, the project is now virtually complete. The 1965 publication for the logging industry will include statistics on both the former and the revised basis for 1963 and 1964 thus providing a two-year link between the old and new classification systems. The 1964 publications for the various mining industries will include statistics on both bases for the period 1961-63 thus providing a three-year link.[2] Beginning with the results of the 1966 Census, there will be advance statements for each industry, abbreviated versions of the final reports comprising the basic industrial statistics and shipments of the major products of the industry. Data should be available up to five months earlier for a number of industries.

Following the release of revisions to the 1949-based Index of Industrial Production in the May 1966 "Annual Supplement to the Monthly Index of Industrial Production" (Catalogue No. 61-005), the staff of the Industrial Output Section has been engaged in a major overhaul and updating of the entire industry real output system. Rebased monthly and quarterly measures for the post-1961 period, as well as the revised annual data up to 1961, will be made available as soon as possible in 1968.

The series of fixed capital flows and stocks which were published from 1926 to 1960 are being extended to 1966 and should be available shortly on the basis of the 1948 Standard Industrial Classification. Work is continuing on developing a method which will enable the switch of the major manufacturing groups from the basis of the 1948 to the 1960 Standard Industrial Classification, and on developing flows and stocks estimates for non-manufacturing industries, beginning with particular emphasis on utilities.

A survey was introduced in January 1968 for the mining industry, to obtain data on structures and equipment acquired by the mining industry and on activities and expenditures prior to production, such as exploration, purchase of mining land and rights, development, etc.

The annual Capital Expenditures Intentions survey, which takes place in the fall and requests a preliminary estimate for the year ending and intentions for the year ahead, has a coverage sufficiently large to derive detailed provincial estimates. In 1966 and 1967, the coverage of the mid-year survey was expanded sufficiently so that it too will permit the production of revised estimates by province. It should be possible to release provincial estimates of the revised intentions of capital spending for 1968.

The work on a set of financial accounts is near fruition, and publication of important parts of the tables is expected in 1968. These tables will assist in showing the role played in the financing of the economy by financial intermediaries, governments, non-financial corporations, individuals and the foreign sector.

A study of corporation financial statistics for the years 1958 to 1964 inclusive has been undertaken to provide annual information on the source and use of funds for Canadian and for foreign-owned companies as well as other information on the affairs of corporations in Canada.

The Eighth Federal-Provincial Conference on Municipal Finance Statistics was convened in April 1967. The Eighth Conference has as its objective a revised edition of the "Municipal Finance Reporting Manual" (Catalogue No. 12-507) which will reflect improvements in the finance reporting scheme on a national scale.

The DBS is also represented on the Federal Government Expenditure Coding Committee which has developed a comprehensive system of recording expenditures both by activity and by object, presently being implemented by all federal government departments. This committee now has the responsibility for advising the Treasury Board on matters of policy arising from the implementation of the system.

The Special Manpower Studies and Consultation Staff was established in January of 1967. In part it will continue some of the work of the Research and Analysis Section of the Labour Division, and in particular, the preparation of the Special Labour Force Studies. To date, seven studies have been released covering a variety of labour topics: education; work experience; job content; geographic mobility; female labour force participation; immigration (Catalogue Nos. 71-505 to 71-511 inclusive).

A sample survey of selected labour costs in the manufacturing industries of Canada was introduced in January 1968, following the successful completion of a pilot survey of employer expenditures for selected employee benefits in the spring and summer of 1966.

---

[2] Details of the revised methodology and the results of this conceptual approach may be found in "Smelting and Refining Industry, 1964", (Catalogue No. 41-214).

Emphasis on the improvement of the timeliness of Employment Section data has produced a three-phase approach. Some immediate improvement has resulted from the streamlining of existing procedures and the introduction of relatively minor innovations. Work in the direction of producing preliminary estimates for large establishments based on earlier cut-off dates will provide significant results in the intermediate run. In the meantime work is well advanced on an entirely new and completely automated program designed to produce major improvement in timeliness as well as other long-run benefits.

In May 1967, the main tables in the two monthly publications of the large establishment survey, "Employment and Average Weekly Wages and Salaries" and "Man-hours and Hourly Earnings" (Catalogue Nos. 72-002 and 72-003), were produced by means of a photocopy system thus saving about two weeks and eliminating several sources of possible error.

A large-scale income and work history survey of 30,000 households will be carried out in April 1968 in conjunction with the April Labour Force Survey. This is the largest such survey attempted; previous surveys had samples of 12,000 or fewer households; farm households will also be included.

A number of methodological studies dealing with the quality of DBS income series are in progress. A study is being made from 1961 census data of the farm population by farm characteristics, with special emphasis on the labour force, age, educational levels, etc. of farm population on non-commercial farms (those with product sales of less than $1,200).

Planning is under way for a further family expenditure survey to be carried out early in 1968, referring to the year 1967. It is designed to sample the population in the same eleven cities as in the survey of 1964, and to be comparable in size and scope to that survey. Utilization of existing computer programs is expected to yield considerably improved timeliness in producing results.

Work continued throughout 1967 on the revision of the Industry Selling Price Indexes and it is planned to publish the revised series in 1968, at least for the period since 1961. The revision includes an updating of the weighting system from 1953 to 1961, a change in time base from 1956 to 1961=100 and the introduction of the 1960 Standard Industrial Classification to replace the 1948 S.I.C.

The revised Price Index of Commodities and Services Used by Farmers (Operating Inputs) and its components will be published monthly on a 1961 time base early in 1968. In addition to a review of concepts, the item content and weighting patterns have been updated and the price samples revised.

Plans are being developed to update the national and regional city Consumer Price Indexes reference base to 1961 early in 1968. Some progress has been made in expanding and improving the collection of retail price data.

During the year, a research unit was established in the Transportation Statistics Division to review and examine existing transportation series relative to the requirements of both internal and external users.

A commitment to provide additional information was made to the former Canadian Maritime Commission in line with its new duties and responsibilities as part of the new Canadian Transport Commission. Also, early in 1966 the Bureau agreed to become the collection agency for the statistical requirements of the Department of Transport and the Board of Broadcast Governors. A glossary of technical terms on the radio and television broadcasting industry has been developed, and should be available early in 1968. Considerable progress has been made with a new series on Community Antennae (TV) Systems.

During the year, the Aviation Statistics Centre has extended and improved its services to the Air Transport Board and the Department of Transport. In connection with the latter's airport development program, the Centre has expanded its survey of aircraft movements; monthly and annual data on over 160 airports are now available.

The collection of Canadian railway freight traffic on the basis of the DBS Standard Commodity Classification has been delayed because of difficulties in producing a magnetic tape which would move permit conversion from the U.S. Standard Transportation Commodity Classification.

The quarterly Motor Transport Traffic Survey, which has been conducted on a national basis for the past ten years, was discontinued in its present form at the end of 1967. The Bureau is working closely with trucking industry associations at provincial and national levels on a proposed two-part survey of truck fleets and individual trucks. Field testing is expected to be undertaken in 1968 and it is hoped to begin the new survey in 1969.

A study and test are now under way to investigate the feasibility of a new sample design for Retail Sales estimates which would involve the use of area sampling and an extension of the lists used for the employment surveys. If the study proves that such a design is operationally feasible, the new sample will be in use by mid-1969. There is also a continuing effort to improve timeliness, by producing early estimates for all of Canada for store types (based on smaller coverage than the provincial estimates) and publishing these in the **Daily Bulletin** some two weeks before the full monthly report.

The Census of Merchandising is now not decennial but quinquennial. The first quinquennial Census is for the year 1966. This is a somewhat simplified

Census, omitting some detailed questions. The Census was planned to provide quickly, benchmark measures of total employment, payroll and sales or revenue, by store type (or kind of business), by trades, and by a maximum number of small geographical units. Advance reports, giving basic geographical analysis, by kind of business, will be released in March or April 1968. All other reports in the census series will be published during that year.

An annual survey of wholesale trade which will give principal statistics for about 150 kinds of business and six types of operation for the five regions of Canada is under development. In a few months the initial bulletin in this program will be published, containing wholesale trade statistics for 1964 and 1965.

Further, in each quinquennial Census year, the annual **wholesale** trade survey will be considered as occurring within a total census effort, so that all trade data may be as comprehensive and closely related as possible. For example, in the census year 1966, the annual wholesale trade survey has been expanded to provide standard census statistics for the provinces, principal cities, towns, counties and census divisions, and a special series of census-type reports is planned. The first report should be printed by July 1968, with the remainder to be published during the year.

The new survey of voluntary groups of grocery and combination stores for the year 1963, 1964 and 1965 was carried out in 1967. It is anticipated that a companion study, on voluntary chains in non-food kinds of business (i.e., drug stores, hardware stores and automobile accessories dealers), for the year 1964 and 1965, will be available by the first quarter of 1968.

The results of a survey of Advertising Expenditures in Canada for 1965, (Catalogue No. 63-512) will be available shortly. The last comprehensive survey was for 1954. As in the 1954 survey, ratios of total advertising expenditures to sales will be calculated for about two hundred manufacturing, wholesale, retail and service industries. A feature of the 1965 survey will be a tabulation of external advertising expenditures by advertising medium, by industry. From now on it is the intention of DBS to repeat this survey every five years.

The first three-year cycle of a survey of retail operating results is nearing completion. The food trades were surveyed for 1963 and reports published. The general merchandise, clothing, hardware, furniture and appliance trades were surveyed for 1964 and publication is proceeding. The automotive, drug, fuel, tobacco, jewellery and remaining trades were surveyed for 1965 and bulletins will begin to appear in a few months. Another cycle began in 1967 with a survey of the food trades for 1966.

To meet new demands for statistics arising from rapid changes in the structure and technology of agriculture, increasing attention is being given to more specialised and sophisticated method of data collection and processing such as random sampling, probability sampling frames, delineation of more homogeneous strata within the farm universe, etc. Work is continuing in application of "objective yield measurements" to obtain pre-harvest production estimates for apples in British Columbia, and winter wheat, sour cherries, peaches and grapes in Ontario. Probability sampling of area segments was experimentally introduced.

New surveys were begun on the production of forage crop seeds, on areas and yields of the principal processing vegetables, on the value of hair and fur seal pelts, and on the quantities of frozen vegetables held in commercial storage facilities for re-manufacture. An index of physical inputs for the agricultural industry is under way. Estimates for crop acreages and livestock numbers for the years 1962 to 1965 are being revised according to the benchmark data from the 1966 Census of Agriculture. A master list of farm operators, and the addressing of survey questionnaires have been computerized completely.

The Sampling and Survey Research Division undertook four projects in 1967 analysing the coverage and content errors of the 1966 Census of Population and Agriculture (1) to estimate the number of **persons** not enumerated, by province as well as by broad age groups, (2) to estimate the under – and over – enumeration of **households** and the content error, (3) to enumerate a sample of area segments and farms within these segments by specially trained enumerators, using detailed questionnaires, and compare the results with those of the Census of Agriculture, and (4) to determine whether persons who move a few months prior to the Census are more likely to be missed than the rest of the population.

In September 1967, the census test of the self-enumeration procedure mentioned in last year's note was carried out in London, Ontario. The main purpose of the test was to determine the feasibility of implementing this census technique in future Canadian censuses. In preparation for the 1971 Census, research was carried out to produce proposals for a new system of census divisions in Saskatchewan.

The Health and Welfare Division arranged to have a question about contacts with physicians placed on the monthly labour force schedule on three occasions six months apart. The results will be summarized by age, sex, area and type of contact, and will be published in special reports.

A survey of salaries of graduate nurses employed in the public general and allied special hospitals of Canada was conducted in the spring of 1967. Nurses were classified by employment category, educational qualifications, whether registered or not registered, and also whether a member of a religious order or not. This was the first salary survey conducted by the Dominion Bureau of Statistics on an employment group in hospitals. Publication of the results is planned.

A separate section in the Health and Welfare Division was set up in April 1967 to deal with mental morbidity statistics. Reporting of patients admitted to institutions treating mental disorders has been considerably extended. Tabulations to be included in annual mental health publications have been expanded to include sections devoted to each type of institution, detailed length of stay tables, and aggregate days utilized by various groups of patients; demographic variables, such as marital status, are considered in greater detail or specificity. Further improvements are planned, such as analyses of first admission in terms of length of stay and other variables.

The complete computerization of annual processing of data pertaining to births, deaths, marriages, and stillbirths was initiated during 1967. Historical data from 1950 will be compiled. The Vital Statistics Council for Canada, made up of representatives of provincial registration authorities and the Bureau, is expected to complete during 1968 its review of statistical, administrative, and legal uses of items on present birth, marriage, and death registration forms. Vital record linkage by computer technique is being explored as an alternative to adding items of a social or demographic character to the present provincial records.

BOUR FORCE (More detail in Table 19)

EMPLOYMENT DECLINED IN DECEMBER WHILE UNEMPLOYMENT INCREASED. TOTAL LABOUR FORCE WAS VIRTUALLY CHANGED. UNEMPLOYMENT WAS 4.7 PER CENT OF THE LABOUR FORCE.

	total labour force	total employed	employed non-agriculture	unemployed	unemployment rate	not in the labour force

---

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary dence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census Canada, 1961, Catalogue Number 12-506. [2] Includes logging, fishing, trapping and hunting. [3] Includes mechanical and construction. [4] Includes a small number in -specified occupations. [5] Does not include students entering Canada on students' visas. [6] Includes also retired persons, elderly dependents, fiancés or fiancées l other unspecified persons not intending to enter the labour force. **Source: Quarterly Bulletin, Department of Manpower and Immigration.**

---

[1] Includes change in farm inventories. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for withdrawals of grain from farm stocks and the change in livestock items. Because of arbitrary elements, too precise an interpretation should not be given to the series. [2] Includes residual error of estimate. **Source: at bottom of Table 12.**

---

[1] Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. [2] The labour force as a percentage of the population 14 years of age and over. [3] The unemployed as a percentage of the labour force. **Source: Labour Force Bulletin, (71-001), D.B.S.**

---

[1] See footnote 1, table 19. Labour force obtained as the sum of employed and unemployed from tables 21 and 23. [2] Canada totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page S-1. These differences are small and are due to a statistical discrepancy. **Source: The Labour Force, (71-001) D.B.S.**

[1] In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage is not included. [2] The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; the total, however, includes all work stoppages. The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately; should strikes occur in these industries, they also will be shown in the total. [3] Includes miscellaneous manufacturing industries. [4] Includes also publishing and allied industries. [5] Includes also the storage and communication industries. **Source: Labour Gazette, Department of Labour.**

*Revised monthly data will be available later.

[1] The data in Tables 28 to 35 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] Excludes agriculture, fishing, trapping and ublic administration and defence. [3] Includes storage, electric power, gas and water utilities. [4] Excludes domestic service. **Source: Employment and Average Weekly Wages and Salaries, (72-002), D.B.S.**

[1] See footnotes 1 and 2 and source in Table 28. [2] Employment indexes in total manufacturing and in its total durable and non-durable components are given n Table 28. [3] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included n non-durable manufacturing. [4] Except machinery and transportation equipment industries.

[1] The data for the current year are subject to revision. [2] Includes gold. [3] Consists of general wholesale index less animal products and vegetable products omponent groups. [4] Consists of iron products and non-ferrous metals products component groups less gold. [5] These two series comprise the general wholesale ndex. [6] Excludes gold. **Source: Prices and Price Indexes (62-002), D. B. S.**

---

[1] Monthly shipments represent an estimated projection of the latest available census of manufacturer's values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D. B. S.**

---

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. [2] Total manufacturing inventory owned by manufacturers including warehouse stocks. [3] Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. [4] End of period. Annual figures for inventories and unfilled orders are end of December values. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D. B. S.**

[1] Production of tobacco products, as indicated by the sale of excise duty stamps. [2] Includes smoking and chewing tobacco. [3] Includes smoking, chewing and twist tobacco. [4] Stocks of redried domestic and imported leaf at end of quarter. [5] The production of beer is shown in thousand barrels of 25 gallons each. [6] Includes bottling of imported liquors. Excludes rebottling and intra-industry transfers. [7] End of period; spirit stock balance remaining in bond for all Canada plus distillery stock in process of being manufactured. **Sources: Tobacco and Tobacco Products Statistics Quarterly (32-014), D. B. S.; and Department of National Revenue.**

[1] Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. 100 cu. ft. of solid wood; pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. [3] Customs exports. [4] Mill shipments destined for export. **Sources: Pulpwood and Wood Residue Statistics (25-001), Trade of Canada, Exports (65-004), D. B. S; Bulletins of Canadian Pulp and Paper Association and Newsprint Association of Canada.**

---

[1] Data on net shipments relate to rolled steels products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [2] Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. [3] Includes appliances and utensils. Note: Some groupings are not entirely comparable to year 1964 due to change in classifications but in general the differences are minimal. [4] Excluding shipments for re-processing at maker's own plant. **Source: Primary Iron and Steel (41-001), D. B. S.**

[1] These totals include all generating agencies producing over ten million kilowatt hours per year. [2] These columns include all generating utilities and generating industries respectively, producing over ten million kilowatt hours per year. [3] Less imports. [4] Total net generation less net exports. **Source: Electric ower Statistics, (57-001), D. B. S.**

---

[1] Barrels of 35 Canadian gallons. [2] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [3] Refinery oduction (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [4] Includes deliveries of butane comingled in the crude stream in Saskatchewan and Alberta. [5] Includes inventories at end of period being held at gas plants and in storage caverns. [6] Includes stove l, kerosene and tractor fuel. [7] Includes aviation gasoline and aviation turbo fuel. [8] Due to conceptual changes, the stock and sales series are not available on a mparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. [9] Includes petro-chemical feed stocks, naphtha specialies, coke, lubricating oil and grease, still gas and other products. **Source: Refined Petroleum Products (45-004), D. B. S.**

Revised '66 - means 1966 is revised only.

---

[1] The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. **Source: Building Permits (64-001), D.B.S.**

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage nside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan reas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The reainder of the country is covered on a sample basis quarterly. [2] End of period. **Source: New Residential Construction (64-002), D. B. S.**

Note: Components may not add to totals due to rounding. [1] The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. [2] Excluding trucks. [3] The total value of all machines shown in this table is greater than the value shown for farm machinery in Table 87 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. **Source: Farm Implement and Equipment Sales (63-009), D.B.S.**

[1] These indexes are available for January, April and August only. [2] Average rates of cash wages paid per month to male hired help on farms. They reflect the erage of the wages paid to all male farm help regardless of age and skill. Data are available for January, May and August only. [3] Exclusive of Newfoundland. stern grain prices used in the construction of the Index prior to August 1, 1965 are final prices. From August 1, 1965 to date, the western grain prices used in the dex are initial prices only for wheat, oats and barley. [4] Barley No. 1 feed; hogs grade "B" alive. [5] Price of 100 lbs. good steer as a percentage of the price of 0 lbs. live hog, grade B. [6] Price of 100 lbs. good steer as a percentage of the price of 100 lbs. good lamb. [7] Quotations refer to steers of all weights. [8] Grade 31" hogs. **Sources: Price Index Numbers of Commodities and Services Used by Farmers (62-004); Farm Wages in Canada (21-002) Occasional; Coarse Grains uarterly (22-001), D.B.S. and Livestock and Meat Trade Report, Dept. of Agriculture.**

[1] Department store stocks at end of period at selling value. The series on "total sales, all departments" is a revised series based on the results of the 51 Census of Merchandising and Service Establishments, (see also column 5, Table 85). The departmental breakdown for the months prior to January 1967 has been adjusted to the new basis. The stock series at the total level and by component for the period prior to 1967 are based on the 1951 Census. **Source: partment Store Sales and Stocks (63-002), D.B.S.**

Table 87: value of wholesale trade[1], based on the 1948 standard industrial classification (million dollars)

[1] The figures in the first four columns, i.e. all countries, United States, United Kingdom and all other countries, for the period April 1966 through July 1967 ve been revised to account for delays in the receipts of customs documents. The revisions have not been extended to columns of figures for other countries, and ir sum differs from the revised "all other countries" and "Total Imports" shown in this table. [2] Includes Belgium, Luxembourg, France, Germany, Italy and therlands. **Source: Trade of Canada, Imports (65-007), D. B. S.**

[1] Column numbers refer to tables 93 and 94. [2] Includes special transaction-trade, not shown separately. [3] Includes scrap. [4] The annual index, being lculated separately, will differ slightly from the index obtained by the average of the twelve months. [5] Total imports revised to account for delays in the receipts customs documents for the period April 1966 — July 1967 are: in 1966, April (822.4), May (938.4), June (900.6), July (792.8), August (818.2), Sept. (825.6), t. (936.2), Nov. (961.0), Dec. (872.0) and in 1967, Jan. (873.7), Feb. (766.4), March (851.8), April (944.6), May (1,053.9), June (977.5) and July (915.8).

[1] Monthly averages for 1965 and 1966 may differ from the averages of the monthly data due to revisions which cannot be allocated by months. [2] Data in this table refer to class 1 and class 2 carriers which are railways with gross annual operating revenues of $500,000 or over. Includes operations of United States railways operating in Canada but excludes operations of Canadian railways in the United States. [3] Includes traffic interchanged between Canadian railways. **Sources: Railway Operating Statistics (52-003) monthly, and (52-206) annual, D. B. S.**

[1] Includes Class I and Class II carriers only. These are trucking firms having $100,000 or more gross annual operating revenues. [2] Includes Class I carriers only. These are carriers having $100,000 or more gross annual revenues primarily from inter-city and rural bus operations. Regular and chartered services are included. [3] Includes Class I carriers only. These are carriers having $100,000 or more gross annual revenues primarily from urban transit operations. Data are totals for motor bus, trolley coach, street car, subway and chartered services. **Sources: Motor Carriers-Freight, Quarterly (53-005), Passenger Bus Statistics (53-002) monthly, and Urban Transit (53-003) monthly, D. B. S.**

[1] Monthly averages for years 1965 and 1966 differ from the averages of the monthly data due to revisions which cannot be allocated by months. [2] Includes heduled and non-scheduled carriers, groups I to IV. These groups cover all air carriers with gross operating revenues of over $60, 000 annually prior to January, '64 and over $100, 000 annually since. [3] United States and other foreign carriers having scheduled services into and out of Canada. Excludes passengers in transit rough Canada. [4] Cargo includes air freight and express but excludes mail and excess baggage. [5] Data prior to 1964 do not include bulk transportation. Because survey limitations, data on bulk transportation after January 1, 1964 refer only to aircraft having a minimum authorized take-off weight on wheels in excess of ,000 lbs. **Source: Civil Aviation (51-001), D. B. S.**

---

[1]The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does not include failures, sales or seizures carried out under other legislation.The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, Prairie provinces and British Columbia from the total. [2]In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. **Source: Commercial Failures (61-002) Quarterly, D.B.S.** *167,333 **258,935 ***108,631

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are aver-es of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Mainly deposits of foreign banks. [3] Capital, rest fund and divided profits as at the latest fiscal year-end. [4] Including issues payable in foreign currency. [5] Securities purchased direct from issuer with a term of less than e year at time of issue are classified as loans. [6] Excluding Canadian day-to-day loans. [7] Loans to grain dealers and exporters. [8] Loans to finance purchase of nada Savings Bonds at time of issue. [9] Total of foreign funds, short term foreign investments and other foreign currency assets less foreign currency liabilities. ncluding loans to instalment finance companies. **Source: Statistical Summary of Bank of Canada.**

---

[1]Excluding revivals, increases, dividend additions, reinsurance acquired, credit insurance and pension bonds without insurance. Value totals are estimates jected from the sales reported by 34 companies operating in Canada representing 82% of new ordinary and 83% of new group contracts. [2]The monthly Canada als for 1964 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. Neither the nthly figures for 1964 nor the monthly averages for 1964 have been revised to agree with the Canada total. [3]Total new settled-for ordinary sales in Canada. nder new or amended contracts.

Note: Components may not add to totals due to partial revisions.

[1] End of period. [2] Excluding Treasury Bills, Canada Savings Bonds and other non-market issues. [3] Figures are subject to revision. Series cover all publicly announced issues and some private placements not publicly announced. Notes with an original term to maturity of over one year. [4] Includes Canadian Pension Plan series bonds issued by the provinces and their agencies and purchased by the C. P. P. Investment Fund. [5] Consists of issues of Canadian religious and other institutions and Canadian dollar issues of foreign debtors. **Source: Statistical Summary of Bank of Canada.**

---

[1] The definition of profits before taxes is based mainly on the accounting definition used by corporations. However, depletion charges are added back to net ts while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all panies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by sample of all companies incorporated in da (excluding government-owned companies). [2] As is evident from the above footnote, the data reporting unit is the company; the data are therefore not entirely arable with data where the establishment is the reporting unit. [3] Includes also the furniture and furnishings industry. [4] Includes the primary metal, the metal cating, the machinery and the transportation equipment industries. [5] Includes tobacco products, leather and miscellaneous manufacturing industries. [6] Includes storage and communication industries. [7] Includes agriculture, forestry, fishing and construction. **Source: Corporation Profits (61-003), D. B. S.**

[1] The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. [2] Stocks included in the mining index are for producing mines. [3] Combines the industrials, utilities and finance common stocks. [4] Stocks included in industrial mines are for companies whose operations include smelting and refining. [5] The headings for "base metals" and "industrial mines" are not found in the Standard Industrial Classification. [6] Includes also the machinery industries (except electrical machinery) and the transportation equipment industries. **Source: Prices and Price Indexes (62-002), D.B.S.**

---

[1]This statement does not include any receipts other than regular budgetary revenues. Excluded for example, are all receipts arising from payments of loans dvances, or from accumulations on annuity, pension and insurance funds. [2]For comparative purposes figures may differ from those previously reported to reflect ges in accounting during 1967-68. Figures are rounded and may not add to totals. [3]March includes supplementary payments arising from the closing of the unts.

List of Statistical Tables..Inside Back Cover

A NOTE TO USERS

Revisions and Modifications:

Tables 20 to 25 and page S-1: Labour Force.

The seasonally adjusted labour force series have been revised to reflect the incorporation of 1967 data. The revised series covering the entire period 1953 to date were published in the February 16 issue of the "Weekly Supplement" (Catalogue No. 11-004). The unadjusted data are unchanged. Additional labour force statistics unadjusted and adjusted for seasonality are published in the second edition of "Seasonally Adjusted Labour Force Statistics" (Catalogue No. 71-201).

Tables 41, 42 and 43: Shipments, Inventories and New Orders by Economic Use Groups.

The above tables, based on the 1948 Standard Industrial Classification, have been deleted; they will be reintroduced when the data according to the revised 1960 SIC become available.

Table 86: Department Store Sales and Stocks.

The sales and stocks series in the above table have been revised back to January 1961 based on results of the 1961 Census of Merchandising and Service Establishments. The revised data for the period not covered by the Review may be obtained upon request from Current Business Indicators and Data Bank Section.

In addition, the format of the table has been expanded to include an additional series, namely "all other departments".

Other information:

A warning note has been introduced on the inside back cover of this issue regarding possible differences between annual averages published and 12-month averages of monthly data or 4-quarter averages of quarterly data. Differences arise from the fact that revisions are made to monthly or quarterly figures as they become available whereas annual averages are revised only once a year when final figures become available.

Annual Subscription: $5.00 — Single copy: 50c.

This Review and other publications of the Dominion Bureau of Statistics, including a free annotated catalogue of current publications may be ordered from Publications Distribution, Dominion Bureau of Statistics, Ottawa, Ont. or from the Queen's Printer, Ottawa, Canada, and remittances made payable to the Receiver General of Canada.

2400-501

ROGER DUHAMEL, F.R.S.C., Queen's Printer and Controller of Stationery, Ottawa, 1968

RECENT PUBLICATIONS OF THE DOMINION BUREAU OF STATISTICS

The Bureau is introducing a new publication to be called "Statistical Observer". This is designed to keep economists and others in the social sciences informed about publications and projects of the DBS and other organizations.

A "Catalogue of Historical Statistics", (Catalogue No. 11-504) prepared by the Library staff of the Bureau is in press and will be issued shortly. This catalogue gives the complete bibliographical history of all publications issued by the Bureau since its founding in 1918 to 1960; later information is provided by the present series of current catalogues. A record of decennial census publications since the 1871 Census and other major statistical publications issued before the Bureau was founded, is also included. Arrangement of the titles is by an expansion of the classification numbers used in the current catalogue, so that libraries and others having a historical collection of Bureau publications can organize them as a unit.

The Centennial volume "Canada One Hundred 1867-1967" will shortly be available in a Spanish edition.

The Bureau is publishing, in both English and French language editions, a new series of book-length 1961 Census Monographs in an endeavour to provide extensive analysis of various social and economic phenomena in Canada. While concentrating on the result of the 1961 Census the Monographs also draw upon previous Censuses and upon statistical material from other sources. As of March 1968 the Bureau is able to report the following monographs either off the press or in an advanced stage of publication:

1. Labour Force studies:
    (1) "Historical Estimates of the Canadian Labour Force" by F. Denton and S. Ostry (Catalogue No. 99-549).
    (2) "The Occupational Composition of the Canadian Labour Force" by S. Ostry (Catalogue No. 99-550).
    (3) "Provincial Differences in Labour Force Participation" by S. Ostry (Catalogue No. 99-551).
    (4) "Unemployment in Canada" by S. Ostry (Catalogue No. 99-552).
2. *Tendances et Facteurs de la Fécondité au Canada* by Jacques Henripin (Catalogue No. 99-541 F).
3. "Urban Development in Canada" by L.O. Stone (Catalogue No. 99-542).
4. "Trends in Canadian Marketing" by M.S. Moyer and G. Snyder (Catalogue No. 99-543).
5. "Incomes of Canadians" by J.R. Podoluk (Catalogue No. 99-544).[1]

The second issue of "Seasonally Adjusted Labour Force Statistics", (Catalogue No. 71-201, bilingual) scheduled for release in February 1968, contains more than eighty time series derived from the monthly "Labour Force Survey" for the period January 1953 to December 1967. For each series are presented seasonally unadjusted data, twelve-month moving averages of the unadjusted data, seasonal adjustment factors and the seasonally adjusted data.

Estimates of employees available from the beginning of 1961 in "Estimates of Employees by Province and Industry" (Catalogue No. 72-008), will soon be supplemented by monthly surveys covering the field of education, both publicly-supported and private hospitals, and welfare institutions . The coverage of the estimates will thereby be increased by some 1,000,000 employees.

During 1967, the second annual report dealing with aggregate productivity changes was released under the new title of "Aggregate Productivity Trends", (Catalogue No. 14-201).[2] This latest report relates to the period 1946 to 1966. While its overall industrial coverage remains the same, i.e. the commercial economy, the detail provided for component industries and sectors has been expanded by the provision of productivity measures for the commercial service-producing industries as a whole and for two variants of the total goods-producing industries, one excluding agriculture and the other including it. Growth-rate tables are included for both output per person employed and per man-hour.[3] The report also includes a number of comparisons of productivity growth with corresponding sectors of the U.S. economy based on roughly matching data prepared by the U.S. Bureau of Labour Statistics.

---

[1] This monograph to be published in the first half of 1968, is primarily based upon 1961 census data but includes a discussion of 1951-1961 income trends. The trend statistics developed for the monograph will be expanded and updated to 1965 and issued in a separate historical publication in 1968. For purposes of the monograph, family income data from the 1961 Census were tabulated on the same concept as the family concept used in the Surveys of Consumer Finances since 1951. The Statistics tabulated from the Census on this basis were published in "Economic Families", (Catalogue No. 98-524).

[2] The first report was called "Indexes of Output per Persons Employed and per Man-hour in Canada—Commercial Industries".

[3] Similar tables for their output, employment and man-hours components, while not published, may be obtained by writing directly to the Productivity Research and Analysis Section.

Note: This text supplements the article "Recent Developments in the Work of the Dominion Bureau of Statistics" which appeared in the February 1968 issue of this Review.

The preliminary results of the 1966 survey of Consumer Finances were scheduled for release late in 1967 while the main report, "Distribution of Incomes In Canada by Size, 1965" will be issued early in 1968. Unlike earlier surveys, this survey was expanded to collect income data from farm households.

Early in 1967, results became available from the Survey of Family Expenditure which was conducted early in 1965, for the calendar year 1964. The survey was carried out in eleven large urban centres across Canada and, like the 1959 survey, referred to families and unattached individuals, without restrictions of income or family size. Detailed tabulations of expenditures were obtained from over 2,000 family records classified separately by sixteen family characteristics, including city, family income, family type and age of head. Following release of some basic results in May 1967, a selection of tables pertaining to this survey was published along with the feature article "Surveys of Family Expenditure" in the "Canadian Statistical Review" of June 1967. The final publication "Urban Family Expenditure", (Catalogue No. 62-527), is being prepared for release.

In 1966 the Minister of Trade and Commerce wrote to subsidiaries of foreign corporations, and other companies largely foreign-owned, setting forth some guiding principles of good corporate behaviour in Canada. Subsequently he requested the Dominion Bureau of Statistics to undertake a survey that would provide a statistical study of the operations of these companies in Canada. The information resulting from the survey was contained in the publication "Foreign-owned Subsidiaries in Canada" released by the Department of Trade and Commerce in June, 1967. Further reports in this area will be forthcoming in the future.

A bilingual report, "Expenditures on Scientific Activities by Non-profit Organizations 1965", (Catalogue No. 13-526), was released which contains the first published data concerning this sector. This survey will be repeated when necessary.

The survey of Federal Government expenditures on scientific activities was carried out only every two years until 1966, when a survey was begun for the interim years. The information from the first of these supplementary surveys, on the fiscal years 1965-66 and 1966-67, was published in the DBS "Daily Bulletin Supplement—Business Finance, No. 4" of 4th October 1967.

"A Review of Conferences on Municipal Finance Statistics, 1937-1966", (Catalogue No. 68-505), was published in March, 1967. This publication provides a summary reference to the most important deliberations of those conferences. The Queen's University Conference on Municipal Finance Statistics (1966) surveyed present municipal government finance statistics programs and identified future developments.

Efforts are being devoted towards further improving the timeliness of the monthly "Trade of Canada" reports. The backlog of publication of the "Trade of Canada" annual volumes Nos. I, II and III is also being attacked. Volume I, "Summary and Analytical Tables 1960-1964", (Catalogue No. 65-201), is nearing completion and a further issue covering the years 1965-1966 will follow. "Trade of Canada, Volume II Exports", (Catalogue No. 65-202), covering 1963-1964 has recently appeared and further issues are expected. An issue of "Volume III Imports", (Catalogue No. 65-203) 1962-1964 is nearing completion. It contains some details of the convertibility key relating to the import commodity conversion which took place in those years. A report to cover the years 1960-1962 will be published eventually. A composite issue of the "Review of Foreign Trade", (Catalogue No. 65-205), which was suspended is to be revived in the next few months. The remaining annual series, "Exports by Mode of Transports", (Catalogue No. 65-206), has now been published in two issues for the calendar years 1965 and 1966. External Trade produces, on a cost recovery basis, a number of special reports on trade in individual commodities or with individual countries and regions. One notable recent additional report covers exports by region of lading in Canada at the commodity group level, cross-classified by quantity and value. This machine run is available quarterly with an annual summary subject to the usual service charge to cover costs. A monthly summary tabulation of imports classified by tariff item is also available regularly on request.

The general content of the report, "The Canadian Balance of International Payments. 1963, 1964 and 1965 International Investment Position," (Catalogue No. 67-201), which was published in August 1967, has been somewhat extended. For the first time a summary sector analysis of capital flows is given, also data by area on the total Canadian and foreign investment in Canada in enterprises controlled in countries other than the United States and United Kingdom. The report provides an extended analysis of the manufacturing operations in Canada of foreign-controlled enterprises, to which reference was made in the last article in this series. A number of new and revised statistical notes are included, among them a discussion of the relationship of data in the report to the data appearing in the annual reports under the Corporations and Labour Unions Returns Act.

A Reference Paper, "Price Indexes of Electric Utility Construction",[4] (Catalogue No. 62-526), released in June 1967, introduced newly developed base-weighted annual price indexes from 1956 to 1965 (1961=100) for construction of transmission lines, distribution systems, and transformation and switching stations.

---

[4] Subsequent indexes are published from time to time in "Prices and Price Indexes", (Catalogue No. 62-002).

The price samples of both Residential and Nonresidential Building Materials Indexes[5] were overhauled and the revised indexes for the period January 1966 forward were published in "Prices and Price Indexes" for March 1967 (Catalogue No. 62-002).

The historical series of statistics on livestock from 1871 to 1965, with particular reference to numbers on farm, farm values, and selected price series were published in "The Handbook of Agricultural Statistics, Part VI; Livestock and Annual Products", (Catalogue No. 21-508).

The first series of publications entitled "Causes of Death", (Catalogue No. 84-203) was released in September 1967. The publication shows the number of deaths in 1965 by the 3-digit categories and 4-digit sub-categories of the "International Statistical Classification of Diseases, Injuries and Causes of Death", (Seventh Revision, 1955) by sex for the provinces and by sex and five-year groups for Canada.

The third report in a series of technical reports to record special investigations in vital and health statistics, entitled "Canadian Joint Life Tables, 1960-1962" was released in July 1967. (Complimentary copies of the Technical Report Series are available on application to the Vital Statistics Section).

New publications in the series of special analytical reports dealing with particular aspects of vital statistics data were: "Life Expectancy Trends, 1930-1932 to 1960-1962", (Catalogue No. 84-518); "General Cancer Mortality, 1950-1963", (Catalogue No. 84-520); "Cancer Mortality by Site, 1950-1963", (Catalogue No. 84-521); "Accident Mortality, 1950-1964", (Catalogue No. 84-522); "Nuptiality, 1950-1964", (Catalogue No. 84-523); and "Infant Mortality, 1950-1964", (Catalogue No. 84-524); other project reports in this series will deal with suicides, perinatal mortality and cancer mortality by local areas. Also planned for publication during 1968 are the usual series of life-tables for Canada and each province, based on mortality during the 3 years around the 1966 Census.

---

[5] Subsequent indexes are published monthly in "Prices and Price Indexes", (Catalogue No. 62-002).

LABOUR FORCE (More detail in Table 19)

TOTAL LABOUR FORCE, EMPLOYMENT AND UNEMPLOYMENT DECLINED IN JANUARY. UNEMPLOYMENT WAS 4.4 PER CENT OF THE LABOUR FORCE.

[1] Gross National Product at market prices excluding accrued net income of farm operators from farm production. [2] Before dividends paid to non-residents; see so footnotes on Table 113. [3] Total of all monthly and quarterly series as in column 14, Table 90. [4] Seasonally adjusted figures for this series do not incorporate visions to the original data in table 75.

PRICES (More detail in Tables 37, 38, 39, 93, 94 and 114)

THE GENERAL WHOLESALE INDEX WAS UNCHANGED IN JANUARY; WHILE THE INDEX OF THIRTY INDUSTRIAL MATERIALS WAS SLIGHTLY LOWER.

THE INDEX OF INDUSTRIAL COMMON STOCKS AGAIN MOVED UP FRACTIONALLY IN JANUARY.

THE CONSUMER PRICE INDEX INCREASED IN JANUARY, FOOD AND SERVICES CONTRIBUTED MAINLY TO THE ADVANCE.

---

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. [2] Includes logging, fishing, trapping and hunting. [3] Includes mechanical and construction. [4] Includes a small number in on-specified occupations. [5] Does not include students entering Canada on students' visas. [6] Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force. **Source: Quarterly Bulletin, Department of Manpower and Immigration.**

---

[1] Includes change in farm inventories. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for withdrawals of grain from farm stocks and the change in livestock items. Because of arbitrary elements, too precise an interpretation should not be given to the series. [2] Includes residual error of estimate. **Source: at bottom of Table 12.**

---

[1] Quarterly indexes for agriculture and for aggregate domestic product for the current year become available later in the year. [2] Includes public administration and defence; hospitals; education; welfare, religion and other community service, n. e. c; and domestic service. **Sources: Index of Industrial Production, (61-005).** For detailed description of concepts and methods see **Indexes of Real Domestic Product by Industry of Origin, 1935-61, (61-505) D. B. S.**

Table 16: industrial production, volume indexes (1949 = 100) [1], based on the 1948 standard industrial classification

monthly averages or months	industrial production	mining												manufacturing

---

[1] Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. [2] The labour force as a percentage of the population 14 years of age and over. [3] The unemployed as a percentage of the labour force. **Source: Labour Force Bulletin, (71-001), D.B.S.**

[1] See footnote 1, table 19. Labour force obtained as the sum of employed and unemployed from tables 21 and 23. [2] Canada totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page S-1. These differences are small and are due to a statistical discrepancy. **Source: The Labour Force, (71-001) D.B.S.**

---

[1] In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage is not included. [2] The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; the total, however, includes all work stoppages. The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately; should strikes occur in these industries, they also will be shown in the total. [3] Includes miscellaneous manufacturing industries. [4] Includes also publishing and allied industries. [5] Includes also the storage and communication industries. **Source: Labour Gazette, Department of Labour.**

*Revised monthly data will be available later.

[1] The data in Tables 28 to 35 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] Excludes agriculture, fishing, trapping and public administration and defence. [3] Includes storage, electric power, gas and water utilities. [4] Excludes domestic service. **Source: Employment and Average Weekly Wages and Salaries, (72-002), D.B.S.**

[1] See footnotes 1 and 2 and source in Table 28. [2] Employment indexes in total manufacturing and in its total durable and non-durable components are given in Table 28. [3] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. [4] Except machinery and transportation equipment industries.

[1] The data for the current year are subject to revision. [2] Includes gold. [3] Consists of general wholesale index less animal products and vegetable products component groups. [4] Consists of iron products and non-ferrous metals products component groups less gold. [5] These two series comprise the general wholesale index. [6] Excludes gold. **Source: Prices and Price Indexes (62-002), D. B. S.**

[1] Monthly shipments represent an estimated projection of the latest available census of manufacturer's values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D. B. S.**

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. [2] Total manufacturing inventory owned by manufacturers including warehouse stocks. [3] Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. [4] End of period. Annual figures for inventories and unfilled orders are end of December values. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D. B. S.**

[1] Production of tobacco products, as indicated by the sale of excise duty stamps. [2] Includes smoking and chewing tobacco. [3] Includes smoking, chewing and twist tobacco. [4] Stocks of redried domestic and imported leaf at end of quarter. [5] The production of beer is shown in thousand barrels of 25 gallons each. [6] Includes bottling of imported liquors. Excludes rebottling and intra-industry transfers. [7] End of period; spirit stock balance remaining in bond for all Canada plus distillery stock in process of being manufactured. **Sources: Tobacco and Tobacco Products Statistics Quarterly (32-014), D. B. S.; and Department of National Revenue.**

[1] Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. [2] 100 cu. ft. of solid wood; pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. [3] Customs exports. [4] Mill shipments destined for export. **Sources: Pulpwood and Wood Residue Statistics (25-001), Trade of Canada, Exports (65-004), D. B. S; Bulletins of Canadian Pulp and Paper Association and Newsprint Association of Canada.**

---

[1] Data on net shipments relate to rolled steels products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [2] Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. [3] Includes appliances and utensils. Note: Some groupings are not entirely comparable to year 1964 due to change in classifications but in general the differences are minimal. [4] Excluding shipments for re-processing at maker's own plant. **Source: Primary Iron and Steel (41-001), D. B. S.**

---

[1] End of period. [2] Does not include apartment-type machines. [3] Electric and other. [4] Gas types are included. [5] In some cases these shipments are not at the factory level, and stocks at beginning of month plus production less shipments do not equal stocks at end of month. **Sources: Domestic Refrigerators and Freezers (43-001), Domestic Washing Machines and Clothes Dryers (43-002), D. B. S.**

[1] These totals include all generating agencies producing over ten million kilowatt hours per year. [2] These columns include all generating utilities and generating industries respectively, producing over ten million kilowatt hours per year. [3] Less imports. [4] Total net generation less net exports. **Source: Electric Power Statistics, (57-001), D. B. S.**

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. [1] Includes crude oil, condensate and pentanes plus. [2] Deliveries to refineries and exports do not add to total new supply due to losses, other uses and inventory changes. [3] Gross new production by field less field flared and waste, Canadian sources only. [4] By gas utilities, Canadian sources only. **Sources: Crude Petroleum and Natural Gas Production (26-006), Gas Utilities (55-002), D.B.S.**

---

[1] Barrels of 35 Canadian gallons. [2] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [3] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [4] Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. [5] Includes inventories at end of period being held at gas plants and in storage caverns. [6] Includes stove oil, kerosene and tractor fuel. [7] Includes aviation gasoline and aviation turbo fuel. [8] Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. [9] Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products. **Source: Refined Petroleum Products (45-004), D. B. S.**

Note: Components may not add to totals due to rounding differences. [1] The data are collected for 1,400 municipalities and individual figures are available on request. [2] Historical data back to 1920 are available in "Historical Monthly Statistics" Catalogue No. 11-503, occasional. Starting with January 1966, the number of municipalities has been reduced to 56 following the annexation of the town of Riverside to the city of Windsor. **Source: Building Permits (64-001), D. B. S.**

---

[1] The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. **Source: Building Permits (64-001), D.B.S.**

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. [2] End of period. **Source: New Residential Construction (64-002), D. B. S.**

---

[1] Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and Northwest Territories for which only annual statistics are collected. [2] Planks and boards, flooring and square timber. [3] Hollow blocks including fireproofing and load-bearing tile. [4] For building insulation only. [5] Figures cover the production of firms which normally account for 90 per cent of the total for Canada. [6] Factory sales of firms which normally account for 96% of total Canadian production. **Source: Concrete Products (44-002), Products made from Canadian Clays (44-005), Asphalt Roofing (45-001), Rigid Insulating Board (36-002), Iron Castings and Cast Iron Pipes and Fittings (41-004), Steel Wire and Specified Wire Products (41-006), Gypsum Products (44-003), Mineral Wool (44-004), Sales of Paints, Varnishes and Lacquers (46-001), Production, Shipments and Stocks on Hand of Sawmills (35-002), (35-003) monthly, (35-204) annual and Trade of Canada, Imports (65-007), Exports (65-004), D. [1] Cash receipts from farming operations excluding supplementary payments. Excludes Newfoundland. [2] Represents participation payments made by the Canadian Wheat Board direct to producers on crops delivered in previous years. [3] Includes rye, flaxseed, rapeseed, soybeans and corn. [4] Includes clover and grass seed, hay, clover, greenhouse products, mustard seed, sunflower seed, hops, dry beans and dry peas and miscellaneous products. [5] Made under the authority of the Agricultural Stabilization Act. **Source: Farm Cash Receipts (21-001), D. B. S.**

Note: Components may not add to totals due to rounding. [1] The estimates for the current year are subject to revision since the factors used in the blow-up are ased on the previous years' operations and may change when the current annual totals for all firms are known the following year. [2] Excluding trucks. [3] The total alue of all machines shown in this table is greater than the value shown for farm machinery in Table 87 which covers wholesalers proper only. The above table overs all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even hough sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. **Source: Farm Implement and Equipment Sales (63-009), D.B.S.**

[1] These indexes are available for January, April and August only. [2] Average rates of cash wages paid per month to male hired help on farms. They reflect the average of the wages paid to all male farm help regardless of age and skill. Data are available for January, May and August only. [3] Exclusive of Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1965 are final prices. From August 1, 1965 to date, the western grain prices used in the Index are initial prices only for wheat, oats and barley. [4] Barley No. 1 feed; hogs grade "B" alive. [5] Price of 100 lbs. good steer as a percentage of the price of 100 lbs. live hog, grade B. [6] Price of 100 lbs. good steer as a percentage of the price of 100 lbs. good lamb. [7] Quotations refer to steers of all weights. [8] Grade "B1" hogs. **Sources: Price Index Numbers of Commodities and Services Used by Farmers (62-004); Farm Wages in Canada (21-002) Occasional; Coarse Grains Quarterly (22-001), D.B.S. and Livestock and Meat Trade Report, Dept. of Agriculture.**

---

[1] Overseas clearances plus U.S. imports for domestic use compiled from returns of Canadian elevator licensees and advice from American grain correspondents. Customs exports are adjusted to reflect actual physical movement of wheat and wheat flour from Canada. Data shown for the last three months are not so adjusted. Annual data are monthly averages of crop year. [4] Includes eggs for hatching. **Sources: Coarse Grains Quarterly (22-001), Wheat Review (22-005), and Trade of anada, Exports (65-004), D. B. S.**

---

[1] Total retail trade obtained by summing "By Kinds of Business". The sum of the seasonally adjusted retail trade by regions will not necessarily add up to this total. [2] Includes sales of new and used cars, trucks and buses, repair parts and services, tires and tubes, storage batteries, gasoline, some farm implements and a small amount of wholesale trade. **Source: Retail Trade (63-005), D.B.S.**

Table 85: value of retail trade by type of business and province, based on the 1960 standard industrial classification – concluded

Note: Components may not add to totals due to rounding and partial revisions. [1]Fully secured by marketable bonds and stocks. Excludes loans to finance the purchase of Canada Savings Bonds. [2]Includes loans on the security of household property. [3]Includes loans to finance companies which are affiliates of retail merchandisers. [4]Religious, educational, health and welfare institutions. [5]Not available on a monthly basis. [6]Differs from general loans in Table 106 by the exclusion of loans to instalment finance companies. **Sources: Statistical Summary of the Bank of Canada and Dept. of Finance.**

*Credit extended mainly to individuals; includes unidentifiable amounts of credit extended for non-consumer purposes; excludes certain forms, mainly service credit extended by doctors, dentists, lawyers, pawnbrokers, travel companies, restaurants and personal credit for which no statistics are available. [1] Conditional sales agreements held in connection with the financing of retail purchases of consumers' goods and repaid in instalments. [2] Companies licensed under the Small Loans Act and affiliated compagnies engaged in making personal loans. [3] Cash loans with no conditional sales contract but usually repaid in instalments. [4] Personal loans other than those fully secured by marketable bonds and stocks and other than home improvement loans. [5] Loans other than secured loans and mortgage loans. [6] Figures for dates other than year-end are estimated on the basis of loans made by sixteen companies. [7] Sum of instalment credit of clothing, hardware and jewellery stores, fuel dealers and "all other trades" in Table 89. [8] Sum of charge accounts of clothing, hardware, independent grocery and combination stores, jewellery and general stores, fuel dealers, garages and filling stations and "all other trades" in Table 89. [9] Amount owing to oil companies ex commercial accounts. [10] Excludes mortgage loans; data available yearly only. [11] The data for Quebec savings banks loans and motor vehicle dealers are not seasonally adjusted as no seasonality is present; these series are repeated in the unadjusted form. **Sources: Credit Statistics (61-004), D.B.S.; Bank of Canada, Dept. of Insurance, Dept. of Finance and Dept. of Agriculture.**

[1] The figures in the first four columns, i.e. all countries, United States, United Kingdom and all other countries, for the period April 1966 through July 1967 have been revised to account for delays in the receipts of customs documents. The revisions have not been extended to columns of figures for other countries, and their sum differs from the revised "all other countries" and "Total Imports" shown in this table. [2] Includes Belgium, Luxembourg, France, Germany, Italy and Netherlands.

Source: Trade of Canada, Imports (65-007), D. B. S.

Table 93: merchandise exports, by commodity, based on the standard commodity classification[1] (million dollars)

[1] Column numbers refer to tables 93 and 94. [2] Includes special transaction-trade, not shown separately. [3] Includes scrap. [4] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [5] Total imports revised to account for delays in the receipts of customs documents for the period April 1966 – July 1967 are: in 1966, April (822.4), May (938.4), June (900.6), July (792.8), August (818.2), Sept. (825.6), Oct. (936.2), Nov. (961.0), Dec. (872.0) and in 1967, Jan. (873.7), Feb. (766.4), March (851.8), April (944.6), May (1,053.9), June (977.5) and July (915.8).

[1] Monthly averages for 1965 and 1966 may differ from the averages of the monthly data due to revisions which cannot be allocated by months. [2] Data in this able refer to class 1 and class 2 carriers which are railways with gross annual operating revenues of $500, 000 or over. Includes operations of United States ailways operating in Canada but excludes operations of Canadian railways in the United States. [3] Includes traffic interchanged between Canadian railways. **Sources: ailway Operating Statistics (52-003) monthly, and (52-206) annual, D. B. S.**

[1] Includes Class I and Class II carriers only. These are trucking firms having $100, 000 or more gross annual operating revenues. [2] Includes Class I carriers ly. These are carriers having $100, 000 or more gross annual revenues primarily from inter-city and rural bus operations. Regular and chartered services are cluded. [3] Includes Class I carriers only. These are carriers having $100, 000 or more gross annual revenues primarily from urban transit operations. Data are totals r motor bus, trolley coach, street car, subway and chartered services. **Sources: Motor Carriers-Freight, Quarterly (53-005), Passenger Bus Statistics (53-002) onthly, and Urban Transit (53-003) monthly, D. B. S.**

[1] Monthly averages for years 1965 and 1966 differ from the averages of the monthly data due to revisions which cannot be allocated by months. [2] Includes scheduled and non-scheduled carriers, groups I to IV. These groups cover all air carriers with gross operating revenues of over $60, 000 annually prior to January, 1964 and over $100, 000 annually since. [3] United States and other foreign carriers having scheduled services into and out of Canada. Excludes passengers in transit through Canada. [4] Cargo includes air freight and express but excludes mail and excess baggage. [5] Data prior to 1964 do not include bulk transportation. Because of survey limitations, data on bulk transportation after January 1, 1964 refer only to aircraft having a minimum authorized take-off weight on wheels in excess of 18, 000 lbs. **Source: Civil Aviation (51-001), D. B. S.**

---

[1] The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does not nclude failures, sales or seizures carried out under other legislation.The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, Prairie provinces and British Columbia from the total. [2] In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made nder this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. **Source: Commercial Failures (61-002) Quarterly, D.B.S.** *167,333 **258,935 ***108,631

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Mainly deposits of foreign banks. [3] Capital, rest fund and undivided profits as at the latest fiscal year-end. [4] Including issues payable in foreign currency. [5] Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. [6] Excluding Canadian day-to-day loans. [7] Loans to grain dealers and exporters. [8] Loans to finance purchase of Canada Savings Bonds at time of issue. [9] Total of foreign funds, short term foreign investments and other foreign currency assets less foreign currency liabilities. [10] Including loans to instalment finance companies. **Source: Statistical Summary of Bank of Canada.**

---

[1] The definition of profits before taxes is based mainly on the accounting definition used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by sample of all companies incorporated in Canada (excluding government-owned companies). [2] As is evident from the above footnote, the data reporting unit is the company; the data are therefore not entirely comparable with data where the establishment is the reporting unit. [3] Includes also the furniture and furnishings industry. [4] Includes the primary metal, the metal fabricating, the machinery and the transportation equipment industries. [5] Includes tobacco products, leather and miscellaneous manufacturing industries. [6] Includes also storage and communication industries. [7] Includes agriculture, forestry, fishing and construction. **Source: Corporation Profits (61-003), D. B. S.**

[1] The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. [2] Stocks included in the ning index are for producing mines. [3] Combines the industrials, utilities and finance common stocks. [4] Stocks included in industrial mines are for companies ose operations include smelting and refining. [5] The headings for "base metals" and "industrial mines" are not found in the Standard Industrial Classification. cludes also the machinery industries (except electrical machinery) and the transportation equipment industries. **Source: Prices and Price Indexes (62-002), B.S.**

---

[1] This statement does not include any receipts other than regular budgetary revenues. Excluded for example, are all receipts arising from payments of loans and advances, or from accumulations on annuity, pension and insurance funds. [2]For comparative purposes figures may differ from those previously reported to reflect changes in accounting during 1967-68. Figures are rounded and may not add to totals. [3]March includes supplementary payments arising from the closing of the accounts. **Sources: The Canada Gazette and Dept. of Finance.**

A NOTE TO USERS

Revisions and Modifications:

Page S-8: Rail Revenue Freight.

The seasonally adjusted data have been revised for the entire period from 1946. The X-11 variant of the United States Bureau of the Census Method II has been used for seasonal adjustment. Adjustments made for shipping-day variation were derived from actual variations in the data. The series is now published in thousand tons. The complete historical record from 1946 has been published in the Weekly Supplement to the Review, Catalogue No. 11-004, April 9 issue.

Table 108 and page S-8: Cheques Cashed in Clearing Centres.

The seasonally adjusted cheques cashed series for Canada on page S-8 and by province, major cities and type of account in table 108 have been revised from 1965. The unadjusted data are unchanged.

Tables 91, 92 and page S-7: Export and Import.

Seasonally adjusted data for exports and imports by major countries are revised commencing with January 1961. Export and import series have been adjusted by the X-11 variant of the United States Bureau of the Census Method II seasonal adjustment program. Adjustments made for trading-day variation were derived from actual variations in the data. The revisions have been published in the Weekly Supplement to the Review, Catalogue No. 11-004, April 9 issue.

REVISED BASED – WEIGHTED HIGHWAY CONSTRUCTION PRICE INDEXES, 1956 = 100

In February of this year, the Prices Division of the Dominion Bureau of Statistics released in the December issue of "Prices and Price Indexes", Catalogue No. 62-002 revised base-weighted annual highway construction price indexes on the base 1956 = 100 for the years 1956 to 1966. In the accompanying text significant changes in index levels and major characteristics of the revision are reviewed in detail. The combined and provincial indexes for seven provinces are shown in Table 1 below and Chart 1. Two additional provincial indexes, for Quebec and Alberta, are under development and will be incorporated into the base-weighted combined index. When this is completed, the current-weighted indexes are scheduled for revision. A complete description of the indexes is contained in the reference paper "Price Indexes of Highway Construction in Canada 1956 = 100", Catalogue No. 65-520.

TABLE 1. Revised Base-weighted Highway Construction Price Indexes, All-items and Major Components, Combined and Provinces, Annually, 1956 - 66

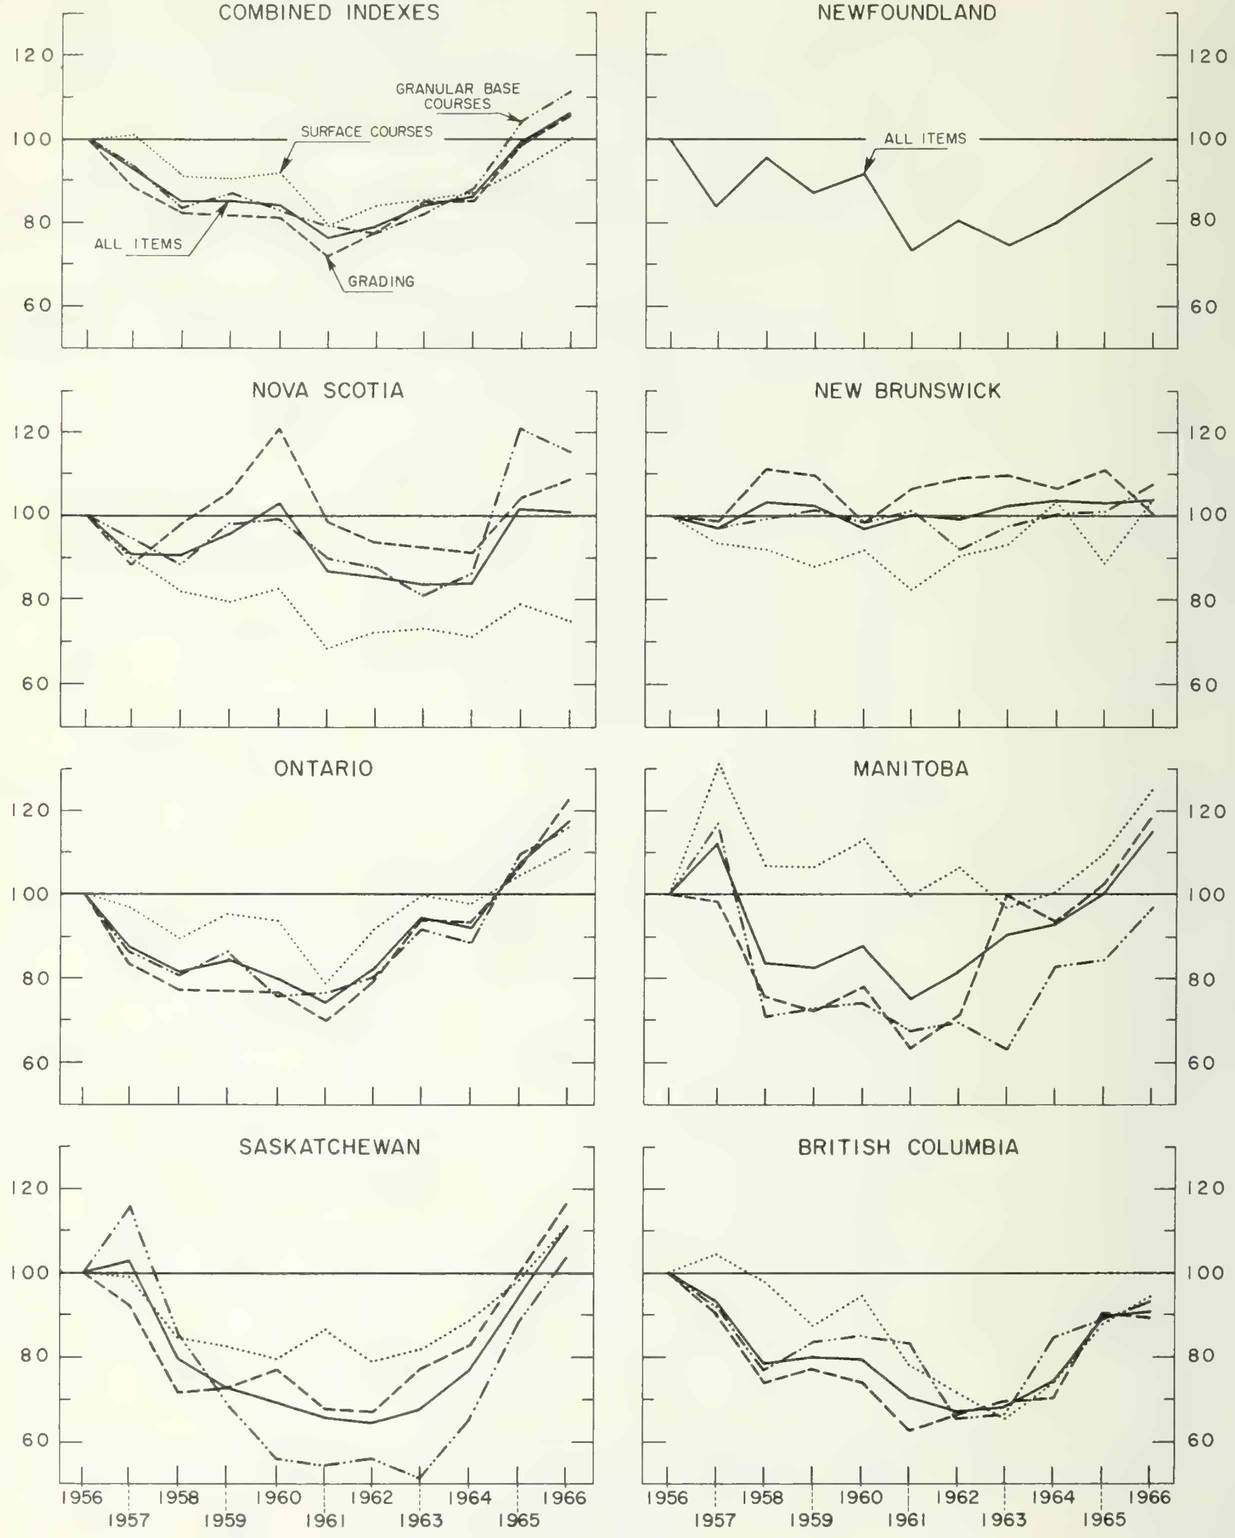
REVISED BASE-WEIGHTED HIGHWAY CONSTRUCTION PRICE INDEXES, ALL ITEMS AND MAJOR COMPONENTS.
COMBINED AND PROVINCE INDEXES
ANNUALLY 1956-1966(1)
1956 = 100



(1) Years refer to fiscal year, eg 1966 refers to the period April 1, 1966 to March 31, 1967

Characteristics of Recent Price Change

From 1956 through to 1961, the all-items combined price index decline to a level of 76. Price increases occurred in all subsequent years and were pronounced in the years 1963, 1965 and 1966 so that by 1966 the index was for the first time above the level of the base period.

As shown in the following table, sharp increases in capital formation in each of the years 1964, 1965 and 1966 were generally accompanied by rising prices paid by provincial highway departments to contractors and to manufacturers providing construction materials to the departments. Increases in the all-items combined index varied from under 3 per cent in 1964 to about 15 per cent in 1965 and 7 per cent in 1966. Increases in granular base courses tended to be stronger than increases shown by the grading components. Surface courses registered the smallest gains on the average. By province, some of the strongest price changes occurred in British Columbia and Saskatchewan. Prices were most stable in the New Brunswick grading and granular base course indexes.

TABLE 2. Percentage Changes in Revised Price Indexes of Highway Construction and Related Public and Private Investment, 1964, 1965 and 1966

	1964/1963	1965/1964	1966/1965

[2] **Source**: "Public and Private Investment in Canada," DBS Catalogue No. 61-206 (Annual).

Characteristics of the Index

The Price Indexes of Highway Construction in Canada express prices paid by provincial governments in contracts awarded for highway construction each fiscal year as a percentage of prices paid in the fiscal year April 1, 1956 to March 31, 1957. Base-weighted indexes are published annually and measure the effect of price change through time on the cost of specific programmes of highway construction in the seven provinces included, represented by highway construction contracts of $50,000 or more awarded over the period 1956 to 1966. Weights of items in the index, representing the relative importance of units of construction in the base period, are held constant. Only prices change from year to year, and the index thus measures the movement of prices through time. The all-items index or its components are useful for planning and budgeting for highway construction programmes, in escalating or up-dating previously costed road-work, in estimating replacement costs of previously completed roadwork, and as historical measurements of price trends in highway construction. Revised base-period weights are given in Tables 3 and 4.

These indexes do not necessarily reflect the price movements of non-contract construction or maintenance work. Further, because price levels in the base period varied from province to province, the indexes cannot be used to compare price differences between provinces.

Prices contained in the index are not for units of labour and materials as is usually the case in construction price indexes but rather for units of construction work put in place such as an acre of clearing, a cubic yard of earth excavation or a ton of bituminous hot-mix paving. In addition, the index contains prices of some materials, such as culvert pipe, usually supplied to the contractor by the highway departments. Prices of highway construction work are annual weighted averages of bid prices of units of construction in groups of contracts awarded,[1] classified by price-determining characteristics of the contracts and the bid items such as volume of the bid item, type of contract and geographic location. Prices of material items of supply are prices paid by government departments to suppliers.

The problem central to the pricing of construction goods is the lack of standardization in these goods from one period of time to the next. Because of the heterogeneity of construction goods, statisticians must make certain compromises in the development of price indexes which may be used to measure price changes for construction output of an unchanging quantity and quality (an implicit standard construction product). In most instances it is necessary to fall back on the pricing of inputs as a proxy measure of the movement of prices of the finished product. In the case of the highway price indexes, however, the use of bid prices in contracts awarded for standard units of work should give, conceptually, a close approximation to the desired finished product pricing.

The revision program does not reflect the adoption of new methodology but rather the incorporation of some new data and improvements which have accrued from greater knowledge and skill in the interpretation and use of existing data. These improvements resulted in the conclusion that some of the original data should not be retained in the revised base. The most significant exclusion is that relating to the Federal Government Index for which it was found that when work on the Trans-Canada Highway terminated in Western Canada, road construction was occurring in insufficient volume and in such widely scattered locations that it was impossible to create meaningful price relatives.

When a price index maker is dealing with a mass-produced item which is sold in great volume it is relatively easy to select identical transactions in successive time periods. From an aggregation of such numbers one can make statements about price changes between successive time periods with a fair degree of confidence. In highway construction it is necessary to acknowledge that identical transactions even at the contract item level do not occur in successive time periods. Some analysts of bid prices stop at this point and recognize that they are preparing unit cost indexes. However the bid classification systems adopted in DBS are considered to be sufficiently reliable so that one is able to say that the indexes are not unit cost indexes and therefore primarily measure price change. However, the relatively small numbers of contracts let in each province and the shifts in the road construction program which occur from time to time within a province force one to acknowledge that the indexes do not have the strength of some of the more conventional price indexes relating to sales of manufacturers goods or purchases of consumer goods. Perhaps the most accurate description is to term the highway price index a finely-controlled unit cost index.

The principal refinements of the revised indexes can be described as follows:

1. The main advance has come in the form of a more highly developed concept as to what constitutes a reliable price. Three factors are always considered in making this judgment: the number of bids, the variation of bids about the average, and the behaviour of other logically related indexes and prices. Almost without exception if an index has been created from 10 or more bids in each year where the variation about the average is small and where uniform price level and movement relationships are maintained with other items, the resulting price is regarded as being reliable. One of the characteristics of such a number is that it does not usually exhibit erratic price movements. If it does, it is possible to establish a cause of the unusual behaviour. On the basis of such criteria it was found that many of the items representing a relatively small proportion of the value of the contract which had been included in the original index were unreliable and these items were excluded from the revised index.

2. Definitions of price strata were realigned in many cases: (a) to recognize the existence of varieties of work which exhibited different price levels not seen during the original analysis, (b) to adjust quantity intervals to limits which encompassed the largest number of bids with the least loss in homogeneity, or (c) to reflect the incorporation of new data.

3. A satisfactory procedure was established to deal with unbalanced bids whereby such bids are identified and removed from all the averages affected.

4. In many instances it was found more reliable to use manufacturers selling prices as substitutes for departmental purchase prices. The latter were

---

[1] There may be a considerable time lag between the letting of the contract and completion of the job.

often designated f.o.b. jobsite and it was found in some provinces that bids were not let in sufficient volume to restrict the variation caused by differing freight distances.

5. In many of the bid items haul of the earth, rock or gravels to the jobsite is an implicit component of the bid. In other cases the haul cost was made and implicit component by creating a new unit price after adding in the value of haul. The reason for doing this was to capture the effect of the laid down price of the contract-item. However it was discovered that excessive quantity variations were occasionally occurring. Hence this practice was discontinued in the case of New Brunswick. It continues in British Columbia but will be discontinued if shifts in the average length of haul are observed.

Some problems remain unsolved. For example, it would be preferable to present an index relating to the contractors bid items separately from an index of departmental supply items. Because the data were not available to obtain a sample of departmental supply items and their weights, the basic structure of the indexes is unchanged although an attempt will be made when the indexes are rebased to 1971 = 100 to accomplish this change. In addition, resources were not expended currently to re-examining inputs of culvert pipe and asphalt into a current construction programme. The weights used currently for asphalt are probably reliable but it is not known how reliable the pipe weights are.

Because of an inability to improve the weighting pattern significantly during this revision it was decided to make only those changes which were necessary to incorporate new data or accommodate other revision changes.

In addition to the exclusion of the Federal Government Index mentioned earlier, changes in the Ontario weighting pattern were made to eliminate some of the differences between DBS and Ontario Department of Highways index aggregation procedures. In making the weight changes the relevant expenditure patterns were converted to 1956 price levels. In instances where weighting patterns were unchanged it was judged that current expenditure patterns were similar to original expenditure patterns.

Before proceeding to revisions for provincial indexes, it is appropriate to pay tribute to the large contribution made by the provincial highway departments in the creation of these index numbers. Without their comments of the validity of the classification systems, the resulting price movement and the probable cause of erratic behaviour encountered from time to time in the individual bid items, it would not be possible to create an estimate of a price index for this statistically difficult area.

The present weights of the combined index represent expenditure patterns for 1964 and 1965 at the province level. At the group level the Ontario weighting pattern reflects patterns of expenditure existing in 1964. The British Columbia weighting pattern now relates to 1964: The earlier pattern was heavily influenced by Trans-Canada Highway work and did not relate to more typical patterns which existed in later years. For all other provinces, the group weights used in the original index were similar to current expenditure patterns. In summary, the new weights relate to expenditure patterns prevailing or similar to those prevailing in 1964 or 1964 and 1965 expressed in 1956 prices. The time base of 1956 = 100 is retained unchanged. There have also been revisions to the price relatives from which the indexes are derived. The effect of these revisions has been substantial for New Brunswick, Manitoba and British Columbia.

For Newfoundland a relatively small number of contracts were let during a period of rapid change in the entire road construction industry. While publication at the all-items level is continued, users should regard the index as a unit cost index, reflecting inextricable mixtures of changes in quantity and price.

In the case of Nova Scotia the effect of the revision caused only minor differences in levels for the all-items index. The main characteristic of the revision was the identification of more finely-classified varieties of bid items which could replace the more aggregative classifications formerly used.

For New Brunswick, however, because of the inclusion of some new data which caused a different classification system to be adopted for four major index items, the revised index is substantially different from the original index, particularly in 1959 and for the years 1961 to 1963. Changes relate primarily to the introduction of a series of haul-rate prices based on haul rates fixed by the Department of Highways.

For a number of years the Department of Highways for Ontario and DBS were separately calculating a bid price index for highway construction. In 1964 separate tabulations ceased and it was agreed that resources released through the elimination of duplicated effort in the Department of Highways would be diverted to more analysis of the contract data. The index from 1964 forward is based on prices yielded by this enlarged Ontario programme. As a result of increased analysis, bid prices are now tabulated separately for five regions within the province. Until a longer history of price behaviour is accumulated, however, the regional prices relatives selected for inclusion in the index are given equal weights in the derivation of an item commodity index. For the period 1956 to 1964, some historical Ontario data and systems of classification were adopted for inclusion in the DBS index. Changes in the characteristics of the department's capital programme necessitated the introduction of a new weighting pattern, and substantial shifts occured in group weights. The combined effect of these two major changes caused differences in index levels which on the average were somewhat in excess of 2 per cent.

For Manitoba incorrect classifications were a major source of error in two component indexes. In addition two heavily weighted prices were replaced by estimates when experience proved the price movement to be unreliable. Two prices were estimated for earth excavation and one for placing portland cement concrete.

Minor revisions to the major and total indexes for Saskatchewan consisted on introducing a new price basket classification, and removal in 1964 of three low value items.

Because of the substantial shift in characteristics of road building in British Columbia, in addition to changes in assignment of some index items, it was necessary to revise group and item weights and 1964 was used as the source of the new expenditure pattern.

TABLE 3. Base-period Weights for Highway Construction Price Indexes Showing Original and Revised[1] Province Weights

	Newfoundland	Nova Scotia	New Brunswick	Ontario	Manitoba	Saskatchewan	British Columbia	Federal Government
Revised[1]	8.0	9.6	7.7	36.8	8.1	8.3	21.5	
Original	3.3	5.9	5.9	41.3	7.7	5.2	19.6	11.1

[1] Revised weights were derived from a weighted average of provincial road expenditure for 1964 and 1965. Values have been corrected back to 1956 for price changes since 1956.

TABLE 4. Revised Base-period Item Weights for the Highway Construction Price Indexes, Combined and Provinces

	Combined	Newfoundland	Nova Scotia	New Brunswick	Ontario	Manitoba	Saskatchewan	British Columbia
	per cent

REAL DOMESTIC PRODUCT LESS AGRICULTURE, FOURTH QUARTER, AND THE YEAR, 1967[1]

Seasonally adjusted real domestic product less agriculture increased by 0.6 per cent in the fourth quarter of 1967, advancing to 243.6 from the revised third-quarter level of 242.1. More than 60 per cent of this increase came from manufacturing, with 30 per cent contributed by transportation, storage and communication, and more than 20 per cent from finance, insurance and real estate. The non-agricultural goods-producing industries rose by 0.5 per cent and service-producing industries by 0.7 per cent.

Non-agricultural real output rose by 3.1 per cent during 1967, compared to the 6.7 per cent expansion recorded for 1966. The rate of growth for 1967 is also considerably less than the 1946 to 1966 average annual rate of growth of 4.8 per cent. Several of the major industry groupings showed increases well below their post-war average rates of growth. Manufacturing, for example, increased by only 1.1 per cent in 1967 compared to 4.9 per cent in the post-war period; construction fell by several percentage points from its 1966 level. Of the major industry groupings that rose in 1967 the transportation, storage and communication grouping registered the most significant increase, rising to 5.8 per cent compared to 4.8 per cent during 1946 to 1966.

Production by Industry, Fourth Quarter, 1967

Within the goods-producing industries manufacturing rose by 1.3 per cent, with more than half of the gain coming from the manufacture of durables, up 1.5 per cent, while non-durables increased by 1.1 per cent. Within durables' manufacturing the iron and steel products group expanded by 5 per cent. The major factors in this expansion were the primary iron and steel and the iron castings components which advanced by 10 per cent and 24 per cent, respectively. In both cases manufacture of pipe was the major cause of the gains. Production of motor vehicles also rose by 2 per cent, as gains in November and December offset the October decline which was attributable to the effects of labour disputes in the U.S. industry. Within non-durables' manufacturing all groups increased with the exception of rubber products, by amounts ranging from 1 to 4 per cent. The clothing and textile products groups accounted for more than half of the total increase in non-durables' manufacturing.

Mining rose by 1.3 per cent, with gains of 7 per cent in metal mining and 1 per cent in non-metal mining being partially offset by a 4 per cent decline in fuel mining. The main factor in the metal mining increase was a 22 per cent advance in iron ore. Crude petroleum, which accounted for the fuel mining decline, fell from an unusually high third-quarter level.

Electric power and gas utilities increased by 0.5 per cent in the fourth quarter. Forestry declined by 5.5 per cent because of decreased cuttings of pulpwood and other types of wood. Construction declined by about 2 per cent, with a drop in public construction partially offset by an increase in private construction.

Within the service-producing industries, transportation, storage and communication rose by 1.9 per cent, with transportation expanding by 2.5 per cent and communication by 0.5 per cent; storage was only slightly higher than its third-quarter level. Within transportation, water transportation provided the main strength by recovering from the strike effects of the previous quarter. Air transport was also strong (up 4 per cent) as was transportation by pipelines (up 3 per cent because of gas pipelines). Passenger transport showed the major weakness, reflecting the urban transit strike in Montreal which lasted from September 21 to October 21 and the lack of EXPO traffic in the last two months of the quarter. Railway transport was also down, by 0.5 per cent, due to a fractional decline in the freight component and a much larger decline in the passenger component which was also affected by the post-EXPO period. Within communication the telephone component rose by 2 per cent.

The finance, insurance and real estate grouping rose by 1.4 per cent with more than half of this increase coming from the rents component.

Wholesale and retail trade increased by 0.9 per cent, with retail trade 0.6 per cent higher than its third-quarter level and wholesale trade 1.3 per cent higher. Within retail trade, almost all of the components showed relatively small movements. Farm implement dealers was the only store-type to record a large increase, 10 per cent, which represented a partial recovery from a very low third-quarter level. Within wholesale trade movements were mixed. The groceries and food specialties component increased by 1 per cent, while the construction materials and supplies component decreased by 1 per cent.

The community, recreation, business and personal service grouping declined by 1.3 per cent over the third quarter of 1967 mainly because of a drop of 4.5 per cent in the personal service group. This drop was concentrated in the restaurants and the hotels, motels and lodging houses components, which reflected the closing of EXPO at the end of October. Continued advances in the education and health components resulted in a 0.5 per cent increase in the community group.

---

[1] It should be noted that the movements shown here may not always coincide with constant price gross national expenditure data in the quarterly national income and expenditure accounts, due to coverage and conceptual differences. Among these differences are the exclusion of agriculture from the real domestic product data, factor cost versus market price valuation, and the use of domestic versus national boundaries.

ABOUR FORCE (More detail in Table 19)

TOTAL LABOUR FORCE, EMPLOYMENT AND UNEMPLOYMENT WERE HIGHER IN FEBRUARY. UNEMPLOYMENT WAS 4.5 PERCENT F THE LABOUR FORCE.

		total labour force	total employed	employed non-agriculture	unemployed	unemployment rate	not in the labour force

[1] In single dwelling the removal of the $500 winter housing bonus has disturbed the seasonal pattern. Figures are subject to revision.

EXPORTS AND IMPORTS (More detail in Tables 91 and 92)

TOTAL EXPORTS WERE HIGHER IN JANUARY, REFLECTING INCREASES IN EXPORTS TO THE UNITED STATES AND TO ALL OTHER COUNTRIES.

TOTAL IMPORTS INCREASED IN FEBRUARY. HIGHER IMPORTS FROM THE UNITED STATES AND ALL OTHER COUNTRIES WERE PARTIALLY OFFSET BY LOWER IMPORTS FROM THE UNITED KINGDOM.

		exports including re-exports (million dollars)				imports[1] (million dollars)			
		all countries	United States	United Kingdom	all other countries	all countries	United States	United Kingdom	all other countries

---

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. [2] Includes logging, fishing, trapping and hunting. [3] Includes mechanical and construction. [4] Includes a small number in non-specified occupations. [5] Does not include students entering Canada on students' visas. [6] Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force. **Source: Quarterly Bulletin, Department of Manpower and Immigration.**

---

[1] Includes change in farm inventories. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for withdrawals of grain from farm stocks and the change in livestock items. Because of arbitrary elements, too precise an interpretation should not be given to the series. [2] Includes residual error of estimate. **Source: at bottom of Table 12.**

---

[1] Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. [2] The labour force as a percentage of the population 14 years of age and over. [3] The unemployed as a percentage of the labour force. **Source: Labour Force Bulletin, (71-001), D.B.S.**

[1] See footnote 1, table 19. Labour force obtained as the sum of employed and unemployed from tables 21 and 23. [2] Canada totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page S-1. These differences are small and are due to a statistical discrepancy. **Source: The Labour Force, (71-001) D.B.S.**

---

[1] In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage is not included.

[2] The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; the total, however, includes all work stoppages. The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately; should strikes occur in these industries, they also will be shown in the total.

[3] Includes miscellaneous manufacturing industries.

[4] Includes also publishing and allied industries.

[5] Includes also the storage and communication industries.

Source: Labour Gazette, Department of Labour.

*Revised monthly data will be available later.

Table 28: employment indexes,[1] by industrial division (1961 = 100), based on the 1960 standard industrial classification

monthly averages or months	industrial composite[2]	forestry	mining, including milling	manufacturing			construction	transportation, communication and other utilities[3]	trade		finance, insurance and real estate	service[4]

[1] The data in Tables 28 to 35 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] Excludes agriculture, fishing, trapping and public administration and defence. [3] Includes storage, electric power, gas and water utilities. [4] Excludes domestic service. **Source: Employment and Average Weekly Wages and Salaries, (72-002), D.B.S.**

[1] See footnote 1 and source in Table 28. [2] Employment indexes in total manufacturing and in its total durable and non-durable components are given in Table 28. [3] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. [4] Except machinery and transportation equipment industries.

[1] The data for the current year are subject to revision. [2] Includes gold. [3] Consists of general wholesale index less animal products and vegetable products component groups. [4] Consists of iron products and non-ferrous metals products component groups less gold. [5] These two series comprise the general wholesale index. [6] Excludes gold. **Source: Prices and Price Indexes (62-002), D. B. S.**

[1] Monthly shipments represent an estimated projection of the latest available census of manufacturer's values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D. B. S.**

---

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. [2] Total manufacturing inventory owned by manufacturers including warehouse stocks. [3] Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. [4] End of period. Annual figures for inventories and unfilled orders are end of December values. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D. B. S.**

[1] Production of tobacco products, as indicated by the sale of excise duty stamps. [2] Includes smoking and chewing tobacco. [3] Includes smoking, chewing and twist tobacco. [4] Stocks of redried domestic and imported leaf at end of quarter. [5] The production of beer is shown in thousand barrels of 25 gallons each. [6] Includes bottling of imported liquors. Excludes rebottling and intra-industry transfers. [7] End of period; spirit stock balance remaining in bond for all Canada plus distillery stock in process of being manufactured. **Sources: Tobacco and Tobacco Products Statistics Quarterly (32-014), D. B. S.; and Department of National Revenue.**

---

[1] Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. [2] 100 cu. ft. of solid wood; pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. [3] Customs exports. [4] Mill shipments destined for export. **Sources: Pulpwood and Wood Residue Statistics (25-001), Trade of Canada, Exports (65-004), D.B.S; Bulletins of Canadian Pulp and Paper Association and Newsprint Association of Canada.**

---

[1] Data on net shipments relate to rolled steels products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [2] Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. [3] Includes appliances and utensils. Note: Some groupings are not entirely comparable to year 1964 due to change in classifications but in general the differences are minimal. [4] Excluding shipments for re-processing at maker's own plant. **Source: Primary Iron and Steel (41-001), D. B. S.**

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. [1] Includes crude oil, condensate and pentanes plus. [2] Deliveries to refineries and exports do not add to total new supply due to losses, other uses and inventory changes. [3] Gross new production by field less field flared and waste, Canadian sources only. [4] By gas utilities, Canadian sources only. **Sources: Crude Petroleum and Natural Gas Production (26-006), Gas Utilities (55-002), D.B.S.**

---

[1] Barrels of 35 Canadian gallons. [2] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [3] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [4] Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. [5] Includes inventories at end of period being held at gas plants and in storage caverns. [6] Includes stove oil, kerosene and tractor fuel. [7] Includes aviation gasoline and aviation turbo fuel. [8] Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. [9] Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products. **Source: Refined Petroleum Products (45-004), D. B. S.**

Note: Components may not add to totals due to rounding differences. [1] The data are collected for 1,400 municipalities and individual figures are available on request. [2] Historical data back to 1920 are available in "Historical Monthly Statistics" Catalogue No. 11-503, occasional. Starting with January 1966, the number of municipalities has been reduced to 56 following the annexation of the town of Riverside to the city of Windsor. **Source: Building Permits (64-001), D.B.S.**

---

[1] The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. **Source: Building Permits (64-001), D.B.S.**

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. [2] End of period. **Source: New Residential Construction (64-002), D. B. S.**

[1] Cash receipts from farming operations excluding supplementary payments. Excludes Newfoundland. [2] Represents participation payments made by the Canadian Wheat Board direct to producers on crops delivered in previous years. [3] Includes rye, flaxseed, rapeseed, soybeans and corn. [4] Includes clover and grass seed, hay, clover, greenhouse products, mustard seed, sunflower seed, hops, dry beans and dry peas and miscellaneous products. [5] Made under the authority of the Agricultural Stabilization Act. **Source: Farm Cash Receipts (21-001), D.B.S.**

Note: Components may not add to totals due to rounding. [1] The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. [2] Excluding trucks. [3] The total value of all machines shown in this table is greater than the value shown for farm machinery in Table 87 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. **Source: Farm Implement and Equipment Sales (63-009), D.B.S.**

---

[1] These indexes are available for January, April and August only. [2] Average rates of cash wages paid per month to male hired help on farms. They reflect the average of the wages paid to all male farm help regardless of age and skill. Data are available for January, May and August only. [3] Exclusive of Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1965 are final prices. From August 1, 1965 to date, the western grain prices used in the Index are initial prices only for wheat, oats and barley. [4] Barley No. 1 feed; hogs grade "B" alive. [5] Price of 100 lbs. good steer as a percentage of the price of 100 lbs. live hog, grade B. [6] Price of 100 lbs. good steer as a percentage of the price of 100 lbs. good lamb. [7] Quotations refer to steers of all weights. [8] Grade "B1" hogs. **Sources: Price Index Numbers of Commodities and Services Used by Farmers (62-004); Farm Wages in Canada (21-002) Occasional; Coarse Grains Quarterly (22-001), D.B.S. and Livestock and Meat Trade Report, Dept. of Agriculture.**

[1] Overseas clearances plus U.S. imports for domestic use compiled from returns of Canadian elevator licensees and advice from American grain correspondents. [2] Customs exports are adjusted to reflect actual physical movement of wheat and wheat flour from Canada. Data shown for the last three months are not so adjusted. [3] Annual data are monthly averages of crop year. [4] Includes eggs for hatching. **Sources: Coarse Grains Quarterly (22-001), Wheat Review (22-005), and Trade of Canada, Exports (65-004), D. B. S.**

---

[1] Total value of retail trade seasonally adjusted includes department store sales, general merchandise store sales and sales of all other stores. Due to changes in definition of department stores and the introduction of general merchandise stores, formerly included in all other stores, the unadjusted data for 1968 are not comparable with the data of previous years; general merchandise store sales in January 1968 were $42,730,000.

Table 85: value of retail trade by type of business and province, based on the 1960 standard industrial classification – concluded

*Credit extended mainly to individuals; includes unidentifiable amounts of credit extended for non-consumer purposes; excludes certain forms, mainly service credit extended by doctors, dentists, lawyers, pawnbrokers, travel companies, restaurants and personal credit for which no statistics are available. [1] Conditional sales agreements held in connection with the financing of retail purchases of consumers' goods and repaid in instalments. [2] Companies licensed under the Small Loans Act and affiliated compagnies engaged in making personal loans. [3] Cash loans with no conditional sales contract but usually repaid in instalments. [4] Personal loans other than those fully secured by marketable bonds and stocks and other than home improvement loans. [5] Loans other than secured loans and mortgage loans. [6] Figures for dates other than year-end are estimated on the basis of loans made by sixteen companies. [7] Sum of instalment credit of clothing, hardware and jewellery stores, fuel dealers and "all other trades" in Table 89. [8] Sum of charge accounts of clothing, hardware, independent grocery and combination stores, jewellery and general stores, fuel dealers, garages and filling stations and "all other trades" in Table 89. [9] Amount owing to oil companies ex commercial accounts. [10] Excludes mortgage loans; data available yearly only. [11] The data for Quebec savings banks loans and motor vehicle dealers are not seasonally adjusted as no seasonality is present; these series are repeated in the unadjusted form. **Sources: Credit Statistics (61-004), D.B.S.; Bank of Canada, Dept. of Insurance, Dept. of Finance and Dept. of Agriculture.**

[1] The figures in the first four columns, i.e. all countries, United States, United Kingdom and all other countries, for the period April 1966 through July 1967 have been revised to account for delays in the receipts of customs documents. The revisions have not been extended to columns of figures for other countries, and their sum differs from the revised "all other countries" and "Total Imports" shown in this table. [2] Includes Belgium, Luxembourg, France, Germany, Italy and Netherlands.

[1] Column numbers refer to tables 93 and 94. [2] Includes special transaction-trade, not shown separately. [3] Includes scrap. [4] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [5] Total imports revised to account for delays in the receipts of customs documents for the period April 1966 – July 1967 are: in 1966, April (822.4), May (938.4), June (900.6), July (792.8), August (818.2), Sept. (825.6), Oct. (936.2), Nov. (961.0), Dec. (872.0) and in 1967, Jan. (873.7), Feb. (766.4), March (851.8), April (944.6), May (1,053.9), June (977.5) and July (915.8).

[1] Includes Class I and Class II carriers only. These are trucking firms having $100, 000 or more gross annual operating revenues. [4] Includes Class I carriers ıly. These are carriers having $100, 000 or more gross annual revenues primarily from inter-city and rural bus operations. Regular and chartered services are ıcluded. [3] Includes Class I carriers only. These are carriers having $100, 000 or more gross annual revenues primarily from urban transit operations. Data are totals ır motor bus, trolley coach, street car, subway and chartered services. **Sources: Motor Carriers-Freight, Quarterly (53-005), Passenger Bus Statistics (53-002) onthly, and Urban Transit (53-003) monthly, D. B. S.**

[1] Monthly averages for years 1965 and 1966 differ from the averages of the monthly data due to revisions which cannot be allocated by months. [2] Includes scheduled and non-scheduled carriers, groups I to IV. These groups cover all air carriers with gross operating revenues of over $60,000 annually prior to January, 1964 and over $100,000 annually since. [3] United States and other foreign carriers having scheduled services into and out of Canada. Excludes passengers in transit through Canada. [4] Cargo includes air freight and express but excludes mail and excess baggage. [5] Data prior to 1964 do not include bulk transportation. Because of survey limitations, data on bulk transportation after January 1, 1964 refer only to aircraft having a minimum authorized take-off weight on wheels in excess of 18,000 lbs. **Source: Civil Aviation (51-001), D. B. S.**

---

[1] Data from February 1967 onwards for net receipts include gathering and trunk lines. Prior to that date they include trunk lines only. Revenues include both gathering and trunk operations. [2] Excludes distribution systems. [3] Received from field and processing plants by transport systems. **Sources: Oil Pipeline Transport (55-001) and Gas Utilities (55-002), D. B. S.**

---

[1] The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does not nclude failures, sales or seizures carried out under other legislation.The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, rairie provinces and British Columbia from the total. [2] In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made nder this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. **Source: Commercial ailures (61-002) Quarterly, D.B.S.** *167,333 **258,935 ***108,631

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Mainly deposits of foreign banks. [3] Capital, rest fund and undivided profits as at the latest fiscal year-end. [4] Including issues payable in foreign currency. [5] Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. [6] Excluding Canadian day-to-day loans. [7] Loans to grain dealers and exporters. [8] Loans to finance purchase of Canada Savings Bonds at time of issue. [9] Total of foreign funds, short term foreign investments and other foreign currency assets less foreign currency liabilities. [10] Including loans to instalment finance companies. **Source: Statistical Summary of Bank of Canada.**

---

[1] The definition of profits before taxes is based mainly on the accounting definition used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by sample of all companies incorporated in Canada (excluding government-owned companies). [2] As is evident from the above footnote, the data reporting unit is the company; the data are therefore not entirely comparable with data where the establishment is the reporting unit. [3] Includes also the furniture and furnishings industry. [4] Includes the primary metal, the metal fabricating, the machinery and the transportation equipment industries. [5] Includes tobacco products, leather and miscellaneous manufacturing industries. [6] Includes also storage and communication industries. [7] Includes agriculture, forestry, fishing and construction. **Source: Corporation Profits (61-003), D. B. S.**

[1]This statement does not include any receipts other than regular budgetary revenues. Excluded for example, are all receipts arising from payments of loans and advances, or from accumulations on annuity, pension and insurance funds. [2]For comparative purposes figures may differ from those previously reported to reflec changes in accounting during 1967-68. Figures are rounded and may not add to totals. [3]March includes supplementary payments arising from the closing of the accounts. **Sources: The Canada Gazette and Dept. of Finance.**

A NOTE TO USERS

Revisions:

Page S-6 and Table 67: Building Permits by Type

Seasonally adjusted data for building permits by type are revised for the entire period commencing with January 1948. The series have been adjusted by the X-11 variant of the United States Bureau of the Census, Method II, seasonal adjustment program. Adjustments made for trading-day variation were derived from actual variations in the data.

Page S-9: Commercial Failures

The series on commercial failures has been adjusted by the X-11 variant of the United States Bureau of the Census, Method II and revised from 1955 onwards. The unadjusted data are unchanged.

NATIONAL ACCOUNTS, INCOME AND EXPENDITURE, FOURTH QUARTER AND PRELIMINARY ANNUAL, 1967

Annual Review

This report incorporates some revisions to data for the years 1964, 1965, 1966 and the first three quarters of 1967, mainly resulting from the availability of new information. The series affected are government revenue and expenditure for the years 1964 on; personal expenditure on consumer goods and services, and wages, salaries, and supplementary labour income starting with 1965 and, business gross fixed capital formation, value of physical change in inventories, corporation profits, and capital consumption allowances and miscellaneous valuation adjustments for the year 1966 and the first three quarters of 1967.

A seventh consecutive year of expansion carried the gross national product to a level of $62.1 billion in 1967, an increase of 6.8 per cent following the exceptionally large advance of 11.3 per cent of the previous year. Prices continued to rise, but at a somewhat lower rate than in 1966 – 3.9 per cent compared with 4.5; the gain in real terms was reduced to 2.8 per cent. A dampening influence on GNP was exerted by a western grain crop much smaller than the record crop of 1966 which bolstered that year's rise; excluding the accrued net income of farm operators, the advance in GNP in value terms was 8 per cent in 1967 compared with 10.5 per cent in 1966.

For the year as a whole, the general profile of the economy was one of a widespread easing of demand pressures. Every major expenditure category showed a lower rate of increase than in 1966 except business gross fixed capital formation which dropped by 1 per cent; within this category divergent movements occurred, with residential construction expenditures rising much more strongly than in the prior year and outlays on plant and equipment declining by 3.5 and 2 per cent respectively.

Within the year, the pace of expansion in GNP was somewhat uneven – 2 per cent in each of the first two quarters, one-half of one per cent in the third and 1 per cent in the fourth. Personal expenditure rose continuously during the year while the capital formation aggregate declined throughout; other components displayed fluctuations, with considerable volatility occurring in non-farm inventories and in the external sector.

A major source of strength was personal expenditure; buoyed up by outlays related to Expo, it increased by over 8 per cent, not much lower than the 1966 rate of advance. Both non-durables and services continued to show strength, while durables advanced only moderately in spite of a 3 per cent rise in new and used car purchases which showed no change in the prior year. In real terms, the advance in total spending of over 4.5 per cent was also close to the gain of last year. However, there was a shift in price movements; food prices were virtually unchanged, while a pronounced degree of price acceleration in durables and services accounted for half the increase in value terms.

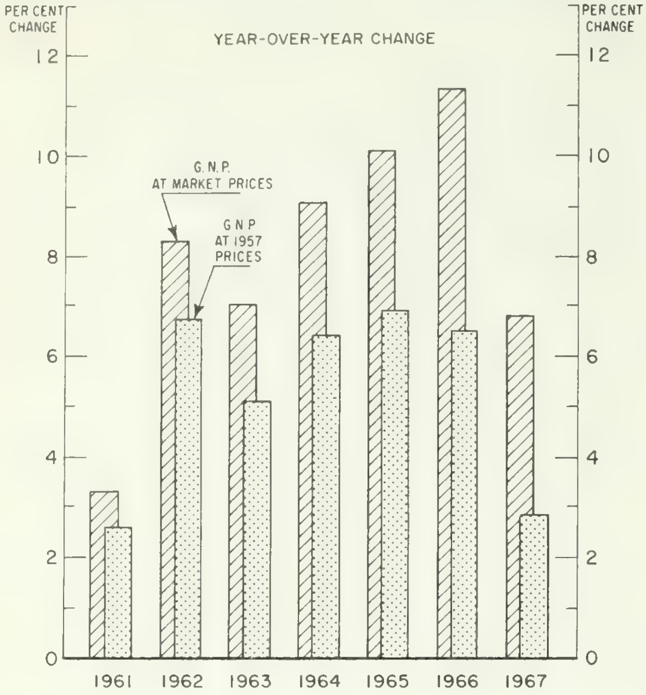
Developments in the external sector were among the highlights of the year. The current account deficit on a national accounts basis narrowed substantially to $549 million from $1,207 million in 1966, as exports of goods and services increased by 11.5 per cent while imports advanced 6 per cent overall but declined in the last two quarters. An increase in merchandise exports of 10.5 per cent combined with an 8 per cent advance in imports more than doubled the merchandise surplus to $480 million. Exports to the United States, where economic activity quickened in the second half of the year after a slowdown in the first half, rose 17 per cent while imports advanced 12.5 per cent, substantially reducing the trade deficit; notable also was an increase of 45 per cent in exports to Japan. On non-merchandise transactions, receipts increased by over 17 per cent while payments rose barely 2 per cent; thus the deficit was reduced by $402 million. Prominent in this development was the Expo-affected tourist and travel account which switched from a deficit of $63 million to a surplus of $427 million, only the second surplus since 1950.

Government expenditures on goods and services rose considerably less than in 1966 – 9.5 per cent compared with 17.5. All levels of government reflected the reduced rate of advance: at the federal level, the rise was 8.5 per cent as against 19 per cent, while the increase at the provincial-municipal level was 10 per cent compared with 16.5 per cent. Inclusive of contributions to the Canada and Quebec Pension Plans, the combined government surplus was reduced by more than half, to $157 million. Excluding the pension plan contributions the provincial-municipal deficit narrowed by $62 million while the federal government switched from a small surplus to a deficit of $256 million.

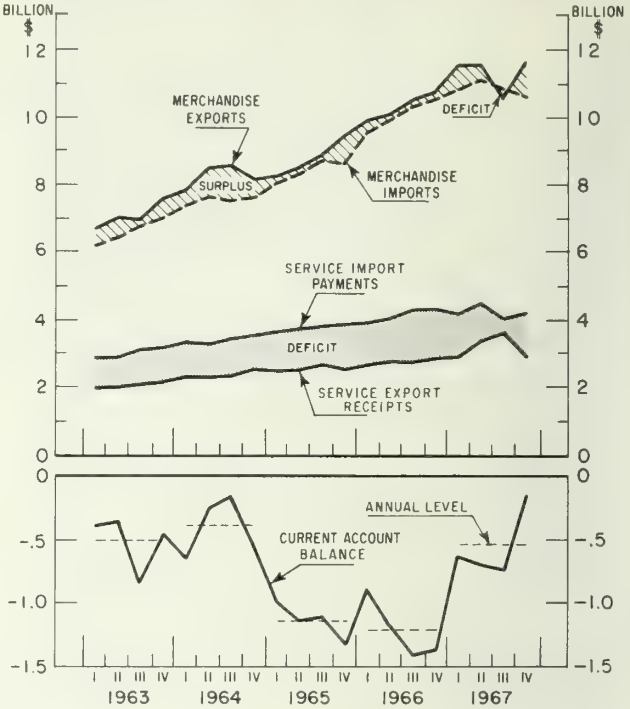
Notable differences from the pattern of the previous year occurred among the components of business gross fixed capital formation. Expenditures on new residential construction advanced 7.5 per cent, up sharply from 2 per cent in 1966. Aided by developments in the money market and government action relating to interest rates on NHA – approved loans and to CMHC direct loans to builders in the spring, housing starts jumped sharply in the second quarter and remained near this level in the latter half of the year. For the year, starts increased to 164,000, some 30,000 units over 1966. This was heavily concentrated in multiple units which rose to 92,000; single family unit starts advanced by 2,000.

In striking contrast, investment in plant and equipment declined by 3 per cent after annual increases of over 20 per cent in the period 1964-66.

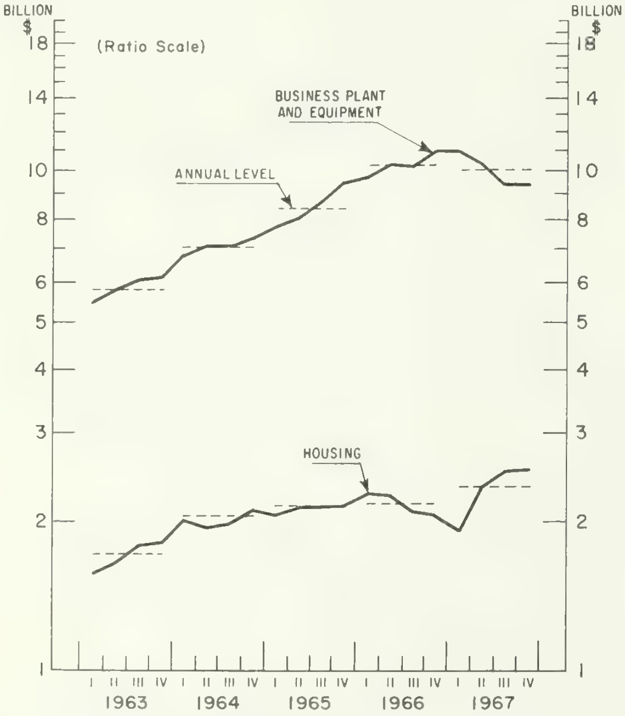
IN 1967 G.N.P. INCREASED BY 6.8 PER CENT. A RISE OF 3.9 PER CENT IN PRICE REDUCED THIS GAIN TO 2.8 PER CENT IN REAL TERMS



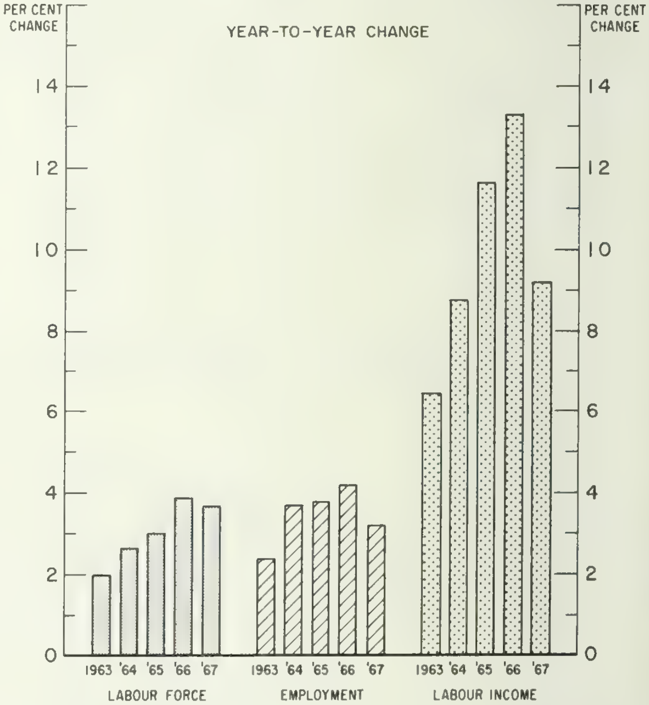
THE CURRENT ACCOUNT DEFICIT DROPPED AS A HIGHER SURPLUS ON THE MERCHANDISE BALANCE REINFORCED THE EXPO EFFECT OF A LOWER DEFICIT IN THE NON-MERCHANDISE BALANCE



BUSINESS SPENDING ON PLANT AND EQUIPMENT FELL 2.8 PER CENT IN 1967. HOUSING OUTLAYS, HOWEVER, CLIMBED 7.6 PER CENT



EXPANSION IN LABOUR FORCE, EMPLOYMENT AND LABOUR INCOME SLOWED DOWN IN 1967. THE RATE AND LEVEL OF UNEMPLOYMENT ROSE AS THE YEAR'S GAIN IN EMPLOYMENT FELL BELOW THE INCREASE IN LABOUR FORCE



QUARTERLY DATA, SEASONALLY ADJUSTED, AT ANNUAL RATES

A small decline in the first quarter deepened substantially in the next two before moderating in the fourth quarter; in the last three months of 1967, such investment was running 16 per cent below the peak of the fourth quarter of 1966. Movements in the two components diverged somewhat: non-residential construction declined for the first three quarters before recovering in the fourth, while machinery and equipment declined in the last three quarters after a small increase in the first. With the exception of investment in manufacturing, outlays on plant and equipment ran slightly ahead of last year; however, manufacturing investment declined by 14 per cent with drops of 9 and 19.5 per cent in non-durables and durables respectively.

An anticipated 1.5 per cent rise in business capital formation is revealed in the 1968 investment intentions survey, with the entire increase coming from a 9.5 per cent rise in residential construction; outlays on plant and equipment are expected to be virtually unchanged, with a 1 per cent increase in non-residential construction offset by a 1 per cent decline in machinery and equipment.

Investment in non-farm business inventories showed a small increase for the year, but was almost $600 million below the accumulation of 1966. Over three quarters of the reduction was at the manufacturing level, where durables shifted from sizeable accumulation to moderate liquidation, but reduced investment also occurred at the retail and wholesale levels. Considerable accumulation in the third quarter followed two quarters of moderate investment; however, this gave way to liquidation in the fourth quarter.

The following table summarizes the pattern of demand and the sources of supply for the last three years. Interesting to note is the relative decline of imports in 1967 as a source of supply for the increase in demand.

Demand and its Sources of Supply

Value of change from preceding year[1]

	1965	1966	1967
	billions of dollars		
Demand:			
Persons	2.4	2.8	2.9
Government	1.0	1.7	1.1

Increase in demand	6.2	7.8	4.8
Supply:			
National production[2]	4.8	5.9	3.9
Imports	1.4	1.9	0.9
Increase in supply	6.2	7.8	4.8
Percentage of increased demand met by imports %	23	24	18

---

[1] Components will not necessarily sum to totals because of rounding.

[2] GNP inclusive of the residual error of estimate.

Implicit in the aggregates of the income side are some significant developments relating to output and employment. Excluding agriculture, the gain in output as measured by the indexes of real domestic product was slightly more than 3 per cent; the increase in services was somewhat lower than in the last two years, while the rise in the goods-producing sector was much reduced largely due to an increase of only one half of 1 per cent in durable manufacturing. As a result, there was a considerable shift in the composition of output, with services accounting for over two thirds of the increase as compared with two fifths in the two previous years. The labour force increased almost as rapidly as in 1966, but employment rose by a substantially lesser amount and remained virtually stationary in the latter half of the year. The industrial composite employment index recorded a 1.5 per cent advance, while declines occurred in the durable manufacturing and construction indexes. The bulk of the increase in employment occurred in the service sector; with greater job opportunities for woman in this area, the rise in female employment was much larger than that for man — 6 per cent as against 2 per cent — and for the first time since 1961 women accounted for more than half the total increase. The unemployment rate rose from 3.6 per cent in 1966 to 4.1 per cent, and reached 4.7 per cent during the last quarter before declining somewhat in early 1968.

Labour income increased by over 9 per cent, reduced from the exceptionally large 13.5 per cent rise of 1966; almost three quarters of the advance occurred in the service-producing sector, while pay increases in both goods and services were greater than last year. Preliminary indications are that the increase in output per person employed in the commercial non-agricultural industries during 1967 was lower than that of 1966, itself a below-average year. Unit costs continued to rise and were partly absorbed by profit margins; gross profits advanced 1 per cent compared with 3 per cent in 1966, while net profits declined a further 2.5 per cent after a 1 per cent decline previously.

A special feature of 1967 was agriculture. The value of the grain crop was some 22 per cent lower than the value of the record 1966 crop. Reflecting this, accrued net income of farm operators declined 23 per cent after the 34 per cent increase of 1966, though it was some 3 per cent higher than in the less exceptional year of 1965. An unusual development, however, was a break in the downward trend of agricultural employment which increased for the first time since 1954; combined with lower production, this resulted in a very substantial reduction in output per person employed.

Price Movements

Price increases in 1967, though somewhat lower than in the previous year, were still strong and widespread. Overall prices as measured by the implicit price index of Gross National Expenditure rose 3.9 per cent compared with 5.4 per cent in 1966. Quarterly price movements reveal a deceleration in the second part of the year and especially in the last quarter. The year-to-year movements in the implicit price indexes of the major components of Gross National Expenditure are shown in the following table:

Implicit Price Indexes

Percentage change from the previous year

	1962	1963	1964	1965	1966	1967
Personal expenditure	1.3	1.6	1.5	1.9	3.5	3.3
Non-durable goods	1.2	1.7	1.7	1.9	4.1	1.9
Durable goods	− 0.2	0.3	− 1.0	− 0.3	—	2.6
Total goods	0.9	1.4	1.0	1.5	3.2	2.2
Of which: Food	2.0	2.6	1.6	2.6	6.2	0.1
Non-food goods	0.2	0.7	0.9	0.9	1.9	3.3
Services excluding net expenditure abroad	1.7	1.4	2.3	2.9	3.9	5.7
(Personal expenditure excluding food)	(1.0)	(1.1)	(1.6)	(1.7)	(2.8)	(4.2)
Government expenditure	2.7	4.1	3.2	5.0	5.9	6.2
Business gross fixed capital formation	2.8	3.1	4.4	4.3	3.8	2.3
Residential construction	2.9	3.4	5.5	5.0	6.0	7.2
Non-residential construction	2.2	3.4	4.4	6.1	5.4	5.0
Machinery and equipment	3.0	2.6	3.8	2.7	2.1	− 1.8
Exports	3.1	1.2	2.0	1.4	3.2	1.7
Imports	4.1	2.9	1.2	0.4	2.0	1.2
Gross National Expenditure	1.5	1.8	2.6	3.0	4.5	3.9

The most striking increases occurred in non-food goods, in services, government expenditure and in construction. Within non-food goods there was an increase in the price of durables, reversing the apparent trend of the last few years towards slowly declining prices. Virtually unchanged food prices — after the strong rises of previous years culminating with a 6.2 per cent increase in 1966 — exerted a moderating influence on the overall price advance. Another notable factor dampening overall price pressure was the decline in machinery and equipment prices.

In personal expenditures all major non-food categories showed accelerating rates of price increase. These price increases were in part a reflection of increased indirect taxes by all levels of government. The rise in durable goods prices started in the second quarter and was maintained at a somewhat slower rate through the rest of the year. Particularly notable were the more than 5 per cent rise in the prices of furniture and miscellaneous durables and the 1.6 rise in car prices. There was a marked acceleration in the rate of price increase of non-durables other than food; many major items such as clothing, newspapers and magazines, electricity, tobacco, and gasoline, grease and oil showed increases of between 3 and 7 per cent. The implicit index for services rose by 5.7 per cent, the strongest increase in many years. Most prominent were the increases in prices associated with medical care, recreation, education and transportation. Rents also rose strongly, continuing the acceleration noted in

1966. Within food, the rate of price increase of most components was reduced, while some items – pork, poultry, eggs, and fresh vegetables declined sharply.

More than half of the very strong rises in the implicit price indexes for both residential and non-residential construction was largely attributable to labour cost for the second successive year. Machinery and equipment prices declined for the first time since the current expansion began in 1961; this resulted from the complete removal in June of the federal sales tax on production machinery and equipment.

The increase in export prices was more moderate than in the previous year. Some important components showed price declines, notably wheat, and meat and meat preparations.

The Components of Demand

Personal Expenditure on Consumer Goods and Services

Personal Expenditure on goods and services reached a level of $37.7 billion in 1967, an increase of some 8 per cent compared with 8.5 per cent in the preceding year. Expo and other centennial events had a considerable part in this rise, though it should be noted that the large expenditures made by foreign tourists are not included in this aggregate.[1]

The large increase in non-durables was broadly based, but especially notable were rises of some 11 per cent in alcoholic beverage purchases, 10 per cent in outlays on energy sources and 9 per cent on drugs and cosmetics. Total food outlays increased at a lower rate than in 1966 – 6 per cent as against 7 – with prices increasing only fractionally after a 6 per cent advance previously. The gain in volume terms, however, was significantly larger.

The slightly higher rate of advance in durables in 1967, 4.5 as against 4 per cent, was due to a 3 per cent gain in new and used car purchases which showed no change in 1966. All other components had lower rates of increase than in the previous years, with furniture rising by 4 per cent, home furnishings by 8 per cent, and radios and appliances by 7 per cent. If price increases are allowed for, the real increase in durables outlays in 1967 was half the increase of the previous year.

The 11.5 per cent increase in services in services excluding net expenditure abroad[1] was also broadly based, but the most pronounced increases were in the series affected by Expo. Recreation expenditures soared by almost 30 per cent, while outlays on purchased transportation rose by over 19 per cent. Other significant advances were registered in medical outlays and household operations (10.5 per cent each) and in the shelter component (9 per cent). Also noticeable were sharp increases in price, which accounted for fully half the overall rise.

---

Home furnishings	11.6	8.9	9.4	7.8
Radios and appliances	7.9	8.5	10.9	7.0
Total goods	7.3	8.1	8.5	8.3
Total services (including net expenditure abroad)	9.0	8.0	8.9	8.1[1]
Shelter	6.3	6.8	8.5	8.8
Total transportation	7.4	7.9	7.9	14.3
Household operations	9.9	9.2	10.7	10.7
Total personal expenditure	7.9	8.1	8.7	8.2

[1] Personal expenditure on consumer goods and services is a measure of all expenditures by Canadian residents, including those temporarily abroad. Since measures of the value of outlays on consumer goods and services in Canada are derived from sales made within the territorial boundaries of Canada, the values must be adjusted to include expenditures abroad by Canadian residents and to exclude outlays in Canada by non-residents. This adjustment is called **Net expenditure abroad.** Net expenditure abroad is composed of outlays on both commodities and services. As it is impossible to determine these elements in the net figures, the whole adjustment has traditionally been included with services. The item is generally small and does not significantly distort period-to-period comparisons of either aggregates or individual series However, with the exceptional influx of tourists occurring in the second and third quarters of 1967, the adjustment to exclude purchases by non-residents has become large, distorting the analytical continuity of the non-durable and services aggregates and certain of their components.

Business Gross Fixed Capital Formation

Business gross fixed capital formation including housing totalled $12.4 billion in 1967, a decline of 1 per cent from the revised 1966 level. While outlays for new housing advanced 7.5 per cent, business expenditure on plant and equipment fell by 3 per cent consisting of declines of 3.5 per cent and 2 per cent respectively in non-residential buildings and structures and in machinery and equipment. These decreases resulted from a considerable falling-off in investment activity by manufacturers both durables and non-durables, and by service establishments. Declines occurred in all four quarters, though outlays on structures recovered somewhat in the last three months of the year.

The diminution of 2 per cent in new machinery and equipment outlays from the final 1966 estimates (revised upward) reflected major cutbacks by manufacturers. The sharp drop of 3.5 per cent in non-residential building and engineering construction expenditures in 1967 was associated with decreases for all industries except agriculture and, notably, electric power. However, the service industry expenditure decline was confined to the commercial sector, with university and hospital construction continuing its upward course.

A number of fiscal measures were effected in 1967 to prevent a larger decline in business investment expenditures. The sales tax on production machinery and apparatus was lowered from 11 to 6 percentage points in April and completely removed in June. Other measures included the termination on March 31, 1967 of the refundable tax on business profits and the removal of the previous year's measure regarding capital cost allowances.

The value of new residential construction rose by 7.5 per cent between 1966 and 1967 to a level of $2.3 billion. However, completions actually fell by close to 9 per cent from 162,000 to 149,000 units as a consequence of the low carryover of units under construction (89,000) at the beginning of the year. By the end of 1967, units under construction had risen to 103,000. Starts eased from a peak annual rate of 174,000 in the second quarter to 168,000 in the fourth, still well above the 1966 level of 134,000; the total number of starts for 1967 was 164,000.

The following table shows that, although total mortgage approvals increased from the low 1966 level, the major part of the improvement was the result of increased lending by approved lenders under the National Housing Act and continued provision of funds by CMHC. In particular, as a result of changes in the Bank Act in May of the year, chartered banks figured prominently in the mortgage market for the first time. Conventional mortgage lending, although up for the year, remained substantially below the 1965 level despite rises in interest rates during the year.

Mortgage Loan Approvals Gross Basis

Dwelling units

	1965	1966	1967
Under National Housing Act:			
Approved lenders	25,516	14,567	27,154
Central Mortgage and Housing Corporation	33,942	37,560	42,689
Sub-totals	**59,458**	**52,127**	**69,843**
Conventional lenders	90,221	54,489	68,586
Totals	**149,679**	**106,616**	**138,429**

Investment in Non-farm Business Inventories

Investment in non-farm business inventories showed an accumulation of $189 million in 1967, a sharp drop from the $777 million accumulation of the previous year. In the first half of the year there was a moderate accumulation, while a notable build-up followed by a sharp liquidation occurred in the latter half.

Manufacturing contributed about 20 per cent to the total accumulation in 1967. This was entirely concentrated in the investment of non-durable goods-producing industries, which more than offset a noticeable liquidation in the stocks of durable goods. Mixed movements occurred in the components of both durables and non-durables. The stock-to-shipments ratio for the year as a whole was much above the average ratio of the previous year.

Investment in wholesale trade contributed about 50 per cent to the total accumulation of non-farm business inventories in 1967. The accumulation in wholesale took place entirely in the stocks of durable goods. In non-durable goods there was a slight liquidation resulting from mixed movements in the components. The stock-to-sales ratio for the year was higher than in 1966.

About 20 per cent of the total increase in the investment of business inventories occurred in retail trade. This stock building was mainly concentrated in durable goods with the exception of stocks of motor vehicle dealers which showed a moderate depletion. At the total level in non-durable lines, there was a small build-up, with a noticeable accumulation in the stocks of food dealers offsetting a general liquidation in most other categories. The stock-to-sales ratio for the year was lower than in the previous year.

Value of Physical Change in Non-farm Business Inventories

	Seasonally adjusted at annual rates, 1967				1966	1967	1967 minus 1966

Exports and Imports of Goods and Services

Canada's exports of goods and services rose to $14.6 billion in 1967, an increase of 11.5 per cent over the level of 1966. At the same time, imports of goods and services rose 6 per cent. Thus, the improvement in the deficit on international current account from $1.2 to $0.5 billion (on a national accounts basis) was one of the feature developments of the year. Improvement in the deficit was attributable to an increase in the balance on merchandise trade of $256 million, dramatically reinforced by a contraction of the deficit on non-merchandise trade of $402 million.

Merchandise exports rose in the first half of the year, dropped sharply in the third quarter, and moved to a peak in the fourth quarter. At $11.4 billion for the year, they were 10.5 per cent higher than in 1966. Trade of Canada figures for domestic exports show a gain of $1,051 million in United States markets. Of this increase, $963 million was in end products, in particular, cars and trucks, engines and parts, as well as aircraft engines and parts. A sharp drop in sales of wheat to Eastern Europe and Asia, in particular to the Soviet Union and China, was offset by very large increases in in exports to Japan, Italy and the Netherlands.

Merchandise imports reached a peak in the second quarter and declined during the second half of 1967. At $10.9 billion, they were about 8 per cent higher than in 1966. Trade of Canada revised data attribute $752 million of the $802 million increase to the United States suppliers. Increased imports of automotive products accounted for more than 70 per cent of the rise. Other important items included aircraft with engines and parts, and crude petroleum.

Exports and Imports of Goods and Services

	Goods			Services			Current balance
	Exports	Imports	Net	Exports	Imports	Net	
	millions of dollars						
1963	7,082	6,579	503	2,029	3,039	- 1,010	- 507
1964	8,238	7,537	701	2,340	3,433	- 1,093	- 392
1965	8,745	8,627	118	2,520	3,773	- 1,253	- 1,135
1966	10,326	10,102	224	2,747	4,178	- 1,431	- 1,207
1967	11,385	10,905	480	3,223	4,252	- 1,029	- 549
1966-67 (per cent)	10.3	7.9		17.3	1.8		

Turning to consider the service acccunt, receipts rose nearly 17.5 per cent, payments by less than 2 per cent. The major factor was the turnaround in the net tourist and travel account from a deficit of $63 million to a surplus of $427 million. This was only the second surplus since 1950; in 1963 there was a modest positive balance of $24 million.

The remarkable lift of Expo and other centennial activities along with a small decline in the deficit in freight and shipping transactions offset a drop in gold production available for export, higher official contribution payments, and larger deficits for income, business and other govermental transactions.

[3] Components will not necessarily sum to totals because of roundings.

The Government Sector

Total revenue of all governments combined (excluding intergovernmental transfers) rose by $2,265 million to $21.3 billion, an increase of nearly 12 per cent. Of this, $167 million were higher revenues of the Canada and Quebec Pension Plans. Total expenditure rose somewhat more, $2,456 million, or 13 per cent, so that the overall surplus, on a national accounts basis, declined from $348 to $157 million.

On the revenue side, direct taxes increased by nearly $1 billion or 14 per cent. Personal direct tax, almost all income tax, increased by rather more than than this, while corporation tax revenue decreased slightly. The proportionately greater income of the provincial governments from these sources was the result of increased abatements to the provinces from the federal government. Part of the increase in personal direct taxes at the federal level can be attributed to the doubling of the maximum old age security tax on personal income imposed at the beginning of the year.

In indirect taxes the rise of $761 million, or 9 per cent, went mainly to the provincial and municipal governments, with the federal government receiving only one-sixth. At the provincial level, larger sales tax revenue accounted for most of the increase, with higher rates levied in Quebec, New Brunswick and Newfoundland, and the introduction of a sales tax in Manitoba. The only other large gain was in gasoline taxes. The rise in municipal indirect tax revenue resulted from an 11.5 per cent increase in property taxes. The smaller rise in federal indirect tax revenue came mainly from an increase of 1 per cent in the sales tax rate, partially offset by the abolition of sales tax on production machinery and equipment and drugs during the year.

In expenditures, total outlays on goods and services rose by over $1 billion, with each of the three levels of government increasing its spending by about the same amount. At each level of government this was mainly caused by increases in wages and salaries, with capital formation rising more slowly than the previous year. Transfer payments rose by $1.3 billion, with large increases in Old Age Security Fund payments resulting from the lower age limit and the introduction of the guaranteed minimum monthly income supplement to old age security recipients, and in hospital and education grants. Smaller increases occurred in employment benefits and Workmen's Compensation benefits.

With the inception of the Canada Assistance Plan, and higher transfers under taxation aggreements, transfers from the federal government to the provincial and municipal governments rose by $330 million.

Thus, with federal expenditures increasing by nearly 13 per cent while revenues were rising by 8.5 per cent, the federal surplus of $164 million in 1966 became a deficit of $256 million in 1967. At the provincial-municipal level the deficit eased from $535 million in 1966 to $473 million in 1967.

The Components of Income

Labour Income

Labour income was more than 9 per cent higher in 1967 than in 1966. Most of the increases reflected higher average earnings, largely the result of higher rates of pay. The increase in the number of employees was less than in the previous year.

Continuing the trend established in the latter half of 1966, labour income in the service-producing sector advanced more rapidly than in the goods-producing sector. The increase in the service-producing industries of 12 per cent, slightly higher than last year, accounted for almost three-quarters of the increase in total wages and salaries, compared with slightly more than one-half of last year's increase. The largest relative gains in wages and salaries were recorded in public utilities (15.5 per cent), service (13 per cent), and transportation, storage and communication (12 per cent). Increases in average weekly earnings were greater this year than last, offsetting a slightly reduced rate of increase in employment. This trend was common to most components.

Government wages and salaries rose by almost 14 per cent in 1967; provincial government payrolls showed a greater increase than the federal government, 20 per cent compared with 10.5 per cent. Municipal government payrolls rose by about 12 per cent over the year.

In the goods-producing sector, wages and salaries increased by approximately 6 per cent as compared to about 13.5 per cent in 1966. The primary industries showed an increase of 7 per cent, about the same rate as last year. Within the group, wages and salaries in mining increased faster than in 1966, in spite of lower average hours worked and a lower rate of increase in employment. Declining rates of increase were recorded in the other primary industries. Manufacturing wages and salaries advanced by about 6 per cent, compared with 11.5 per cent in 1966. Employment in this industry showed little change for the year, and average hours worked were lower, but the increase in average hourly earnings was somewhat greater than in 1966. Wages and salaries in construction were about 4 per cent higher than last year, as compared with increases of almost 25 per cent in both 1965 and 1966. The slowdown in the rate of increase was the result of declines in employment and in average weekly hours worked, although average hourly earnings increased at a slightly faster rate than in the prior year.

Corporation Profits

Net corporation profits declined a further 2.5 per cent in 1967 following a 1 per cent dip in the previous year. However, these annual levels conceal some fluctuations within the period. A rising trend in profits came to a high point in the first quarter of 1966 and was followed for several quarters by movements around a generally declining trend. Profits have moved upward through the last three quarters of 1967, but are still slightly below the first quarter 1966 peak.

Three factors influenced the fluctuations of the last two years. First, the drop in profits in the third quarter of 1966 was reinforced by a number of strikes in the economy. Second, those rail subsidies which are included in corporation profits were particularly high in the fourth quarter of 1966, and had the effect of bolstering the rise in that quarter. Third, fluctuations in the movements of quarterly capital consumption allowances over the past two years influenced movements in net profits.

Net profits in 1967 were lower in the mining industry by 1 per cent, manufacturing 4 per cent, and wholesale trade 5 per cent. A 21 per cent drop in transportation, storage and communication was related to a significant rise in capital consumption allowances, when a tax ruling was introduced in the early part of the year permitting telephone companies to claim higher allowances than previously permissible. Profits of the utility group expanded nearly 25 per cent, while advances of 6, 7 and 15 per cent respectively were experienced in the retail trade, finance, and service industries.

Within the manufacturing industry, profit changes in 1967 were varied with more declines than gains. The textile, wood, paper, electrical, non-metallic mineral, and chemical categories all marked profit declines. The profits of the rubber, petroleum and coal, and printing and publishing groups progressed from their 1966 level, while little change was noted in the food and beverage, and metal industry profits.

Other Investment Income

Rent, interest and miscellaneous investment income rose by nearly 13 per cent in 1967 compared with about 9 per cent in 1966. Government investment income for all levels combined was higher by $336 million against a rise of $142 million in 1966. About 40 per cent of the increase in government investment income came from higher trading profits of government enterprises. This was mainly at the provincial level, with the trading profits of liquor commissions accounting for about half the rise.

Accrued Net Income of Farm Operators

Accrued net income of farm operators from farm production fell by 23 per cent from the exceptionally high level of the previous year.

Predominant in the decline in the value of grain production was a much smaller grain crop than the record crop of 1966; moreover, Canadian Wheat Board profits were considerably reduced from the record level of 1966, reflecting much lower exports in the third and fourth quarters.

Slightly offsetting this movement were advances in livestock production and higher income from other farm products—mainly dairy products, where subsidies were a factor, and tobacco.

Operating expenses again recorded a moderate increase and contributed further to the decline in net income.

Net income of farm operators from farm production, which is reflected in the personal account, declined by nearly 13 per cent in 1967. The smaller decline in this component resulted from the record high final payments made by the Canadian Wheat Board in the first quarter.

Net Income of Non-farm Unincorporated Business

Net income of non-farm unincorporated business rose to $3,194 million, slightly more than 8 per cent over the 1966 total.

Most industries registered gains over the levels reached in 1966. The service industries alone accounted for just under half the increase—a portion of which was due to Expo—while smaller gains were recorded in retail trade and construction.

Fourth Quarter 1967

Introduction

The Gross National Product increased by 1 per cent in the fourth quarter to reach a level just below $63 billion. After allowing for price increases, almost half of the advance represented a gain in real terms; this compared with a decline of about one-half of one per cent in the volume of production in the previous quarter. There were divergent movements in components of demand and some levelling on the income side.

Personal expenditure increased by $640 million. Government expenditure rose by $400 million to return to the second quarter level; increased outlays by provincial and municipal governments accounted for over three quarters of the advance. New non-residential construction reversed the trend of three previous quarters with an 8.5 per cent advance. However, with residential construction little changed from the third quarter level, the 8.5 per cent decline in machinery and equipment kept the capital formation component as a whole at approximately the same level as in the third quarter. There was a liquidation in inventories of $312 million, three quarters of which occurred at the manufacturing level.

Merchandise exports increased by 11 per cent, all of it going to the United States; the gain was largely in crude and fabricated metals, with little change in automobiles and automotive components. Non-merchandise receipts declined some 19 per cent, with all of the $700 million decline occurring in tourist receipts as Expo came to end in October. The combination of an overall rise of 3 per cent in exports and a 1 per cent decline in imports resulted in a current account deficit of $152 million, the lowest deficit since the surpluses of the first three quarters of 1952.

Some slowdown in the rate of increase of labour income was the most notable development on the income side, the 1 per cent rise being the smallest since the first quarter of 1961. A fractional drop in employment occurred in the quarter while unemployment increased from 4.1 to 4.6 per cent.

Price Movements

As measured by the base weighted price index of GNE, prices advanced by 0.7 per cent in the fourth quarter; this compared with a 1.0 per cent increase in the third. Significantly slowing down the aggregate index were lower rates of increase in all major components of personal expenditures except durables. Business gross fixed capital formation, exports and imports all showed stronger movements this quarter than in the last two.

The softening in the rate of increase in consumer prices was most apparent in non-food non-durable goods, which did not increase at all. There was a fall in the price of women's clothing and a further decline in drug prices due to the removal of the federal sales tax on pharmaceuticals last September. Food prices rose by 0.8 per cent, significantly lower than the 2.0 per cent rise registered in the previous quarter. Seasonally adjusted data reveal that last quarter's strong increase was based in dairy products, cereal products, beef, fresh fruits and fresh vegetables. All these items except beef showed lower rates of price increase in the current

Base Weighted Price Indexes — Seasonally Adjusted[1]

[1] Beginning with the third quarter the analysis of price movements is based on a new base weighted price index. It is felt that this improves analysis. Previously the table summarizing percentage price change was based on implicit price indexes derived from seasonally adjusted constant dollar aggregates. Implicit prices are affected by changes in current expenditure patterns as well as price, so that often an adjustment for weighting shifts is required in order to obtain a true picture of price change. The new index is weighted with expenditure patterns for the year 1966. For the most part the prices used are the seasonally adjusted prices used to derive seasonally adjusted constant dollars. In addition, the seasonally adjusted price detail used for the government index has been substantially improved.

[2] Quarter-to-quarter changes in this component are not necessarily analytically significant owing to incomplete price data.

period. Within services, prices of purchased transportation and recreation fell, while rents showed less of an increase than previously. For the third consecutive quarter, durable goods registered a very strong price increase of about 1 per cent. As in the last two quarters, increases in new car prices accounted for much of the increase but other durables also increased strongly. In contrast do most components, household appliances and radios declined slightly.

Within business gross fixed capital formation, machinery and equipment prices, which had been declining sharply in the second and third quarters largely as a result of the removal in June of the federal sales tax on production machinery, remained stable at these lower levels. Prices associated with construction showed increases, most of which were due to increases in the labour cost components of the indexes.

The most notable price rises in merchandise exports were recorded in crude vegetable materials, lumber, copper, nickel, and zinc.

The Components of Demand

Personal expenditure reached a level of $38.8 billion, seasonally adjusted at annual rates, an increase of about 1.5 per cent as compared with a 2 per cent rise in the previous quarter. The total includes the adjusting item "net expenditure abroad", which swung sharply as Expo and other centennial events came to an end;[2] the impact of the net non-resident spending is shown in the following table:

Millions of Dollars, Seasonally Adjusted at Annual Rates, 1967

	1 Q	2 Q	3 Q	4 Q	Quarter-to-quarter change		
					1 Q-2 Q	2 Q-3 Q	3 Q-4 Q
Non-durables	17,768	18,388	18,844	18,952	620	456	108
Durables	4,136	4,408	4,544	4,372	272	136	- 172
Services (ex NEA)	14,500	15,132	15,672	15,608	632	540	- 64
Total personal expenditure in Canada	36,404	37,928	39,060	38,932	1,524	1,132	- 128
Net expenditure abroad	40	- 540	- 868	- 100	- 580	- 328	768
Personal expenditure	36,444	37,388	38,192	38,832	944	804	640

Non-durables and services both contributed to the advance. However, certain of their components are affected by the shift in net expenditure abroad, thereby qualifying their analytical usefulness.

After two quarters of increase, durable goods turned down by some 4 per cent, reflecting a 7 per cent decline in net purchases of new and used cars; excluding this category durables rose fractionally.

Mixed movements occurred among non-durable components. Increases occurred in tobacco (5.5 per cent) and liquor (1.5 per cent) which were affected by new excise taxes introduced in the November budget; expenditures on energy sources (fuel, electricity and gas) rose by 3 per cent and on household non-durables by one-half of one per cent. Outlays on clothing declined by 1.5 per cent as a 3 per cent decline in women's and children's clothing outweighed increases of 1.5 per cent and one-half per cent in footwear and men's clothing respectively. Declines of about 1 per cent occurred in both gasoline, oil and grease, and in food, with the latter affected in the meals sub-series by the end of Expo.

The fractional decline in services inclusive of net non-resident spending was confined to the Expo-affected series, though the Montreal transit strike also contributed to the 3.5 per cent decline in purchased transporation. After the exceptional increases of the previous two quarters, the 17.5 per cent decline in recreation was quite natural; also registering decreases were user-operated transportation (2.5 per cent) and miscellaneous services where hotel and motel accommodations are included (1 per cent). Increases of about 2 per cent were noted in medical care, household operations, and shelter.

Business gross fixed capital formation dropped by one-half of one per cent in the fourth quarter, continuing the quarterly declines from the peak fourth quarter 1966 level.

Expansion was recorded in both the construction components, with a sharp step-up of 8.5 per cent in non-residential buildings and structures, and a small advance of one-half per cent in residential outlays. However, investment in machinery and equipment dropped by 8.5 per cent and more than outweighed the increases in the other components.

---

[2] See footnote to table on page v.

Housing outlays increased only slightly in the last quarter of 1967. While dwelling starts dropped slightly to an adjusted annual rate of 168,000 units, completions moved up from 156,000 to 170,000 units – a feedback from the high levels of starts in the spring and summer months.

The sizeable decline in demand for machinery and equipment was reflected in lower shipments of producer's durables as well as lower imports of non-farm machinery.

In contrast with the pronounced rate of accumulation in non-farm business inventories evident in the third quarter of 1967, a sharp liquidation took place in the fourth quarter, mainly at the manufacturing level. Seasonally adjusted estimates show a liquidation of $312 million at annual rates, compared with a build-up of $684 million in the previous quarter.

The decline in the stocks of manufacturing was the first since 1963. In non-durables, there was a swing from a noticeable accumulation to a significant liquidation, whereas in durables the third quarter liquidation deepened further in the fourth quarter. Though the major part of depletion in the stocks of manufacturers took place among durables, the turnaround was much sharper among non-durables. In durable goods-producing industries, the declines were general with the exception of the transportation goods-producing industries where there was a considerable accumulation. Among non-durables, the movements were mixed. A small amount of accumulation in tobacco, textiles, and paper industries was largely offset by a liquidation in the food, leather, clothing, petroleum and chemicals producing industries. There were declines in the stocks at every stage of processing. With new orders increasing more than shipments, the result was a backlog of unfilled orders. The stock-to-shipments ratio was lower than in the previous quarter.

Investment at the wholesale level showed a moderate accumulation which was entirely concentrated in the hands of durable goods dealers. Though there was a modest accumulation in the stocks of groceries, stocks of non-durable goods dealers declined somewhat. The stock-to-sales ratio was a little higher than in the previous quarter.

At the total retail level, investment in inventories showed no increase at all – a large and widespread build-up in the stocks of durable goods was offset by an equal liquidation in those of non-durable goods. Among durables, the major strength came from the stocks of motor vehicle dealers. Disinvestment in the stocks of non-durables was general with the exception of stocks of food which showed a fractional increase. The stock-to-sales ratio for the current quarter was higher than that of the previous quarter.

With exports of goods and services rising by 3 per cent and imports declining by about 1 per cent, the deficit on external account narrowed by $584 million. This net change in the overall balance of trade reflected an improvement of $1,388 million in merchandise and a deterioration by $804 million in non-merchandise trade.

Exports of goods rose almost 11 per cent. Lower shipments of wheat and lumber were offset by higher shipments of fish, iron ore, aluminum, copper, nickel, zinc, natural gas, asbestos, newsprint, fertilizers, primary iron and steel, steel bars-rods-plate, non-farm and farm machinery. Part of the 2 per cent drop in imports was due to the current quarter decline in investment outlays, particularly machinery and equipment.

Most of the deterioration in the services account resulted from sharply reduced tourist and travel receipts with the closing of Expo in October.

Exports and Imports of Goods and Services

Seasonally adjusted, at annual rates, in millions of dollars

The Government Sector

Seasonally adjusted at annual rates, total expenditures of all governments combined (excluding intergovernmental transfers) rose by $996 million to a rate of $22,092 million. Higher outlays on goods and services, particularly at the provincial-municipal level, accounted for almost half the increase. An increase of similar size occurred in transfer payments, again mainly at the provincial-municipal level, partly associated with higher education and adult training grants.

Total revenues rose by $484 million to a rate of $22,032 million. Most of the increase resulted from higher returns from personal direct taxes, and was divided fairly evenly between the federal and provincial governments. Indirect taxes rose by $148 million, partly because of higher sales tax revenue from a higher volume of sales, especially at the provincial level.

With expenditures rising more rapidly than revenues, the government sector as a whole moved from a surplus, on a national accounts basis, of $452 million in the third quarter to a deficit of $60 million in the fourth quarter. Most of this change resulted from movements at the provincial-municipal level, where the deficit showed a sharp increase from $236 million to $676 million. The federal deficit increased somewhat, from $208 million to $296 million, while the surplus of the Canada and Quebec Pension Plans showed little change.

Components of Income

In the fourth quarter of 1967, labour income rose by slightly more than 1 per cent. This was lower than the rise in the second and third quarters of 1967, and less than half as large as the quarterly increases recorded throughout 1966 and the first quarter of 1967. The lower rate of increase was partially due to a reduction in employment in the goods-producing industries, although the rise in payrolls in the service-producing sector was also lower than that recorded throughout 1966 and the first three quarters of 1967.

In the goods-producing sector, total labour income increased slightly. This was almost entirely accounted for by increased earnings since declines in employment were recorded. In manufacturing, a slight increase in hours worked and continuing increases in average hourly earnings were partially offset by a decline in employment, resulting in a small increase in total payrolls. In the primary industries, wages and salaries rose by slightly more than 1 per cent after a decline during the third quarter and a slight increase in the second. Construction payrolls declined for the third successive quarter.

The service-producing sector showed an increase in total wages and salaries of almost 2 per cent. Employment increased in all components except transportation and other utilities. The largest relative gains in labour income were recorded in public utilities, governments and service.

Net corporation profits advanced by 1.5 per cent in the fourth quarter to return to the level of the second quarter of 1966. This increase was related to a 5 per cent decline in capital consumption allowances; on a gross basis, profits dipped by 1 per cent.

By industry, net profit gains were recorded in all but four categories. The industries experiencing advances were mining with a 6 per cent increase in profits, manufacturing, 7 per cent, transportation, storage and communication, 5 per cent, and wholesale trade, 4 per cent. Profits in retail trade, service, and utilities slipped 24, 18, and 3 per cent respectively, whereas the profits of the finance industry dropped 1 per cent.

Within the manufacturing group, profits of a majority of industries mounted. Improvements of over 10 per cent were registered in the rubber, textile, chemical and electrical industries, while more moderate rises occurred in the wood, petroleum and coal and metal industries. Profits held steady in the printing and publishing group, but declined in the food and beverage, paper and non-metallic minerals industries.

Rent, interest and miscellaneous investment income rose by $96 million or just over 2 per cent from the level of the third quarter, on a seasonally adjusted basis.

Accrued net income of farm operators from farm production declined by 2.5 per cent from the level of the previous quarter. Much of the decrease occurred in the value of grain production, due mainly to the unusually low level of profits of the Canadian Wheat Board reflecting declining exports.

Net income of non-farm unincorporated business fell slightly below the third quarter level to $3,316 million, seasonally adjusted at annual rates. Mixed movements occurred, but most significant were declines in retail trade and service.

LABOUR FORCE (More detail in Table 19)

TOTAL LABOUR FORCE AND EMPLOYMENT WERE SLIGHTLY LOWER IN MARCH, WHILE UNEMPLOYMENT MOVED UP. UNEMPLOYMENT WAS 4.7 PER CENT OF THE LABOUR FORCE.

		total labour force	total employed	employed non-agriculture	unemployed	unemployment rate	not in the labour force

---

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. [2] Includes logging, fishing, trapping and hunting. [3] Includes mechanical and construction. [4] Includes a small number in non-specified occupations. [5] Does not include students entering Canada on students' visas. [6] Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force. **Source: Quarterly Bulletin, Department of Manpower and Immigration.**

---

[1] Includes change in farm inventories. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for withdrawals of grain from farm stocks and the change in livestock items. Because of arbitrary elements, too precise an interpretation should not be given to the series. [2] Includes residual error of estimate. **Source: at bottom of Table 12.**

---

[1] Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. [2] The labour force as a percentage of the population 14 years of age and over. [3] The unemployed as a percentage of the labour force. **Source: Labour Force Bulletin, (71-001), D.B.S.**

[1] See footnote 1, table 19. Labour force obtained as the sum of employed and unemployed from tables 21 and 23. [2] Canada totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page S-1. These differences are small and are due to a statistical discrepancy. **Source: The Labour Force, (71-001) D.B.S.**

---

[1] In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage is not included.

[2] The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; the total, however, includes all work stoppages. The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately; should strikes occur in these industries, they also will be shown in the total.

[3] Includes miscellaneous manufacturing industries.

[4] Includes also publishing and allied industries.

[5] Includes also the storage and communication industries.

[1] The data in Tables 28 to 35 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] Excludes agriculture, fishing, trapping and public administration and defence. [3] Includes storage, electric power, gas and water utilities. [4] Excludes domestic service. **Source: Employment and Average Weekly Wages and Salaries, (72-002), D.B.S.**

[1] See footnote 1 and source in Table 28. [2] Employment indexes in total manufacturing and in its total durable and non-durable components are given in Table 28. [3] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. [4] Except machinery and transportation equipment industries.

[1] The data for the current year are subject to revision. [2] Includes gold. [3] Consists of general wholesale index less animal products and vegetable products component groups. [4] Consists of iron products and non-ferrous metals products component groups less gold. [5] These two series comprise the general wholesale index. [6] Excludes gold.

---

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. [2] Total manufacturing inventory owned by manufacturers including warehouse stocks. [3] Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. [4] End of period. Annual figures for inventories and unfilled orders are end of December values. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D. B. S.**

[1] Production of tobacco products, as indicated by the sale of excise duty stamps. [2] Includes smoking and chewing tobacco. [3] Includes smoking, chewing and twist tobacco. [4] Stocks of redried domestic and imported leaf at end of quarter. [5] The production of beer is shown in thousand barrels of 25 gallons each. [6] Includes bottling of imported liquors. Excludes rebottling and intra-industry transfers. [7] End of period; spirit stock balance remaining in bond for all Canada plus distillery stock in process of being manufactured. **Sources: Tobacco and Tobacco Products Statistics Quarterly (32-014), D. B. S.; and Department of National Revenue.**

---

[1] Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. [2] 100 cu. ft. of solid wood; pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. [3] Customs exports. [4] Mill shipments destined for export. **Sources: Pulpwood and Wood Residue Statistics (25-001), Trade of Canada, Exports (65-004), D. B. S; Bulletins of Canadian Pulp and Paper Association and Newsprint Association of Canada.**

---

[1] Data on net shipments relate to rolled steels products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. cludes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. [3] Includes appliances and nsils. Note: Some groupings are not entirely comparable to year 1964 due to change in classifications but in general the differences are minimal. [4] Excluding ipments for re-processing at maker's own plant. **Source: Primary Iron and Steel (41-001), D. B. S.**

---

[1] Barrels of 35 Canadian gallons. [2] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [3] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [4] Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. [5] Includes inventories at end of period being held at gas plants and in storage caverns. [6] Includes stove oil, kerosene and tractor fuel. [7] Includes aviation gasoline and aviation turbo fuel. [8] Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. [9] Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products. **Source: Refined Petroleum Products (45-004), D. B. S.**

---

[1] The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table, e to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally llow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable ange may develop before the completion of the operation. **Source: Building Permits (64-001), D.B.S.**

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. [2] End of period. **Source: New Residential Construction (64-002), D. B. S.**

[1] Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and Northwest Territories for which only annual statistics are collected. [2] Planks and boards, flooring and square timber. [3] Hollow blocks including fireproofing and load-bearing tile. [4] For building insulation only. [5] Figures cover the production of firms which normally account for 90 per cent of the total for Canada. [6] Factory sales of firms which normally account for 96% of total Canadian production. **Source: Concrete Products (44-002), Products made from Canadian Clays (44-005), Asphalt Roofing (45-001), Rigid Insulating Board (36-002), Iron Castings and Cast Iron Pipes and Fittings (41-004), Steel Wire and Specified Wire Products (41-006), Gypsum Products (44-003), Mineral Wool (44-004), Sales of Paints, Varnishes and Lacquers (46-001), Production, Shipments and Stocks on Hand of Sawmills (35-002), (35-003) monthly, (35-204) annual and Trade of Canada, Imports (65-007), Exports (65-004), D. Note: Components may not add to totals due to rounding. [1] The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. [2] Excluding trucks. [3] The total value of all machines shown in this table is greater than the value shown for farm machinery in Table 87 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. **Source: Farm Implement and Equipment Sales (63-009), D.B.S.**

[1] These indexes are available for January, April and August only. [2] Average rates of cash wages paid per month to male hired help on farms. They reflect the average of the wages paid to all male farm help regardless of age and skill. Data are available for January, May and August only. [3] Exclusive of Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1965 are final prices. From August 1, 1965 to date, the western grain prices used in the Index are initial prices only for wheat, oats and barley. [4] Barley No. 1 feed; hogs grade "B" alive. [5] Price of 100 lbs. good steer as a percentage of the price of 100 lbs. live hog, grade B. [6] Price of 100 lbs. good steer as a percentage of the price of 100 lbs. good lamb. [7] Quotations refer to steers of all weights. [8] Grade "B1" hogs. **Sources: Price Index Numbers of Commodities and Services Used by Farmers (62-004); Farm Wages in Canada (21-002) Occasional; Coarse Grains Quarterly (22-001), D.B.S. and Livestock and Meat Trade Report, Dept. of Agriculture.**

[1] Total value of retail trade seasonally adjusted includes department store sales, general merchandise store sales and sales of all other stores. Due to changes in definition of department stores and the introduction of general merchandise stores, formerly included in all other stores, the unadjusted data for 1968 are not comparable with the data of previous years; general merchandise store sales were $42,730,000 in January and $44,853,000 in February 1968. **Source: Retail Trade (63-005), D.B.S.**

*Credit extended mainly to individuals; includes unidentifiable amounts of credit extended for non-consumer purposes; excludes certain forms, mainly service credit extended by doctors, dentists, lawyers, pawnbrokers, travel companies, restaurants and personal credit for which no statistics are available. [1] Conditional sales agreements held in connection with the financing of retail purchases of consumers' goods and repaid in instalments. [2] Companies licensed under the Small Loans Act and affiliated compagnies engaged in making personal loans. [3] Cash loans with no conditional sales contract but usually repaid in instalments. [4] Personal loans other than those fully secured by marketable bonds and stocks and other than home improvement loans. [5] Loans other than secured loans and mortgage loans. [6] Figures for dates other than year-end are estimated on the basis of loans made by sixteen companies. [7] Sum of instalment credit of clothing, hardware and jewellery stores, fuel dealers and "all other trades" in Table 89. [8] Sum of charge accounts of clothing, hardware, independent grocery and combination stores, jewellery and general stores, fuel dealers, garages and filling stations and "all other trades" in Table 89. [9] Amount owing to oil companies ex commercial accounts. [10] Excludes mortgage loans; data available yearly only. [11] The data for Quebec savings banks loans and motor vehicle dealers are not seasonally adjusted as no seasonality is present; these series are repeated in the unadjusted form. **Sources: Credit Statistics (61-004), D.B.S.; Bank of Canada, Dept. of Insurance, Dept. of Finance and Dept. of Agriculture.**

[1] The figures in the first four columns, i.e. all countries, United States, United Kingdom and all other countries, for the period April 1966 through July 1967 have been revised to account for delays in the receipts of customs documents. The revisions have not been extended to columns of figures for other countries, and their sum differs from the revised "all other countries" and "Total Imports" shown in this table. [2] Includes Belgium, Luxembourg, France, Germany, Italy and Netherlands.

Source: Trade of Canada, Imports (65-007), D.B.S.

Table 93: merchandise exports, by commodity, based on the standard commodity classification¹ (million dollars)

[1] Column numbers refer to tables 93 and 94. [2] Includes special transaction-trade, not shown separately. [3] Includes scrap. [4] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [5] Total imports revised to account for delays in the receipts of customs documents for the period April 1966 – July 1967 are: in 1966, April (822.4), May (938.4), June (900.6), July (792.8), August (818.2), Sept. (825.6), Oct. (936.2), Nov. (961.0), Dec. (872.0) and in 1967, Jan. (873.7), Feb. (766.4), March (851.8), April (944.6), May (1,053.9), June (977.5) and July (915.8).

[1] Monthly averages for 1965 and 1966 may differ from the averages of the monthly data due to revisions which cannot be allocated by months. [2] Data in this le refer to class 1 and class 2 carriers which are railways with gross annual operating revenues of $500,000 or over. Includes operations of United States lways operating in Canada but excludes operations of Canadian railways in the United States. [3] Includes traffic interchanged between Canadian railways. **Sources: lway Operating Statistics (52-003) monthly, and (52-206) annual, D. B. S.**

[1] Includes Class I and Class II carriers only. These are trucking firms having $100,000 or more gross annual operating revenues. [4] Includes Class I carriers ly. These are carriers having $100,000 or more gross annual revenues primarily from inter-city and rural bus operations. Regular and chartered services are cluded. [3] Includes Class I carriers only. These are carriers having $100,000 or more gross annual revenues primarily from urban transit operations. Data are totals r motor bus, trolley coach, street car, subway and chartered services. **Sources: Motor Carriers-Freight, Quarterly (53-005), Passenger Bus Statistics (53-002) onthly, and Urban Transit (53-003) monthly, D. B. S.**

[1] Monthly averages for years 1965 and 1966 differ from the averages of the monthly data due to revisions which cannot be allocated by months. [2] Includes scheduled and non-scheduled carriers, groups I to IV. These groups cover all air carriers with gross operating revenues of over $60,000 annually prior to January, 1964 and over $100,000 annually since. [3] United States and other foreign carriers having scheduled services into and out of Canada. Excludes passengers in transit through Canada. [4] Cargo includes air freight and express but excludes mail and excess baggage. [5] Data prior to 1964 do not include bulk transportation. Because of survey limitations, data on bulk transportation after January 1, 1964 refer only to aircraft having a minimum authorized take-off weight on wheels in excess of 18,000 lbs. **Source: Civil Aviation (51-001), D. B. S.**

---

[1]The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does not clude failures, sales or seizures carried out under other legislation.The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, rairie provinces and British Columbia from the total. [2]In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made der this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. **Source: Commercial ailures (61-002) Quarterly, D.B.S.** *167,333 **258,935 ***108,631

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Mainly deposits of foreign banks. [3] Capital, rest fund and undivided profits as at the latest fiscal year-end. [4] Including issues payable in foreign currency. [5] Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. [6] Excluding Canadian day-to-day loans. [7] Loans to grain dealers and exporters. [8] Loans to finance purchase of Canada Savings Bonds at time of issue. [9] Total of foreign funds, short term foreign investments and other foreign currency assets less foreign currency liabilities. [10] Including loans to instalment finance companies. **Source: Statistical Summary of Bank of Canada.**

---

[1] The definition of profits before taxes is based mainly on the accounting definition used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by sample of all companies incorporated in Canada (excluding government-owned companies). [2] As is evident from the above footnote, the data reporting unit is the company; the data are therefore not entirely comparable with data where the establishment is the reporting unit. [3] Includes also the furniture and furnishings industry. [4] Includes the primary metal, the metal fabricating, the machinery and the transportation equipment industries. [5] Includes tobacco products, leather and miscellaneous manufacturing industries. [6] Includes also storage and communication industries. [7] Includes agriculture, forestry, fishing and construction. **Source: Corporation Profits (61-003), D. B. S.**

---

[1]This statement does not include any receipts other than regular budgetary revenues. Excluded for example, are all receipts arising from payments of loan and advances, or from accumulations on annuity, pension and insurance funds. [2]For comparative purposes figures may differ from those previously reported to refle changes in accounting during 1967-68. Figures are rounded and may not add to totals. [3]March includes supplementary payments arising from the closing of th accounts. **Sources: The Canada Gazette and Dept. of Finance.**

A NOTE TO USERS

Months for Cyclical Dominance (M.C.D.):

The user will find this expression in abbreviated form in several tables throughout this publication.

The measure indicates the number of months required on average for emergence of the cyclical trend from the seasonally adjusted series. An M.C.D. of five implies that a five-month moving average is required to offset irregular movements and allow examination of the underlying cyclical trend.

The M.C.D. is used in Tables 17, 18, 20, 21, 22, 23, 24, 25, 28, 29, 42, 43, 44, 45, 67, 85, 90, 91 and 92 to indicate the relative variability of the series. Its value can range from one to six months since values greater than this are not calculated. In the S-section, for series with an M.C.D. of four or more, five-term moving averages are used to aid in charting. These averages are correct for series with an M.C.D. of five, but for M.C.D.'s of four or six they are used as approximations to avoid the problem of centering even-term averages. The M.C.D. is not charted for series with values of three or less, since it does not increase the clarity of the charted series.

AUTOMATION AND STATISTICAL SERVICES[1]

Introduction

The Dominion Bureau of Statistics has been hard put to keep abreast of the demand for increased scope, detail and timeliness in the production and release of official statistics. This demand has tended to increase faster than the growing capacity of DBS to meet it. However, growth in this capacity is being accelerated through a shift in the methodology of the collection and processing of statistical information towards much greater reliance on electronic data processing equipment at all stages. These stages include the construction and maintenance of comprehensive lists of statistical reporting units, sampling from these lists where this is called for, preparing documents for mail-out to respondents and/or DBS officers in the field, control of follow-up operations on late respondents, editing and processing the incoming data and the statistical output, and the production of printed tables in a form suitable for reproduction in official publications. In addition plans are being developed for the release of data in machine-readable form, processed to user specifications.

The processing of survey data may require the computer to call in stored reference information in order to assign, for example, geographic codes to addresses or locations, or industry codes to reporting establishments. This reference material is stored in machine-readable form and requires complex computer systems for its establishment, maintenance and accessibility.

The necessity for rapid processing of incoming data is requiring a shift not only in the traditional methods of editing data from inspection by clerks for inconsistencies and unusual values to inspection by the computer but also, to a large extent, in the traditional methods of handling returns rejected or queried by the inspection process.

Increasing demands for statistical time series have led the DBS into the development of a computerized system for the large scale storage and retrieval of such series and for the manipulation and analysis of this data by fairly standard statistical techniques.

Since computer logic and computer systems are not in general as adaptable and flexible as human logic and systems involving human effort, although they are incomparably faster and less error-prone, the implementation and integration of many large computer systems require the precise, detailed, and complete documentation of all operations and very tight scheduling of these operations.

With most computer-oriented systems there is a residue of tasks, usually the more interesting and challenging ones, that cannot be handled automatically. This underlines the fact that the DBS will continue to require at least its present inputs of clerical and technical staff for the foreseeable future. However, increasing use of the computer has made economically feasible the initiation of projects that could not even have been contemplated previously.

The purpose of this article is to describe very briefly some of the new techniques under development or already introduced in the DBS and perhaps to indicate the direction of change in the collection and processing of statistical information.

Mailing Lists

In the past two to three years a number of large survey lists (or, as they are called, files) have been transferred from clerically maintained card index systems, using addressograph plates for addressing mail-outs, to systems based on magnetic tape files and direct computer printing of labels for addressing of mail-outs. The identification and data from incoming returns are transferred to punch cards and checked in against the master file. Follow-up action can then be initiated for the non-respondents. The computer's part in this action is to print out a set of address labels for all units for which it has not checked in a return. In some cases the follow-up action may depend on a number of factors such as the past reporting history of the unit, and the presence of any special arrangements for reporting made with the unit. The computer analyses these factors and on the basis of the follow-up logic supplied to it prints the labels suitably arranged in blocks corresponding to different options for action. The occurrence of errors in the identification of reporting units is kept to a very low level by the inclusion of a check digit as part of the identification number.

The records of the mailing file (also called master file) are updated for changes in status, name, address, classification, etc., prior to every mailing run of the file. Edit checks, built into the file maintenance systems, keep the error rate in updating operations to a much lower level than is possible in manually maintained systems. In a recent conversion of a large manually maintained card index file to a computer maintained tape file we were able to locate and remedy about 20,000 inconsistencies (in a file of about 350,000 records) which had crept into the file in the course of about 5 years maintenance. Since this file is subject to about 10,000 updates a month the large number of inconsistencies was not surprising and was probably about as low as one could have expected in clerically maintained systems.

The computerization of files means that much more sophisticated sampling schemes can be applied than would be feasible in manual systems even when the survey results are processed by unit record equipment or even by computer. For example, in the file referred to in the preceding paragraph, which is used as the sampling frame for the monthly employment survey of small establishments, a scheme of sample rotation has been introduced which, at the same time that it lightens the burden on the individual respondent, facilitates the use of a more effective estimation product in producing statistics from the survey. The resulting increase in statistical efficiency provides a choice between a reduction in sample size for the same level of quality, or maintaining the same sample size with an increase in accuracy of the statistics produced.

---

[1] Prepared in the Sampling and Survey Research Staff, by Mr. A.B. Sunter.

The computer does not mind working Sundays, holidays or during the night and it very seldom gets sick or takes a holiday so that we are able to work to much tighter schedules than is the case with clerical operations. On the other hand, since the computer is shared by many different sections within the DBS, or in the case of outside installations, by other departments as well as the DBS, it is essential to work to much more rigid schedules than previously. If the input for a system is not ready by the time it is scheduled to run the particular operation may lose its place and have to wait until its turn comes up again or until there is some free time put aside for just such situations — and in most installations there is less and less free time available. The necessity for tight and relatively rigid scheduling has favourable implications for the timeliness of the production of statistics. It also has certain implications for the way in which statistical survey returns are processed. This will be the subject of the next Section.

Automatic Editing and Imputation

Complete response to a mail survey by the time at which the returns are scheduled to be processed is a very rare phenomenom indeed. The scheduling is likely to be a compromise between the needs of the users of official statistics, the willingness or ability of the surveyed units to respond quickly, and the availability of resources — clerical, professional, and computer time — to process the returns. As was implied in the preceding section however, the computer is a relatively inflexible element in this schedule, at least for short term adjustments. If a processing cycle is scheduled to be run on a certain date then it must be run on that date regardless of the particular level of response or preliminary processing achieved by that date. This means that techniques have to be built into the processing system to enable it to produce statistics given virtually any level of response. In other words, it will have to make an informed guess or "imputation" for each non-respondent on the basis of whatever information about the non-respondent is available to it. The imputation may be implicit as, for example, in simply "weighting up" for non-response. In other words, if there has been a response rate of say, r% one simply weights the respondents by a factor 100/r to allow for non-response. One may get a little more sophisticated and group the survey units into "imputation groups" and weight up separately within each imputation group. The imputation groups are formed from what are believed to be units homogeneous with respect to the characteristics being measured.

Generally speaking, however, we prefer to make an explicit imputation for each non-respondent so that it can be combined as required with other units for whatever cross-tabulations are needed by the statistical programme. In many surveys, for example the census, no information is available to the system about the population other than that recorded in the survey itself. In that case, even though one makes an explicit imputation, it must be based on the assumption that the non-respondent has the characteristics and values of the average of the respondents in its imputation group. This assumption, based in turn on the implicit assumption that the respondents (or the non-respondents) are a random sample of the surveyed units, is known to be unsatisfactory in many instances. However, a growing literature on the subject has failed to suggest any suitable alternative for general application.

We are in a better position in the case of repetitive surveys such as the monthly surveys of employment and payrolls, or of current shipments, orders and inventories where we are learning to use a variety of imputation techniques in which the past history of the non-respondent unit, as well as the current reports of its contemporaries, is used to arrive at what seems to be the best estimate of what the unit would have reported. These techniques require fairly complicated calculations on vast amounts of stored data and while obviously not beyond human intelligence, since they are invented and programmed by it, they could not be performed economically by humans to meet any reasonable schedule for production.

None of the foregoing is meant to imply that the DBS is now willing to make do with response rates lower than formerly. A guess remains a guess, no matter how sophisticated it gets, and in fact one of the continuing objectives of DBS is to raise response rates in all its surveys. What is being planned in more and more surveys is to schedule a series of processing runs which will produce, say, preliminary revised and final estimates from successively higher levels of response. Thus we do the best we can as early as we can for those users who must have data early in spite of the uncertainties arising from non-response, but eliminate these uncertainties in the revised estimates for users whose data needs are not so immediate.

We have been moving more and more in the direction of the elimination of clerical editing of survey returns before input to the computer. Thus, in our latest survey processing systems, incoming documents are typically sent directly to key-punching. Editing of returns is built into the processing systems, which, in addition to the printing out of non-respondent labels or lists, apply a series of edits to the data before accepting it. If the edits lead to the rejection of data the computer is programmed to make the best use it can of the rejected data and data from accepted reports, as well as historical data, to make what seems to be the most plausible imputation. The rejected data, the data imputed to replace it, and any other data necessary for a clerical or professional review are then printed out. The computer meanwhile will have gone on to the production of tabulations. If the reviewer decides that the computer ought to have accepted the original data, that it ought to have made some other imputation than it did, or that the matter needs clearing up with the respondent, he can take whatever action is indicated before the next scheduled processing cycle. This marks a radical departure from earlier systems in which the computer, after inspection of a record, might indicate that there seemed to be something wrong with the data in the record, in which case it would not process the record further. This meant of course that all records rejected by the computer edit had to be cleared up before the system could proceed to the tabulation stage.

This departure reflects both increased attention to the scheduling of processing and growing confidence in our ability to design systems that will not only detect errors in statistical reports but also correct them. It should be emphasized that we are concerned here only with detecting and controlling errors that are large enough to affect significantly the quality of statistical output. Thus the DBS approach is fundamentally statistical in nature, since it is concerned with aggregates of records; the opportunities for "correction" of suspect data in accounting or administrative applications are obviously far fewer because the requirements in such applications emphasize accurary in the individual record.

Edit procedures usually include validity checks (for example, characters are numeric and alphabetic where they should be, codes assigned are in the set of possible codes), checks against gross errors (for example, units reported or punched as dollars when they should have been cents), internal consistency checks (for example, if occupation were coded as housewife, sex should be female), historical consistency checks (for example, number of employees reported this month should not normally differ beyond predictable limits from the number reported last month), and comparisons with units in the same imputation group. The edit logic in a computer processing system can be very long and involved and quite beyond the capacity of a clerk to carry out as a routine procedure.

The Use of Reference Files

The classification and coding of statistical data for, say, location, industry, occupation, has always involved the use of large reference files. The advent of large direct access storage devices such as magnetic disks or drums (as opposed to sequential access storage devices such as magnetic tape) has made the computerization of "look-up" operations in these reference files both technically and economically feasible. The DBS is engaged in several projects designed to take advantage of this fact. The project perhaps of most interest in the context of this article is the development of a geocoding, data storage and retrieval system. This system, the first editions of most components of which have been programmed and are operational, is designed not only to increase efficiency in coding and storing geographically referenced data but to increase the speed, efficiency and flexibility in retrieving it.

The traditional approach to the geographic coding of statistical data has been to code it to standard geographic areas (census tracts, enumeration areas, local government administration areas, etc.) chosen on the basis of their relative ease of delineation, their size relative to the intensity of geographic coverage in the survey to which they are applied, and, of course, their relevance to geographically classified data needs. The difficulty with this approach is that it is impossible to predict all of the geographic data needs that are likely to arise and that, even if this were possible, the cost of coding to meet all of these needs would be prohibitive – prohibitive, that is, unless a means can be found for coding by machine.

The objective of the system now in process of development, which is intended to apply to the coding of data for **urban** addresses in Canada, is nothing less than the automatic geographic coding of an individual address and the automatic retrieval of data aggregated to arbitrarily specified areas. The "code" assigned is the geographic coordinates of the address, expressed in the Universal Transverse Mercator (UTM) system. Since geographic areas for which needs for statistical data arise can also be expressed by the UTM coordinates of a sufficient number of points on their boundaries, the system offers the possibility of complete flexibility in the delineation of these areas. The delineation, moreover, can be made at any time subsequent to the collection of the data provided the data is suitably stored. A brief description of some of the major components of the system is given below.

The coordinates actually assigned to an individual address are the UTM coordinates of the centre of the block face (i.e. one side of a city block) in which it is located, all addresses within a block face thus receiving the same geocode. The central element in the system would be a permanently retained and continuously updated municipal street master file. This file is essentially a set of city maps in machine-readable format. The records of the file would contain the street names, address ranges, and block face centre coordinates for all block faces in every municipality included in the system. Supporting files and systems make it possible to access the master file and determine the appropriate UTM coordinates to be assigned to any urban address located in a city included in the system.

In order to perform geocoding, addresses have to be compared against the master file. The successful matching of addresses normally requires that the format and components of the records that contain them should adhere to rigid specifications. In the current jargon, the records should be fixed-format records. Since addresses will be obtained from a variety of sources and with a variety of formats an important element in the overall system is a program for decoding free-format addresses and translating them into fixed-format prior to address matching operations. In other words the computer must be able to scan an address, recognize its components (e.g. street name, street type, building name, P.O. box number, city name, province name), translate these components into their standard form and write them in the space reserved for them in a fixed-format record. Inspection of a few different mailing lists reveals a large variety of address types and formats and shows that the task of machine decoding is not an easy one. A programme, called MADHOUS, developed by the DBS Central Programming Staff has the ability for very fast decoding of addresses with a success rate between 70 per cent and 92 per cent. The addresses which MADHOUS has been unable to decode would be subjected to an attempt to decode them by another programme, slower than MADHOUS but using a completely different programme logic. Finally, addresses that have baffled both programmes would be decoded by clerks.

While the geocoding system can be applied to any survey or census in which urban addresses require coding to geographic location it is designed primarily for the geocoding and storage of population census data. It will be readily appreciated that the storage and manipulation of census data for, say, 12,000,000 urban residents of Canada presents some very difficult problems. The 1961 Census required about 60 reels of magnetic tape for this purpose and, had address been included, this would have been increased to about 100 reels, Since tape is of course a sequential storage device the provision of even limited tabulations has, in many cases, required that all 60 tapes be searched (read sequentially from beginning to end) in order to locate the data to be included in the tabulation and the cost, as a result, of meeting many legitimate needs for small areas has been prohibitively high.

Ideally the census data file should be stored on a direct access storage device (random access) and, since the time required for reading a record depends on its length, should be stored in variable-length format. Finally, the time required for locating, reading, and processing the records for most tabulations would be very significantly reduced if only those parts of the record required for the tabulations had to be accessed, read, and processed. For example, if only 5 out of 100 or so characteristics recorded for each unit in a file are required in a certain tabulation, it would be efficient if these characteristics could be located directly and without having to process the whole record. Storage techniques designed to facilitate this are being explored.

Regardless of the particular design that will be followed for the storage of Census data the expectation is to provide the user with the facility, subject to confidentiality restrictions and cost considerations, to obtain tabulations for arbitrarily specified polygons. The user would simply outline on a map the areas for which statistical tabulations are required. These areas would then be described by the UTM coordinates of a sufficient number of points on their boundaries. Once supplied with these coordinates the computer would then obtain from reference files in the system the coordinates of all block face centres that fall within the area and the statistical data for the required characteristics for all units (persons or households) geocoded to those block face centres. After data retrieval, sample weighting where required, and confidentiality testing, the tabulations could be performed and printed out or written on tape or other auxiliary storage devices for transmission to the user.

Special files of areas described by the coordinates of points in their boundaries for standard, frequently requested areas would be retained permanently. There files permanently record the coordinates of all block face centres within the specified, areas. Since it would be unnecessary to repeat the operation which obtains the block face centres each time such an area is requested these files should speed the turn around time for requests and produce the required information at lower cost.

This brief description of the geocoding project has been included as an example of one of the ways in which it is expected that automation will significantly improve the efficiency not only of the initial processing of very large volumes of survey returns but also all subsequent manipulation of the data.

Conclusion

Although this article has dealt very briefly with some aspects of computer usage, efforts to improve efficiency, particularly with respect to the timeliness of DBS publications and the provision of special purpose tabulations, are being accompanied by the effective utilization of more conventional procedures. These include improvements in the documentation and management of work flows, increased reliance on the telephone in follow-up operations, and tighter scheduling of operations, such as printing, peripheral to DBS activities. More sophisticated and efficient sample designs are making the reduction of sample sizes possible in some cases with a resulting reduction in workload.

The DBS is engaged at present in acquiring a new computer and will soon be subject to all the problems involved with its installation and the conversion of existing programmes. The new computer will both facilitate and demand the kind of methodological changes discussed in this article.

INDUSTRIAL PRODUCTION (More detail in Table 16)

THE INDEX OF INDUSTRIAL PRODUCTION ROSE BY 0.4 PER CENT IN MARCH. THE GAIN ORIGINATED IN BOTH MANUFACTUR AND MINING, AS ELECTRIC POWER AND GAS DECREASED. WITHIN MANUFACTURING, INCREASES WERE CONCENTRATED IN NON-DURABLES, AS DURABLES DECLINED.

		total industrial production (1949=100)	manufacturing (1949=100)			(1949=100)

[1] Department store sales are not available due to definitional changes in January 1968.

CONSTRUCTION (More detail in Tables 67, 72 and 73)

THE VALUE OF BUILDING PERMITS DECREASED SHARPLY IN MARCH FROM THE IRREGULAR HIGH LEVEL IN FEBRUARY. DECLINES IN NON-RESIDENTIAL PERMITS WERE MORE PRONOUNCED THAN IN RESIDENTIAL PERMITS.

HOUSING STARTS DECLINED AGAIN IN APRIL, WHILE COMPLETIONS AND UNITS UNDER CONSTRUCTION WERE HIGHER.

		value of building permits			new dwelling construction, centres 10,000 and over		
		total	non-residential	residential	starts, total	completions, total [1]	under construction thousand units, end of month
		million dollars			thousand units at annual rates

---

[1] Gross National Product at market prices excluding accrued net income of farm operators from farm production. [2] Before dividends paid to non-residents; see also footnotes on Table 113. [3] Total of all monthly and quarterly series as in column 14, Table 90. [4] Seasonally adjusted figures for this series do not incorporate revisions to the original data in table 75.

PRICES (More detail in Tables 37, 38, 39, 93, 94 and 114)

THE GENERAL WHOLESALE INDEX AND THE THIRTY INDUSTRIAL MATERIALS INDEX WERE LOWER IN APRIL.

THE INDEX OF INDUSTRIAL COMMON STOCKS ADVANCED STRONGLY IN APRIL, REVERSING THE DOWNWARD TREND OF THE PREVIOUS TWO MONTHS.

THE CONSUMER PRICE INDEX CONTINUED TO MOVE UP IN APRIL. ALL COMPONENTS CONTRIBUTED TO THE ADVANCE.

---

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary vidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census f Canada, 1961, Catalogue Number 12-506. [2] Includes logging, fishing, trapping and hunting. [3] Includes mechanical and construction. [4] Includes a small number in on-specified occupations. [5] Does not include students entering Canada on students' visas. [6] Includes also retired persons, elderly dependents, fiancés or fiancées nd other unspecified persons not intending to enter the labour force. **Source: Quarterly Bulletin, Department of Manpower and Immigration.**

---

[1] Includes change in farm inventories. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for ithdrawals of grain from farm stocks and the change in livestock items. Because of arbitrary elements, too precise an interpretation should not be given to the eries. [2] Includes residual error of estimate. **Source: at bottom of Table 12.**

---

[1] Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. [2] The labour force as a percentage of the population 14 years of age and over. [3] The unemployed as a percentage of the labour force. **Source: Labour Force Bulletin, (71-001). D.B.S.**

[1] See footnote 1, table 19. Labour force obtained as the sum of employed and unemployed from tables 21 and 23. [2] Canada totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page S-1. These differences are small and are due to a statistical discrepancy. Source: The Labour Force, (71-001) D.B.S.

[1] In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage is not included. [2] The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; the total, however, includes all work stoppages. The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately; should strikes occur in these industries, they also will be shown in the total. [3] Includes miscellaneous manufacturing industries. [4] Includes also publishing and allied industries. [5] Includes also the storage and communication industries. **Source: Labour Gazette, Department of Labour.**

*Revised monthly data will be available later.

[1] The data in Tables 28 to 35 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] Excludes agriculture, fishing, trapping and public administration and defence. [3] Includes storage, electric power, gas and water utilities. [4] Excludes domestic service. **Source: Employment and Average Weekly Wages and Salaries, (72-002), D.B.S.**

[1] See footnote 1 and source in Table 28. [2] Employment indexes in total manufacturing and in its total durable and non-durable components are given n Table 28. [3] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included n non-durable manufacturing. [4] Except machinery and transportation equipment industries.

[1] The data for the current year are subject to revision. [2] Includes gold. [3] Consists of general wholesale index less animal products and vegetable products component groups. [4] Consists of iron products and non-ferrous metals products component groups less gold. [5] These two series comprise the general wholesale index. [6] Excludes gold. **Source: Prices and Price Indexes (62-002), D. B. S.**

---

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. [2] Total manufacturing inventory owned by manufacturers including warehouse stocks. [3] Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. [4] End of period. Annual figures for inventories and unfilled orders are end of December values. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D. B. S.**

[1] Production of tobacco products, as indicated by the sale of excise duty stamps. [2] Includes smoking and chewing tobacco. [3] Includes smoking, chewing and twist tobacco. [4] Stocks of redried domestic and imported leaf at end of quarter. [5] The production of beer is shown in thousand barrels of 25 gallons each. [6] Includes bottling of imported liquors. Excludes rebottling and intra-industry transfers. [7] End of period; spirit stock balance remaining in bond for all Canada plus distillery stock in process of being manufactured. **Sources: Tobacco and Tobacco Products Statistics Quarterly (32-014), D. B. S.; and Department of National Revenue.**

---

[1] Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. [2] 100 cu. ft. of solid wood; pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. [3] Customs exports. [4] Mill shipments destined for export. **Sources: Pulpwood and Wood Residue Statistics (25-001), Trade of Canada, Exports (65-004), D. B. S; Bulletins of Canadian Pulp and Paper Association and Newsprint Association of Canada.**

---

[1] Data on net shipments relate to rolled steels products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [2] Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. [3] Includes appliances and utensils. Note: Some groupings are not entirely comparable to year 1964 due to change in classifications but in general the differences are minimal. [4] Excluding shipments for re-processing at maker's own plant. **Source: Primary Iron and Steel (41-001), D. B. S.**

[1] These totals include all generating agencies producing over ten million kilowatt hours per year. [2] These columns include all generating utilities and generating industries respectively, producing over ten million kilowatt hours per year. [3] Less imports. [4] Total net generation less net exports. **Source: Electric Power Statistics, (57-001), D. B. S.**

---

[1] Barrels of 35 Canadian gallons. [2] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [3] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [4] Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. [5] Includes inventories at end of period being held at gas plants and in storage caverns. [6] Includes stove oil, kerosene and tractor fuel. [7] Includes aviation gasoline and aviation turbo fuel. [8] Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. [9] Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products. **Source: Refined Petroleum Products (45-004), D. B. S.**

---

[1]The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. **Source: Building Permits (64-001), D.B.S.**

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. [2] End of period. **Source: New Residential Construction (64-002), D. B. S.**

[1] Cash receipts from farming operations excluding supplementary payments. Excludes Newfoundland. [2] Represents participation payments made by the Canadian Wheat Board direct to producers on crops delivered in previous years. [3] Includes rye, flaxseed, rapeseed, soybeans and corn. [4] Includes clover and grass seed, hay, clover, greenhouse products, mustard seed, sunflower seed, hops, dry beans and dry peas and miscellaneous products. [5] Made under the authority of the Agricultural Stabilization Act. **Source: Farm Cash Receipts (21-001), D. B. S.**

Note: Components may not add to totals due to rounding. [1] The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. [2] Excluding trucks. [3] The total value of all machines shown in this table is greater than the value shown for farm machinery in Table 87 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. **Source: Farm Implement and Equipment Sales (63-009), D.B.S.**

---

[1] These indexes are available for January, April and August only. [2] Average rates of cash wages paid per month to male hired help on farms. They reflect the average of the wages paid to all male farm help regardless of age and skill. Data are available for January, May and August only. [3] Exclusive of Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1965 are final prices. From August 1, 1965 to date, the western grain prices used in the Index are initial prices only for wheat, oats and barley. [4] Barley No. 1 feed; hogs grade "B" alive. [5] Price of 100 lbs. good steer as a percentage of the price of 100 lbs. live hog, grade B. [6] Price of 100 lbs. good steer as a percentage of the price of 100 lbs. good lamb. [7] Quotations refer to steers of all weights. [8] Grade "B1" hogs. **Sources: Price Index Numbers of Commodities and Services Used by Farmers (62-004); Farm Wages in Canada (21-002) Occasional; Coarse Grains Quarterly (22-001), D.B.S. and Livestock and Meat Trade Report, Dept. of Agriculture.**

---

[1] Total value of retail trade seasonally adjusted includes department store sales, general merchandise store sales and sales of all other stores. Due to changes in definition of department stores and the introduction of general merchandise stores, formerly included in all other stores, the unadjusted data for 1968 are not comparable with the data of previous years; general merchandise store sales were $42,730,000 in January, $44,853,000 in February and $53,768,000 in March 1968.

[1] Department store stocks at end of period at selling value. The sales and stocks data are revised series based on the results of the 1961 Census of Merchandising and Service Establishments. [2] Due to changes in definition of department stores and the introduction of general merchandise stores, formerly included in all other stores, the 1968 figures are not comparable with the data of previous years. **Source: Department Store Sales and Stocks (63-002), D. B. S.**

Table 87: value of wholesale trade[1], based on the 1948 standard industrial classification (million dollars)

monthly averages or months	total all trades	foods	clothing, footwear and textiles	drugs and sundries	electrical appliances	farm machinery	coal and coke	hardware	building materials	industry and transport machinery	auto parts and equipment	newsprint and paper products	tobacco and confectionery

*Credit extended mainly to individuals; includes unidentifiable amounts of credit extended for non-consumer purposes; excludes certain forms, mainly service credit extended by doctors, dentists, lawyers, pawnbrokers, travel companies, restaurants and personal credit for which no statistics are available. [1]Conditional sales agreements held in connection with the financing of retail purchases of consumers' goods and repaid in instalments. [2]Companies licensed under the Small Loans Act and affiliated compagnies engaged in making personal loans. [3]Cash loans with no conditional sales contract but usually repaid in instalments. [4]Personal loans other than those fully secured by marketable bonds and stocks and other than home improvement loans. [5]Loans other than secured loans and mortgage loans. [6]Figures for dates other than year-end are estimated on the basis of loans made by sixteen companies. [7]Sum of instalment credit of clothing, hardware and jewellery stores, fuel dealers and "all other trades" in Table 89. [8]Sum of charge accounts of clothing, hardware, independent grocery and combination stores, jewellery and general stores, fuel dealers, garages and filling stations and "all other trades" in Table 89. [9]Amount owing to oil companies ex commercial accounts. [10]Excludes mortgage loans; data available yearly only. [11]The data for Quebec savings banks loans and motor vehicle dealers are not seasonally adjusted as no seasonality is present; these series are repeated in the unadjusted form. **Sources: Credit Statistics (61-004), D.B.S.; Bank of Canada, Dept. of Insurance, Dept. of Finance and Dept. of Agriculture.**

[1] The figures in the first four columns, i.e. all countries, United States, United Kingdom and all other countries, for the period April 1966 through July 1967 have been revised to account for delays in the receipts of customs documents. The revisions have not been extended to columns of figures for other countries, and their sum differs from the revised "all other countries" and "Total Imports" shown in this table. [2] Includes Belgium, Luxembourg, France, Germany, Italy and Netherlands. **Source: Trade of Canada, Imports (65-007), D. B. S.**

[1] Column numbers refer to tables 93 and 94. [2] Includes special transaction-trade, not shown separately. [3] Includes scrap. [4] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [5] Total imports revised to account for delays in the receipts of customs documents for the period April 1966 – July 1967 are: in 1966, April (822.4), May (938.4), June (900.6), July (792.8), August (818.2), Sept. (825.6), Oct. (936.2), Nov. (961.0), Dec. (872.0) and in 1967, Jan. (873.7), Feb. (766.4), March (851.8), April (944.6), May (1,053.9), June (977.5) and July (915.8).

[1] Monthly averages for 1965 and 1966 may differ from the averages of the monthly data due to revisions which cannot be allocated by months. [2] Data in this ble refer to class 1 and class 2 carriers which are railways with gross annual operating revenues of $500,000 or over. Includes operations of United States ilways operating in Canada but excludes operations of Canadian railways in the United States. [3] Includes traffic interchanged between Canadian railways. **Sources: ilway Operating Statistics (52-003) monthly, and (52-206) annual, D. B. S.**

[1] Includes Class I and Class II carriers only. These are trucking firms having $100,000 or more gross annual operating revenues. [2] Includes Class I carriers nly. These are carriers having $100,000 or more gross annual revenues primarily from inter-city and rural bus operations. Regular and chartered services are ncluded. [3] Includes Class I carriers only. These are carriers having $100,000 or more gross annual revenues primarily from urban transit operations. Data are totals or motor bus, trolley coach, street car, subway and chartered services. **Sources: Motor Carriers-Freight, Quarterly (53-005), Passenger Bus Statistics (53-002) onthly, and Urban Transit (53-003) monthly, D. B. S.**

[1] Monthly averages for years 1965 and 1966 differ from the averages of the monthly data due to revisions which cannot be allocated by months. [2] Includes scheduled and non-scheduled carriers, groups I to IV. These groups cover all air carriers with gross operating revenues of over $60,000 annually prior to January, 1964 and over $100,000 annually since. [3] United States and other foreign carriers having scheduled services into and out of Canada. Excludes passengers in transit through Canada. [4] Cargo includes air freight and express but excludes mail and excess baggage. [5] Data prior to 1964 do not include bulk transportation. Because of survey limitations, data on bulk transportation after January 1, 1964 refer only to aircraft having a minimum authorized take-off weight on wheels in excess of 18,000 lbs. **Source: Civil Aviation (51-001), D. B. S.**

---

[1] Data from February 1967 onwards for net receipts include gathering and trunk lines. Prior to that date they include trunk lines only. [2] Excludes distribution systems. [3] Received from field and processing plants by transport systems. [4] Starting with 1967, operating revenues of crude oil products are no longer available separately; they are included with the crude oil operating revenues. **Sources: Oil Pipeline Transport (55-001) and Gas Utilities (55-002), D.B.S.**

[1]The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does not nclude failures, sales or seizures carried out under other legislation.The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, rairie provinces and British Columbia from the total. [2]In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made nder this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. **Source: Commercial ailures (61-002) Quarterly, D.B.S.** **258,935 ***108,631

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Mainly deposits of foreign banks. [3] Capital, rest fund and undivided profits as at the latest fiscal year-end. [4] Including issues payable in foreign currency. [5] Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. [6] Excluding Canadian day-to-day loans. [7] Loans to grain dealers and exporters. [8] Loans to finance purchase of Canada Savings Bonds at time of issue. [9] Total of foreign funds, short term foreign investments and other foreign currency assets less foreign currency liabilities. [10] Including loans to instalment finance companies. **Source: Statistical Summary of Bank of Canada.**

---

[1] The definition of profits before taxes is based mainly on the accounting definition used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by sample of all companies incorporated in Canada (excluding government-owned companies). [2] As is evident from the above footnote, the data reporting unit is the company; the data are therefore not entirely comparable with data where the establishment is the reporting unit. [3] Includes also the furniture and furnishings industry. [4] Includes the primary metal, the metal fabricating, the machinery and the transportation equipment industries. [5] Includes tobacco products, leather and miscellaneous manufacturing industries. [6] Includes also storage and communication industries. [7] Includes agriculture, forestry, fishing and construction. **Source: Corporation Profits (61-003), D. B. S.**

---

[1] The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. [2] Stocks included in the mining index are for producing mines. [3] Combines the industrials, utilities and finance common stocks. [4] Stocks included in industrial mines are for companies whose operations include smelting and refining. [5] The headings for "base metals" and "industrial mines" are not found in the Standard Industrial Classification. [6] Includes also the machinery industries (except electrical machinery) and the transportation equipment industries. **Source: Prices and Price Indexes (62-002), D.B.S.**

[1]This statement does not include any receipts other than regular budgetary revenues. Excluded for example, are all receipts arising from payments of loans and advances, or from accumulations on annuity, pension and insurance funds. [2]For comparative purposes figures may differ from those previously reported to reflect changes in accounting during 1967-68. Figures are rounded and may not add to totals. [3]March includes supplementary payments arising from the closing of the accounts. **Sources: The Canada Gazette and Dept. of Finance.**
